Saltbush Club – Supporting Members - Updated 24 January 2023

This is a constantly evolving list of supporting members of the Saltbush club. It is updated regularly as we welcome new members.

These members are everyday people who have read or heard about the objectives and activities of the Saltbush Club and have specifically requested to join in and lend their names and their voices to support the principle of bringing common sense and correct science into open and rational debate about climate, environment, energy and infrastructure.

There are currently 531 names on this list of which over 40% have professional / technical qualifications to diploma or university degree level or higher. Over 60% are experienced in business management, defence force operations, engineering and technical, geological or medical practices.

They include chartered accountants, medical practitioners, lawyers, airline pilots, defence force personnel, financial services managers, engineering, mining and manufacturing managers, real estate agents, tradesmen and technicians, computer services and IT professionals, farmers and cattle graziers, power generation and distribution engineers, geologists, local government personnel, teachers and university lecturers, transport operators, self-employed business owners, nurses, journalists, musicians, marketing and international trade.

All are concerned citizens eager to see a halt in the one-sided media reporting and have demonstrated that they are all well able to understand and see through the falsehood of many of the claims made by the climate alarmists.

****

Acklom, Brook. Vic / Castlemain

Company Director - I would be delighted to become a "Member" of The Saltbush Club and am happy for you to use my name.

I became very interested in Climate Change and all its associated rubbish after reading Agenda 21 (plus many associated articles). That was years ago and the "climate" situation has degenerated rapidly ever since. I am happy to write to politicians etc. on climate and other matters if requested.

****

Adnams, Peter. Qld

33 years working for the Defence Dept both in uniform and as a civvy, 6 years for the Qld Govt and 6 years in private enterprise.

***I have a concern about our various governments only bowing to vocal groups of uninformed agitators*.**

The most danger to the Australian environment comes from the Greens and the most disgusting lie and subsequent policy implementation came from: "there will be no carbon tax under the government I lead."

The UN and in particular its backing of the IPCC is self serving and unnecessary.

****

Aitken, Ian. Qld / Currumbin

Diploma in Aviation Firefighting.

Have lived on the planet for nearly 70 years, has the climate changed no, it still gets hot in summer and cold in winter. Droughts, floods, cyclones etc. come and go.

Am sick and tired of the climate alarmists, namely BOM, Greens, who can't see past their Lattes, politicians who have dumbed down the population and created a nanny state. I've never believed in man-made climate change and the more I read, I totally disagree with it.

****

Alchin, Barry. NSW / Sydney

BSc, Industrial Chemist. Worked across a range of fast disappearing manufacturing industries.

Climate is always changing - thank the heavens. To think that man can somehow be blamed for one blip (current cycle) beggars belief.

****

Alderson, Gordon. Vic / Ge

BE (Civil) Melb, MBA (Cranfield, UK). Worked in Project Engineering, Management, Business Development, Sales and Marketing of Explosives, General Management Small Mining Company, Executive Recruitment, Recruitment Software Development.

I am sceptical because of Garth Paltridge's presentation about 10 years ago, reading his book "The Climate Caper", political involvement in the Family First party, the Climate Sceptics Party and now involvement in the Pauline Hanson's One Nation Party.

****

Aldred, Pamela. NSW / Sydney

Entrepreneur, company director, fashion designer

I am sceptical of the climate scare because it is just a way for politicians and bureaucrats to create tax dollars, manipulate to control silly people, and scaremonger the gullible which appears most of the modern world who understand little and read nothing. It is pollution we need to reduce, climate change is a perennial natural force over which humans have no control.

****

Aldred, Michael John. NSW / Sydney

CEO - Cementaid International Group of Companies

The science is right whereas the cries of "Global Warming / Climate Change" alarmism and lying, coupled with the political and state cronyism money-grabbing is wrong.

The systemic attack on the less well off, the poor the pensioners and others less able to defend themselves from the State's plundering is in essence, anti-human, and is wrong. The sheer wastefulness to society through denial of real science and the scientific method is so very, very wrong.

The attacks on and plunder of those who produce goods and services at the optimum minimum cost to the consumer, in free and unfettered trade to each party's mutual advantage, is wrong.

****

Anderson, Ken.

Happy to join up with the other Saltbush club members to add weight to the numbers to support actual science by way of the scientific method. I am happy to have my former occupation listed as retired police investigator with a life- long interest in weather, particularly that to do with cyclic weather patterns that appear in our Australian Weather history.

****

Anderson, Kris. NSW / Wollongong

Associate in Accountancy/Business management, an ADF Cadet, and a Regional area Sales Manager with strong interest climate related sciences, medicine, politics, Environment, law and Economics.

I understand CO2 is the basis for life. This is year 3 science yet it is not taught to children in schools in science classes - instead, photosynthesis is taught in geography! If I need a qualification, for $750 and 72 hours study I can become a Climate Scientist on paper. I laughed at that but hey, if that's what is needed to call myself a qualified scientist to take the fight up to them, then, as sure as the sun shines every day, I will do it.

I do not and never have believed in the climate scam, I have felt this way since I was a child when schools started to teach the hole in the ozone layer, it made absolutely no sense to me that radiation could get into the Earth's atmosphere via the hole but heat could not escape, I was 9 at the time. I was lucky to be one of 5 generations alive at the same time – the gift of living with those generations was intimate knowledge about our beautiful country and many events of the past. I also understand fully indigenous/western land management and correct environmental techniques. At no stage in life have I ever believed the AGW fraud.

In brief, I have not and never will believe anything that comes from the IPCC, they are frauds, the science is far from settled. I am probably more qualified than those who claim to be the 97% of "self-identified" scientists to speak out about climate change (which has been changing since the dawn of time). It is pure arrogance to believe that man could change the climate. The policies stemming from this so called "science" is nothing short of genocide, I never thought I would see the day that people would be so stupid they would not only advocate, but fight for genocide! Women still to this day, are dying during childbirth in 3rd world countries because they don't have access to the basic necessities of life which have been provided in first world countries for decades. All because the world bank refuses to loan money to these poorer countries if they are going to build a coal-fired power station.

"There is no evidence that man is impacting the climate, the Earth is not flat, the sun is a driving factor of heat, to omit the sun and input the earth as flat

into the climate models is fraudulent and the science that comes from such practice should be exposed and dismissed. CO2 is good for you!"

"The only thing necessary for the triumph of evil is for good men to do nothing." — Edmund Burke

****

Anthes, Brett.

Engaged at Springvale Colliery as a Colliery Deputy and have so for many years - I have seen my community eaten away by environmental factors surrounding us, my kids getting brainwashed and opportunities for them vanish and cost of living go through the roof .

When I left school all kids who applied themselves could get a job as an apprentice at the power stations, mines, small arms factory, railway workshops or cement works, all up the intake was around 80 jobs, now it's around 8. Coal is the lifeblood of our area and I see it as a means to lift life from poverty, so why should and my kids made to feel bad about it? I've known for a long time this climate change debate does not add up and Australia our country is a land of extremes. People such as yourselves and the likes of Dick Smith are a breath of fresh air to this debate and I would like to help where I can.

****

Apgar. William (Jack). WA

BS Mathematics (Minor Physics) University of Texas, MS Civil Engineering (Coastal and Ocean Engineering) Texas A&M University (graduation with honours).

Maritime Research Center Galveston Texas, Deepsea Ventures Virginia USA, RJBA International Consulting firm designing offshore pipelines worldwide and IR&D large (380 tonnes) seabed pipeline trenching machines, Forensic Engineering practice Perth WA. MY designs have won national and international design awards.

I am sceptical of the climate scare because I value the truth. I am a truthful person. It has enhanced my career. It is a necessary part of science and engineering. I researched the climate change issue so that I could feel informed. It quickly became clear to me that not everyone involved even has an ability to tell the truth. The issue appears to have been hijacked by liars and opportunists.

I have almost finished the book by John Happs and am blown away by its:

1. ***Depth of knowledge on the subject. Wow!***
2. ***The mass of hard data, graphs etc. Again, wow!.***
3. ***Readability***
4. ***Identification of the villains.***
5. ***Consistency with numerous other credible sources on the subject which I have read.***

A friend heard John speak at his probus group where he bought the book which he then loaned to me. I would love to hear John speak to our Probus group and would certainly buy my own copy of his book.

****

Arnott, Andrew. NSW / Sydney

MBA - Managing Director Construction Industry

I believe that everything to do with the environment is cyclical and to date I have seen no clear independent non-disputable evidence that we are not just currently experiencing a normal climatic cycle.

****

Ashmore, Mara. NSW / Sydney

BA engaged in International Freight business.

In the 4.5 billion years since planet earth came into being, it has changed from a gaseous hunk of volcanic molten rock with temperatures around 1900°C, to the lush and temperate planet of today. Do I believe in climate change, of course. Do I think that human or any other form of animal or plant life has anything to do with it, definitely not. In ancient times, the Greeks used to say that they whom the gods wish to destroy, they first send mad. It really is time for those of us who have managed to retain our sanity to start to fight back.

****

Aston, John. NSW / Tenterfield

Cert. Physics, Electrical/Electronic and Communication Certs., Assoc. Diploma Electrical and Mechanical Engineering, Diploma Electrical and Mechanical Engineering, Diploma Teaching, Degree Education.

Engaged in Apprenticeship Electrical/Electronic Technician, Aeronautical Industry, Construction Industry, Electrical Engineering Services, Generation and Distribution, Self Employed Licensed electrical Electrician/Contractor, Technical Teacher in Electrical/Electronic Engineering.

I had a 50 year career in Electrical Engineering. This has included being an Electrical Contractor and a Technical Teacher with an in-depth knowledge of electrical power production, distribution and consumption. This career has enabled me to analyse and conclude the pros and cons for both base load power generation and the subsidised renewable power generation and subsequent essential storage systems.

The variability of solar radiation from the sun i.e. solar flares, etc, has a measurable effect on the earth's heating and cooling cycle, as well as communications. Geology, fossils and ice core sampling clearly indicate the earth's natural climate is variable and chaotic. Whether you burn non renewables or take energy out of the system by solar, water or wind power conversion techniques, the CO^2 production by coal, gas or oil is only one small effect on overall climate change.

If you consider that the average distance from the earth to the sun is $149.6x10^6$ km and the sun's diameter is $139.2x10^6$ km, our relative closeness to and size of the sun is obviously the main cause for natural climate variability.

Population growth and the need for more energy sources, food, water, space, etc is a far more important topic on the earth's present sustainability.

****

Atkins, Gary. SA / Coober Pedy

School teacher, folksinger, opal miner, driver, author of "Thank You, Lord".

Part of my training as a school teacher was in the subject of Geography, which included a study of climate, and climates. For me it is easy to see that the proponents of 'climate change' are very clever deceivers.

****

Atkinson, John. Qld / Gold Coast

Farming, Fuel Distribution, Horticulture, Mining ,Waste Management, Developer, Training.

Why am I sceptical of the climate scare: I just read and listen, and I have lots of life experience.

****

Atkinson, Betty. Qld / Proserpine.

Registered Nurse. Business Owner and Brahman Stud Cattle producer

I am sceptical of the climate scare because Carbon Dioxide is necessary for trees / plants / grass to grow - the trees then convert it in to Oxygen. This is basic knowledge.. and this O2 is required for us to breathe.

I live in the tropical Qld coast. Now 30+years and we manage our pastures very well so our stud cattle are always fat and healthy. We have put in improved pastures- but they need lots of CO2 to grow well. I rest my case.

****

Bade, Robin. Qld / Gold Coast

PhD Economics (ANU) - Academic Scotland and Canada and textbook author.

I am sceptical of the climate scare because climate variation is not new - to reduce the variation we need new technology, not demonstrations and political actions with no ideas. When I was a school girl in Rockhampton, I remember seeing in the Sunday Mail photos of people on St Kilda beach when it was 104F while in Rockhampton it was only 90F. I remember a week when I was at ANU when it was 118F.

****

Bailey, Bruce John. Tas

Sydney Grammar School HSC, Numerous Management and business accounting courses, database programming and business software. Over 35 years as founder, owner & operator of Removals & Storage Company in Sydney

As a young Uni student I supported the usual movements anti-Vietnam War, anti censorship etc. Such movements were appropriated by those who consider themselves "leftists or progressives". To me they are virtue

signalling corporate types, careerists who have appropriated a leftist badge and post-modernist ideologies to ensure job security and peer approval.

I was fortunate to receive enough education to learn how to think and understand to be suspicious when I was told what to think. I am a fierce defender of freedom of speech and understand that science is more about questioning than accepting orthodoxy.

I believe the privileges so hard fought for and won by our forebears are not guaranteed and need to be fought for each generation.

I want to pass on the enlightenment ideals to the next generation. They are relentlessly subjected to group think by main stream media and even more insidiously "re-educated" by the their teachers and Google et al.

Most of all I am incredibly angry that I have been lied to by those who have been placed in positions of trust.

****

Baker, Geoffrey. NSW

Wool Classing, Licensed Stock and Station and Real Estate Agent. Worked in the Agricultural Industry as a Stock and Station Agent in 25 different locations throughout NSW and Vic.

********** ***I am sceptical of the climate scare because while every year is different, I believe this summer was no hotter than when I was growing up in Albury and I am still waiting for the sea water to come lapping over our hills.***

****

Baker, Scott. NSW / Western Sydney

Diploma in International Trade Management, engaged in banking specialising in manufacturing & export.

The climate scare is a deliberate strategy to replace productivity & wealth in Western countries with perpetual consumption & debt.

****

Baldwin, Tony. Qld / Brisbane

BA/LLB (hons),Solicitor of the Supreme Court of Queensland. Partner in a large Commercial Law firm.

My scepticism is based on what I have read and more largely on the character and qualities of the persons and groups who are the "spear carriers" for the climate alarmist cohort.

****

Ballard, Dianne. NSW

Business Owner

****

Banner, Len.

I am very interested and I have written several papers on matters that do concern me and I am happy to spread the Saltbush club beyond the city limits

(pardon the Pun, if you remember Tina Turner - the difference being she was referring to Nut bush).

****

Baris, Costa. NSW / Terrigal

Dip. Financial Services - own Financial Services.

I am sceptical of the climate scare because I don't believe humans have the capacity to have an impact on this giant planet we are hitching a ride on for a short period of time. I think that the sun and the tilt of the earth has the ultimate last say as far as our temperatures go, not some fear mongering little girl or the left wing NWO and the UN wants us to believe.

****

Barker, Brian James. Qld / Brisbane

Bachelor of Business; Master of Business Administration

Approx 10 years working overseas for a large American energy company, 6 years with a major Middle East energy company, 30 plus years working on many oil and gas projects in Australia and Asia. Most recently as Chairman of ASX listed Exoma Energy Limited - exploring for gas & oil in the Galilee Basin (appointed 2009 retired 2015); 2003 to 2011 advisor to various PNG Government owned energy companies and was the principal advisor to Petromin (owned by PNG Government) and the various PNG Landowner companies holding interests in the PNGLNG project. Chairman of Superior Well Servicing from 1992 to 2002 and currently Chairman of a private investment company.

"The claims that the science is settled are patently false. Inadequate attention is being paid to the natural climate variations that occur slowly over the millennia. These are probably the primary drivers of climate change rather than human induced CO2 emissions.

****

Barker, David. Vic

Engaged in Sales and Marketing roles and have run two smaller businesses of my own.

I have never believed in 'Climate Change' and have always been sceptical of the underlying motives of the likes of Al Gore, and Michael Mann etc together with a long standing disbelief of what has been reported over the last 10-15 years and the con of any rise of CO2 preceding a rise in temperature.

It is a huge scam to re distribute wealth and enable global control. I well remember front page news for ages back in the 60s especially in Time Magazine of an impending catastrophic cold ice age – and all the other failed predictions!!

****

Barlow, Gregory.

FCA (Fellow of the Institute of Chartered Accountants) engaged with Hall Chadwick & Co, Duesburys (Taxation Manager and Partner) and Dunlops Chartered Accountant (Founder and managing partner).

I am sceptical because mankind has 2,000++ years of recorded history while the planet is over 2 billion years old, and there are fools who pretend to know what's going on.

****

Barnett, Lowell Thomas. Florence/ South Carolina/ USA

MD degree with 5 year urology residency post med school, FACS and Diplomate of the American Board of Urology

41 years of medical practice (3 years in US Army and 38 years in private practice

In 1981 I took my 3 year old daughter to Disney World leaving home 26 December. It was 6 degrees Fahrenheit when we left and the radio promised entrance into "The next ice age" all the way to and from Orlando FL. I think the summer temperatures in South Carolina are higher than when I was a child. But I also feel there are "cycles" of atmospheric and seashore locations over several menial based on sand hills near Society Hill, SC and sand dunes outside Columbia, SC. These locations are 76 and 150 miles from current seashores in this state. I dug a well for irrigation water and found sea shells 20-100 feet down in the earth here in Florence. I own a vacation home in Garden City Beach which is just below Myrtle Beach SC. This home has been in the family for 80+ years, and the sea levels are the same as they were 50 years ago from personal experience. I believe we should be good stewards of the planet, but I see no evidence that man-made greenhouse gases have been detrimental to civilization. The planet will take care of itself in spite of cow farts and fossil fuels. Our green new deal is a political tool and academia MUST sing their song to continue receiving federal grants and literally to stay employed in woke universities. I can state categorically that it is impossible for a "man" who has one y-chromosome and one x-chromosome to become pregnant. I have just discovered your organization, and I think your opinions are realistic and most of them have been run through a bull$hit filter. Keep up the good work.

****

Barrett, Shaun J. NSW / Lismore

B.Sc(Hons.) MCOptom. The City University, London, England

Career in applied science - Optometry - the application of the sciences of physical optics, anatomy, physiology, and ocular pathology in the provision of primary eyecare.

I understand the scientific method and how it works in practice. One thing I do know with certainty is that I am absolutely outraged at what the Global Warming Deception has done to science and I want to add my name to the ranks of people fighting against it.

I recognise that the so-called Catastrophic Anthropogenic Global Warming scare is nothing but a political tool; part of a much bigger political scheme involving a U.N. plan which aims to destroy the sovereignty of individual nations. And if it succeeds, I believe individual rights and freedoms will also become a thing of the past. In fact I'm convinced we're up against the most serious threat to the wellbeing of ordinary people since The Enlightenment.

We're already seeing the death-knell of democracy, even in our own erstwhile 'lucky country'. Laws most of us want aren't enacted, while many laws we never voted for are passed through parliament quietly, without our explicit consent. The 'Global Warming Scam' - aka 'Climate Change' - is just the tip of a much bigger iceberg. I want it exposed for what it is and I want Australia OUT OF THE PARIS AGREEMENT!

****

Bartlett, Don. Vic, Illowa

Founder of BAMSTONE (suppliers of sawn stone to projects Australia and world, eg: Crown casino, Southern Cross Station, Swanston Street).

"Nobody has given definite proof of any real change in climate. When I see proof unquestionable, I would still check it."

****

Barter, Charles. SA / Adelaide

I have Marketing and Freelance Journalism diplomas and enjoy any analytical work. I have written letters to newspaper editors for years, as well as contacting radio stations on many political topics.

After reading about Man-made global warming for years, I have yet to be convinced that CO2 is the problem it is made out to be. Clearly the UN and the IPCC have a political agenda that has nothing to do with sound science.

****

Batt, Gordon. Vic

School – Haileybury College, with HSC 1970, Tertiary – Swinburne, Dip Business Studies, Mobil Oil, Marketing 1975-1995, SME – service stations etc, 1996 to present.

Like any sane person I dislike pollution. But the current climate change debate – its costs & assumptions – are another matter.

We're not scientists, but we ***are*** experienced business people with grand children, so we ***actively*** & pragmatically evaluate all available information. Personally I'm not remotely convinced by the scaremongers on Climate Change.

I am a sceptic because I know about CO2 being good for plants & planet, Astronomical orbital variables, Modelling inaccuracies, Excessive UN meddling, Politicians have no idea, Renewable $Billions wasted, Paris accord in fantasy land, etc.., etc...

****

Beardsley, Ruth.

I have an Engineering background and I can write and speak.

****

Beale, David

Ex cocky, son of cocky's, whole family history of cocky's and pioneers SA Vic, Qld NT WA. Vet, brother of Dr Ian Beale PhD Range Management Agric. ex DPI Arid Pastures Charleville and thereby associate of Dr Bill Burrows, same qualities and

similar history to my brother, and Prof Arthur Rickards, UNE Agronomist and CALM instigator.

Quote:

"Climate alarmism is a proven money grubbing, control, and population decimation AGENDA perpetration by UN-NWO world elitists, the screaming of whom, in the progressive failure of the scenario, becomes the more incessant and piercingly desperate. On all fronts".....

****

Beaumont, John & Susie. Qld / Brisbane

Owned and worked sheep and cattle property at Young, NSW, property has been in family since 1832

We are sceptical of the global warming scare because we have studied the Milankovitch Cycle of the Earth's history of climate change that shows ice ages and hot times will occur on earth whether there is life on earth or not. The difference humans make to the temperature is basically unmeasurable.

****

Begley, Garry Qld / South Maclean

Dip T, B Ed Primary School Teacher and Science Specialist teacher

The basic rule of Science is that scientific claims have to be supported by strong evidence. With regards to the climate change, global warming etc, the scare mongering claims have been based on flimsy so called evidence based on very faulty computer modelling. Many renowned climate scientists have strongly denounced these theories but unfortunately the left leaning political class and media have exacerbated the mass hysteria re climate.

Excellent shows and journalists like Jones and Co, the Outsiders, Credlin, Bolt, Chris Kenny and Paul Murray are doing their best to present an honest view re climate change etc.

The Paris agreement is absolute lunacy and the ramifications of it would be absolutely disastrous for the economic future of Australia. I fear for the future of my children and grandchildren. Hence it is wonderful to see this important lobbying organization Saltbush with its well credentialed membership and its logical, sensible philosophies starting. Consequently I would like to join and be part of this important team.

****

Bell, Phillip. NSW

Intermediate Certificate. Worked as a printer in various commercial firms then joined the TAB and rose to manage their printing and supply section supplying 4,000 outlets.

Why am I sceptical of the climate scare? As silly as it sounds, my answer is childhood memories, reading and trying to keep up with the science whilst filtering when I can the pseudo-science.

****

Bell, Graham. NSW / Elizabeth Bay

I have no scientific background, but a strong interest in the subject and am deeply concerned that the 'religion' of climate change as preached by its intolerant advocates will end up costing our economy, and indeed the world's economies dearly.

****

Bennett, Lloyd. Vic

****

Berry, Karen (Ms). QLd

Electronics Technician (ex-RAN). 9 years RAN service; 5 years electronics company manufacturing manager; 5 years fax field service technician; 4 years Boeing technical writer/editor; 3 years newspaper production manager / editor / journalist / photographer. Various other positions/roles including volunteering at Meals On Wheels, Visitor Information Centre and Rotary.

I am sceptical of the climate scare because:

- ***CO2 cannot be causing any 'damage' to the world's atmosphere because the world's vegetation NEEDS CO2 to survive and to turn that CO2 into the oxygen WE need to survive.***
- ***The climate of the world has, and will, NEVER stopped changing anyway.***
- ***Repeated catastrophic 'doom & gloom' scenarios shrieked far and wide by the UN are just ways of coercing/shaming the countries of the world to give the UN money, money and more money.***

The book 'State of Fear' by Michael Crichton explains what the UN is doing very well: Rule the world's masses with fear (even if it has to manufacture the disaster/s itself).

****

Berry, Mark. NSW / South Coast

B. Econ's, ANU - Active in the corporate world and rural small business.

While global temperatures may rise (& fall) depending on the time series selected, I've seen no evidence that human activities have (or can have) a significant effect on these changes. Statistics 101: No proof of a cause & effect.

****

Bilcliffe, Peter. WA

Farming, transport (rail), hobbies that include natures natural environments (water & forests)

I am a original Owl subscriber of the 70's and the Agenda 21 ratifications then being implemented in New Zealand & Australia. Way back then I voiced my concerns to help Joe public wake up but was ridiculed and pushed to the fringe because of my views. Many years later people are starting to see for themselves what was realised back then.

****

Bishop, Wendy. WA / Perth

Bachelor of Science, majors Geology & Earth Science; Bachelor of Applied Arts, major Art.

30 years oil industry experience as a geo-technician. Entailed quality control, loading of geologic data such as well logs, mapping and support of geologists, geophysicists and engineers. Projects ranged from Northern Michigan Reef play to Anadarko and Ohio shale gas fraccing.

Why am I sceptical of the climate? Because natural processes are far more powerful than people understand. (Grew up in Michigan....cold sucks!)

****

Bishop, Margaret. Qld / Gold Coast

The "science" of climate change is not science.

****

Black, David. WA / Kardinya

HNC Mech Eng, MBA (finance), Msc Mineral Economics, FAusIMM, FEIZ engaged in the Mining Industry production, maintenance, projects and consulting.

"The Science is not settled and never has been. The climate has always changed in cycles and always will. Attributing all the hysterical and erroneous computer forecasts to Carbon Dioxide defies basic logic and Science"

****

Black, Graeme. Vic / Patterson Lakes

Banking, Real estate and small catering business owner.

My research confirms the views outlined in The Saltbush Club. Millions of years of ever-changing climate history makes a lie of the claims of the man-made climate change industry. I look forward to reading a lot more of the articles in the Saltbush Club archives.

****

Blackwood, Peter. Qld

Born & raised sheep & cattle industry Qld & Kimberly WA, Army 25 yrs, farmer '96 – current.

I am an avid reader, critical consumer(don't lie to me). Present me with the facts and I'll reach my own conclusion, informed by well researched, objective opinion.

****

Boddeus, Kevin Qld

As a process engineer, for an Australian black coal producer, in the discipline of coal processing I have a vested interest in seeing that Australian coal remains a viable commodity and fuel source for as long as economically feasible.

I believe in climate change but I have never seen any compelling evidence that man is the main driver of that change. I'd certainly like to see more sense introduced into the debate over fossil fuels.

****

Bourke, Robert. Qld / Toowoomba

Rural Doctor (GP)

I am sceptical because the available scientific data readily disproves the greenhouse gas theory and any human influence on the global climate. I have been studying climate science for over 10 years and have mountains of data on the subject.

****

Bower, Murray J.

B. Mar. Sc.(Hons) LLB(Hons).

Very much interested in contributing

****

Boyd, Andy. Qld / Logan Village

IT Consultant

I am sceptical of the climate scare because I have been fooled too many times by The Population Bomb, Silent Spring, Peak Oil, etc. It made me research literature much more keenly and AGW turned out to be dud.

****

Bradbury, Anne. Vic / Cororooke

Qualification - the one I put in the trash bin - Social Work. Real qualification - lived and worked overseas; have lived on 3 continents, 6 countries and voted in 3 of those. I question everything.

I know someone who was on Christmas Island (Kirribatti group and it is only on the old maps and globes) where nuclear testing happened - the coral was blown out of the water in the 60's (it was written about in the Australian) and is now regrowing beautifully.

Professor Ridd wrote about this in the last fortnight in The Australian. Prof Ridd was sacked from James Cook Uni - well that is what happens when people question the dogmas of the elite. There is no stopping place when you wish to destroy the unbeliever.

****

Bradford, David. NSW / Towamba

Electronics Marine Industry and Electromagnetic Radiation and Propagation Expertise. 60 years in telecommunications, broadcasting , communications and marine electronics industries.

I have seen it all before (remember the hole in the ozone layer.) Why do the TV and Broadcasting networks both private and ABC/SBS continue to promote green energy when the total power used by the media is many gigawatts. (obtained from coal).

****

Brennan, Leone E. NSW

A degree in common sense. Doctor's receptionist and owner of several small businesses.

My grandparents were graziers in outback Roma Queensland and they lived through one of the worst times in our history, the Federation drought. That started around 1896 and peaked around 1903.....they lost everything and population back then was not yet 4 million and there was no technology as far as I know. What's changed except that our population is now around 25 million and we're surrounded with technology? I am passionate about this shocking world lie and so glad that I've found your organisation.

****

Brenner, Hermann. WA / Perth

Studied electrical and electronic engineering and IT. Industrial Electrician at power station, computer hard and software, application programming, analysis of power distribution reliability at Western Power, WA.

Why am I sceptical of the climate scare – because none of the dire predictions of the last 30 or 40 years have come to pass and a sensible discussion is simply no longer possible since it has turned into a renewable energy obsessed cult!

****

Brindley, Geoff. WA / Perth

Boilermaker, Project Manager @ Rio Tinto.

I am sceptical of the climate scare because after becoming aware of Valentina Zharkova's white paper which confirmed many of my own observations about how there had been no sea level rise since Al Gore predicted that there would not be any more snow by 2015 and the ice caps would melt. The opposite has occurred. I believe that during the Eddy minimum, food will become a memory.

****

Broadbent, Henry

As to rising tides as Nils Morner says: "Until the records show a rising trend which they haven't to date", reference to local increases short time are just scare tactics. Pacific tides vary up to 600mm depending on the el Nino / la Nina situation.

****

Brown, David. Qld

Fuel tanker driver 24 years.

I see the science is conflicting and not settled. I am father of 4 girls and 1 on the way, I want the best for them.

****

Brown, Trevor

Diploma – Civil Engineering, engaged in Local Government undertaking civil design, works & maintenance in the roads and water/sewerage areas of Councils in Qld & NSW.

Perusal of the Earth's uncensored climate history indicates that "climate change", both hotter and colder than now, has occurred in the past without the inputs of humans. Who is to say that the current temperature is the optimum? Satellite temperature data does not support the idea that the planet is dangerously warming. If Australia is really concerned about its output of CO2, we should be constructing nuclear fission power plants, which have an almost zero CO2 emission to produce electricity.

What about the variability of the earth's axial tilt and procession of the elliptical orbit around the sun (Milankovitch cycles), where the northern hemisphere will eventually have its summer season at perihelion, thereby providing the northern hemisphere with hotter summers than now and the location of the vast majority of the land-based temperature measurements? What about the variability of the Sun's output? The scaremongers ignore facts - just to blame CO2 . What of the positive evidence showing an increase in the greening of the planet attributed to the CO2 increase, as plants grow better with more CO2 . Will a warmer planet have more cloud cover which will reflect more of the sun's energy back into space?

CO2 has increased from 0.028% to 0.040% from pre-industrial times to now. Does an increased CO2 concentration of only 0.012% (120ppm) of the planet's atmosphere, really cause the earth to warm?

It appears to be very foolish to predict doom and gloom based on computer models, which themselves are based on assumptions and simplifications of the planet's climate dynamics.

****

Brown, Ken

Transport Manager

The climate has been changing since man came into existence..Climate change is a rort for fools like Gore and others to make money and the UN to take over the world.

****

Brown, Warren. NSW / Inverell

Earthmoving, construction, mining.

I am sceptical of the climate scare and wish to broaden my knowledge in this area.

****

Bruce, Euan Frazer. Qld / Cairns

BSc, Registered Professional Engineer, JP – Consulting Engineer and Business Manager

My life experience provides a background to make a balanced assessment of the " climate scare" - with a familiarity of history, both past and recent, and a familiarity with the debate around climate change, I have an understanding of the cycles of climate. In recent times I have attended several lectures given by Ian Plimmer; read and digested "climate scare" literature; read written

assessments of climate behaviour and kept abreast of relevant literature on the Internet.

In summation: On balance the opinion that I have formed is that we inhabit part of a universe that is not static and climate is a variable that humankind has almost no influence over.

****

Bryant, Neville. Vic / Gembrook

Education - the university of hard Knocks.....

I am sceptical of the climate scare because a lot of people are making a fortune from it and our industry is being sent overseas. And there's no proof that it is our fault at all.

****

Buddee, Phillip. Qld / Miami

Teacher

The climate has been changing forever. It was changing long before we showed up and it will keep changing long after we're gone. There are much bigger forces involved than people are prepared to acknowledge. We need to remind ourselves that the sun is the centre of the universe and the core is the centre of our planet. Not people. We are but a bit player in a much bigger game. Sure we need to be responsible, but we have to be balanced and reasonable. I'm sick of seeing people getting sucked in and ripped off.

****

Bullard, John Peter. NSW / Sydney

BSc Hons London (Mechanical engineering), MSc Nuclear Science Technology. Chartered Mechanical Engineer (UK), Chartered Marine Engineer (UK) FIMar Est (UK), MIMech E (UK) FCMI (UK).

Served as an engineer officer in the Royal Navy for 35 years most of the time involved with operation and design of nuclear submarines.

The climate science is not settled. Those who say so do not understand how science works.

****

Bulwinkel, Dr Kim. Qld

MBBS, FRACS (Orth), FAOrthA. Ex RAAF Medical / specialist practice regional orthopaedic surgical practice. Medico with political involvement in federal & state politics as an LNP member.

The earth is a dynamic system that has survived major changes in the biosphere much worse than that currently being purported. The issues that we have on this earth are not climate related but are due to resource use & abuse by the single greatest problem this earth faces - too many people!! When the world wakes up & understands this issue, the whole 'climate-scare' issue will disappear.

****

Bunce, Ian. Qld / Miami

Dr Ian Bunce.OAM RFD ED MB BS (QLD) FRACP FRCPA

After requisite undergraduate and postgraduate training, practiced clinical and laboratory haematology in both public and private practice. Founded with colleagues private day hospital oncology services now ICON.
Various research activities and publications in Haematology and Lymphoedema.
Medical Advisor to Leukaemia Foundation(1979 to 2002)
Army Reserve (RA Infantry) (1961 to 1984)

Forester farm(2002 to present)

OTHER. Married two children ,grandchildren
DOB 20/12/42
Still does some medical practice.

****

Burban, Bohdan (Bob). USA / Los Angeles

Assoc. Dip. App. Geol. (School of Mines & Industries, Ballarat), Exploration geologist/Environmental Geologist/Manager primarily in Australia, PNG, Canada & USA.

With respect to carbon dioxide, an understanding of geology leads to three fundamental observations:

1. Volcanism is invariably associated with voluminous emission of carbon dioxide in both sub-aerial and sub-aqueous environments. The former have been poorly documented whereas the latter have yet to be quantified, due to the unknown number of volcanic vents distributed along some 65,000 km of global tectonic rift zones.

2. Sub-aerial sequestration of carbon dioxide is carried out by terrestrial plants and animals whereas large-scale sub-aqueous sequestration of carbon dioxide is evident in the widespread global distribution of thick limestone and dolomite strata, as well as carbonaceous sediments.

3. All life on Earth is carbon-based and flourishes due largely to the process of photosynthesis.

The high-priests of hysteria would have us believe that 150 years of human industry trumps the effects of 4.6 billion years of massive, planetary tectonic forces. There is no justification for such hubris, scientific or otherwise.

http://bobburban.wordpress.com/

****

Burton, Guy. Qld / Mt Walker

Master of Defence Studies, Dips in Business Management and Business Administration. - 35 Years Military Service; Chemical, Biological, Radiological, and Nuclear Warfare/Defence Staff Officer (Advanced) Qualification; part-time grazier.

"There is an urgent need for some balance and "truth sounding" in the global warming hysteria as reported in the main stream media, and as is constantly espoused by the green zealots in the suburban "Canberra Centric Bubble".

Unfortunately, climate scare-mongering, and the demonization of coal and CO2 has become a tax payer funded industry in Australia!"

****

Butler, Malcolm. SA / Port Broughton

Born in the Australian outback. Worked in it for 17 years then moved to a country town (Port Augusta) and started up an outback road train business. In 1985 set up a heavy diesel work shop in Port Augusta which is still going.

I am sceptical about climate change because at school I was good at maths and physics and I understand how the universe works. Weather is also my hobby and through knowledge and experience I know that climate change hysteria is a complete hoax.

****

Buxton, John. Vic / Bundalaguah

Graduate of Glenormiston Agricultural College, farmer running sheep and cattle.

I am sick of being told lies by the main stream media and I can see that there is another sinister agenda behind the lies.

It is my view that a great number of people know that our country is heading in the wrong direction. They may not be able to articulate why they feel that this is the case but it is a deep-seated concern.

They are looking for some strong leadership and there is a need for a vehicle to give that deep-seated concern a voice. When it gets a voice, it will become a powerful political force.

****

Byrne, Peter. ACT

25 years service in the Department of Foreign Affairs and Trade, in Canberra and overseas, followed by a few years running my own small business franchise in the food industry employing 11 staff.

Like a lot of people, I am concerned about the direction our country is headed and I'm appalled at the level of brainwashing agenda being run through the lefties in our Education system.

****

Byrne, John. NSW / White Rock (Bathurst)

Hawkesbury Diploma in Agriculture: Manager in Qld pastoral industry (Camooweal, Charleville, Taroom, Mackay) and Forestry manager (now an advisor) in Bathurst / Oberon region.

Having spent sixty two years working in diverse rural areas and varied climatic conditions, I've experienced a multitude of climatic change - and needed to work to and adapt to the conditions presented. It would seem that the planet is possibly

within a period of 'warming' upon which a multitude of unknown factors are contributing (sunspot activity, axis of the planet, ocean temperatures, undersea volcanic activity, etc) - but to which human-induced air-pollution / activity is not the major contributing factor.

****

Catt, Brian RL. London, UK
CEng, CPhys, MBA, MCIM - experienced physicist and professional electrical engineer.

After 17 years in science I took an MBA and worked in leading the delivery of leading edge technology to market for the next 30 years, including medical imaging, scientific instruments, computing and communication, etc.

Now heavily involved in communicating the physical and economic realities of energy and climate change, what works based in measured reality.

I am sceptical of the climate scare because the theoretical science of greenhouse effect from increasing CO2 is not happening in measured fact. Simple inspection of the ice core records demonstrate that the warming we see today is not unusual in rate or duration, and certainly not exceptional within the range science has recorded. Similarly for sea level. Nothing unusual is happening.

People are being deliberately deceived with concerted propaganda they are told to believe, exploiting their ignorance of reality, and they are attacked as heretics for questioning or checking.

****

Callil, Peter. Qld / Cairns

I have an ATPL Aeroplanes and a CPL Helicopters, a Grade One Instructor Rating with Multi-Engine, IFR, and Aerobatics teaching approvals. I've held CASA approvals for Chief Pilot LCRPT Airline, Chief Flying Instructor, and Authorised Test Officer.

No tertiary qualifications from universities. Only practical experience in a variety of fields.

I grew up on a farm on the Darling Downs, and have worked on sugar cane farms around Cairns. Additional experience includes at engineering workshops, motorcycle shops construction, and other short term jobs before returning to school to qualify for acceptance into the RAAF as a cadet pilot.

That military career ended early when I got scrubbed at Point Cook, so I left to work my way through commercial training. Following that I spent 20 years in General Aviation including some time at Helimuster in the NT.

I spent a lot of time training pilots, including for QANTAS, JAL, ANA, Air Pacific, and for Malaysia Airlines in Malaysia.

For the last 11 years I've owned and operated a small insulation contracting company, only closing the doors a few months back because I saw the future, and decided I would be of more use informing others than struggling against the prevailing madness.

****

Campbell, Kim. NSW / Sydney

I studied geology at high school and in one subject with my B.E - which gave me a good understanding of astrophysical & geological time horizons and an understanding of the time scales and forces at play and an understanding of evolution as evidenced through the fossil records.

The way the climate change hoax has taken hold of our political classes, media and education institutions is a sad reflection on how technological and scientific ignorance has taken hold as education standards have dropped.

I have worked in the resources industry and agribusiness at the entrepreneurial or front end of developing new large projects. I have a great interest in the discovery and development of natural resources as a speculator and having studied economics of natural resources in my MBA.

I have found it most interesting to read knowledge Australian scientists on the climate change topic such as Ian Plimer, Bob Carter, Ian Kinninmoth and other overseas commentators such as Bjorn Lomberg. Funny how they don't get reported all that often in the mainstream media particularly those of the left persuasion such as the ABC & Farifax media.

****

Campbell, David R. Qld / Brisbane

MBBS, FRANZCR - GP. Country medical superintendent, Consultant Radiologist

I am sceptical of the climate scare because consensus is not science, Much that has published by IPPC has been incorrect, and many predictions have not eventuated.

****

Campbell, Alex. Qld / Brisbane

BE (mining) - 30 Years mining coking coal in Central Queensland helping the world make steel.

The nonsense that if infecting society is an insult to someone who knows some geology, history, physics and chemistry and has learnt how to think.

****

Cargeeg, Len. WA / Bencubbin

Diploma of Building and Construction 2016. Soldier 10 years, Farming and Building 42 years.

My intuition told me 'climate change' was a hoax. I was fortunate to be able to follow various blogs such as Viv Forbes, Jo Nova, Andrew Bolt to gain further knowledge why it is a hoax.

****

Cahill, Rick. NSW / Alstonville

I have run my own businesses for thirty years including 20 years in financial planning where I was a specialist in superannuation so I have experience dealing with complex legislation.

I am sceptical of the climate scare because I have read through the Saltbush Club platform and I agree completely. Something must be done to reverse the policies which are destroying the Australian economy and our international competitiveness.

****

Carlson, Ross. Tas / Mountain River

Defence Force - RAAF

I am sceptical of the climate scare because the so called 'EXPERTS' refuse to enter into any debate, refuse to accept that there is a possibility that they may be wrong, refuse acknowledge the scientific facts put forward by other scientists clearly identifying climate change as a natural event and because the so called 'EXPERTS' are probably getting rich as a consequence of their scare campaign.

The Greens, the 'Lefties' and every other minority group have absolutely steam rolled what I believe would be a normal, enjoyable life. Our ability to have an opinion and to express it has been stolen from us. Being told that I must think the way some 'WACKO' thinks is far more than I care to take and way beyond reasonable. Over the years, our Defence Force members have fought numerous wars and many thousands have given their lives and many have forgone the opportunity to lead normal lives so the people of Australia could live free and speak freely. It seems that all of those sacrifices have been in vain.

Unfortunately, I don't see what we are enduring now improving any time soon. The 'Lefties', Greens and every other minority group that you can think of is just like a snow ball rolling down a steep mountain side. At the moment, those in Government that should be putting up some sort of a fight against all this Political Correctness are totally lacking in intestinal fortitude.

****

Carlson, Caroline. Tas / Mountain River

Bachelor of Science, major: Geography & Environmental Studies, minor: Mathematics, University of Tasmania

I believe the jury is still out with respect to humans having an adverse effect on the world's climate and much more open debate needs to occur. I am very concerned that Scientists who do not agree with the climate scare are being shut down or are in fear of telling the public the truth due the threat of job loss / career ruin. I am appalled how the public including children are being brainwashed about this and how every problem we have now is blamed on climate change which has no basis in scientific fact. I am also concerned the climate change industry is very large, greedy and corrupt who will use dishonest methods to continue to build their empire and gain even more money.

****

Carlton, Jim. Qld

Teacher

I like to listen to both sides of a debate and I am wary of simplicity. I believe that the recent bushfires and claims of 'natural fuel build-up' and 'climate

change' will become a strong election issue - what we have here is a potential "war" between the city folk that don't know and the and country folk that do.

****

Carr, Chris. Vic / Warrnambool

I'd love to join Saltbush. I'm a soon to retire as a public servant who, for many years has been subjected to top down political correctness and identity politics that must be suffered as an employee in a large govt organisation. I'm very tired of it.

I would describe myself as particularly un-woke, eg: no one has ever been able to explain to me how CO2, a planetary trace that is vital for life on earth has suddenly become a poison that is supposedly killing the planet.

****

Catoire, Andre. Qld / Redlands
Assoc dip Electronics/Communications. 28Yrs Airservices Australia, 8 Yrs Defence Contractor, 5yrs various employers.

I am sceptical of the climate scare for several reasons:
1/ Multiple Ice ages, it got hot, then cold, then hot, then cold. Multiple extinction events, we survived the last one, other species came, went, adapted.
2/ I recall the 80s scare of a global cooling due climate change, and the sky clouding over with smoke and pollution. Now it's apparently going to cook us all. Or drown us.
3/ I watch as massive infrastructure projects are being built on the coast, in the future flood areas. If we are meant to be worried, why?

****

Chambers, Mike.

Agriculturalist / Businessman managing sheep and cattle properties in NSW and western Queensland. Also engaged in merchandising, business management and marketing .

I am mid-way through writing a quite large historical novel about the bush and outback NSW. While doing that I thought I would do some research into the climate so I have read Ian Plimer's book (twice) and a lot of other material including Patrick Moore and others, and I am now an avowed sceptic and climate science enthusiast.

****

Chambers, John S. Vic / Canterbury

B Com [Melb], MBA [Melb. Business School] CA, F Fin, Faicd

Chartered Accountancy, Investment Banking/Member, Company Director

Beef Cattle Grazier for 35 + years, member of the former Fair Farming Group, now Climate Study Group

As a member of the Climate Study Group [for over12 yrs] we regularly publish our opinions in The Australian, Sun Herald on the subject and regularly attacking the falsehoods.

****

Champness, Dr. Peter.

MB,BS, B Med Science, M Med, FRANZCR. In summary I am a medical graduate (diagnostic radiologist), partially retired. I suppose that diagnostic radiology could be called applied science. I did an undergraduate year of medical research, so I have a degree in Medical Science. I have had a small introduction to the way that medical science is practiced in universities.

I have a long history of involvement in a number of forums discussing scientific issues surrounding the CO2 driven global warming scare and know the claimed "science" is incorrect and its effects have been grossly exaggerated. My activities include involvement with the Galileo Movement who have published the results of some of my experiments. I am also a supporter of JoNova.

****

Chapman, Russell. WA / Perth

Diploma of Business, Diploma of OHS - 21 years Army, worked in mining and construction held positions including Health, Safety, Training and Environment Superintendent / Manager.

Too many factors ignored, eg earth tilt, the wobble, magnetic north moving, solar activity including solar max / mins and flares. Science is based on clear replication so if you can do it then I should be able to do the same test with the same result throw it up it comes down its gravity. A true scientist provides their data and wants to be proven wrong, the knowledge is in the ability to replicate or identify why there are differences in results.

****

Check, Brian. WA / Nilgen

I have been sceptical about the demonization of CO2 and the ignoring of the complex drivers and history of climate change since the climate scare started gaining traction several years ago. I believe "climate change" is the great fraud of our era - an "Extraordinary Popular Delusion" from which the "mad crowds" may hopefully begin waking up to slowly.

****

Cheney, Eric. Qld / Clontarf

Mechanical engineer running my own repair business and 13 years with the New South Wales Fire Brigade.

I believe any thinking person would or should be made aware of the hoax called climate change. What the planet is going through is no different than what it`s been through before, a simple look at geology is all that is needed.

****

Chittenden, Judith. Qld / Tallebudgera

MB. Ch.B. FRANZCP. Work history: Psychiatry, interest in Group Psychology (eg "Lemmings over a Cliff phenomenon")

It's all happened before, climate is all cyclical basically. Still think we should keep our own backyard in order (get rid of plastic water bottles etc.)

****

Chris, HT. Qld / Gold Coast

Assoc Dip Business(Computing major)

Electrical Fitter Mechanic; Computer Tech; Transitioned to an Article Clerk in a Law office; various skills learned and self taught.

They keep us hypnotised on the narrative that you cannot break the 1st Law of Thermo dynamics. Doesn't mean you cannot trick it and still get something back.

****

Christie, Michael. Qld / Proston

Electrician - Spent the last seventeen years working as a maintenance manager in Australia Post.

I cannot find any creditable proof that the climate models that are used to drive this b/s are realising any truth at all. They appear to be very wrong!

****

Clark, Phillip. NSW / Orange

Solicitor / Lecturer in Law at TAFE and Sydney University

The universe and our solar system are constantly evolving and changing, species have become extinct and new species are created through the evolutionary process. Similarly, much has evolved in the climate debate since it first became a "trendy" topic to consider, eg: from carbon dioxide poisoning to global warming and ultimately to the equally fallacious "climate change"; which we must have to survive.

There has been "selective" use of science by the proponents to attempt to prove their case whilst conveniently ignoring (and aggressively "bullying") any person or body having the audacity to even question their research base or findings. This could indicate they know they are not being truth-full but, rather, ideological; as underlined by their refusal of the proponents to enter into any debate in a logical manner to attempt to determine the real truth.

The whole notion of climate change as alleged by the proponents is completely contrary to logic and common sense.

****

Clark, Bruce. Vic / Ocean Grove

Associate Diploma Electrical Engineering (Communications), Certificate of Management from Southern Cross University. Principal Telecommunications Technical Officer / Project Management

I only got interested very recently (12 months ago) when I heard on TV news that CO2 was supposedly driving this "global warming." I was dimly aware that CO2 was a minor constituent of the atmosphere but on the hearing the news article I looked it up and when I found it was roughly 400 parts per

million, I said to myself "No way can .04% of anything affect the rest" This lead me to youtube, Chris Monckton, Charlie Ball, Judith Curry, Will Happer, Richard Lindzen and all the rest. Without the benefit of a deep scientific background, I can't help to impressed by their calm reasoned arguments compared to the shrill screeching of the alarmists.

So here I am, a sceptic. I accept the climate might be changing a bit, it might be getting warmer. I accept CO2 is increasing and some of the increase may be due to burning of coal, gas and oil. I will even go so far as to accept the notion the some of the warming may be due to the increased CO2. I do NOT accept the notion that elevated CO2 levels are driving climate change. I do NOT believe that reducing human generated atmospheric CO2 will have any measurable effect on the temperature anywhere in the world. I do not accept that Australia or anywhere else for that matter should cease production of coal, oil or gas while other nations such as China India are exempt. I do not accept that known fuels should be abandoned with no workable alternative being available.

****

Cleine, Ken. Qld

Engaged in manufacturing engineering, business entrepreneur and inventor.

I listen to everyone - and then make up my own mind about things. I have read and read and read and I firmly believe that those who support the belief that man's existence on earth is ***'driving'*** climate change - are wrong. There is no doubt that climate is changing - It always has and it always will continue to do so - with or without man occupying the planet.

Global warming - yes it is evident at the moment but over the many millions of years prior there have been plenty of global warming and global cooling events. Such events are driven by natural phenomena and have been since the inception of earth. Whether such events are cyclical, randomly predictable or otherwise - I doubt that any branch of science can make a determination with any great accuracy. All of a sudden however, in a very short space of history and for a lot of reasons that have become part of political agenda, it's become man's fault!

I support state of the art coal fired power and I support nuclear energy and the concept of harnessing it as the Earth's primary or secondary, non-polluting energy source. Regrettably, poisonous chemical pollution seems like a difficult one to control if the earth has to continue supporting an ever-growing population with food. This is the dilemma that should be the attention of focus and **not** the burning of fossil fuels - particularly coal. It is about as clean as it gets !!!

Disbelievers should read the facts on modern coal fired power stations and for those who think of CO2 as a poison - waken up. It's the life gas that sustains the earth - without it , WE get no oxygen !!

Bill Shorten wants a country full of electric cars. Great - upon what resource do we rely to charge them? Please do not tell me "renewables" - it will not work ! The costs associated with building and maintaining the infrastructure to provide

renewable energies is unjustifiable, unaffordable and although "renewable", they are truly unsustainable.

The enormous cost and the damage done to our earth that is directly attributable to the total production of batteries, solar panels, wind generators, electric cars and so on probably cannot be quantified and it is never factored by advocates of renewable energies.

****

Clifford, Mat. NSW

E.N. Nurse, Social Science, plus others – engaged in Government roles.

I am sceptical of the climate scare because it is a blatant scam! CO at 300-400ppm is at historic lows now and the lowest for 600million years! What a bloody scam!

****

Cochrane, Peter. Qld Yeppoon

Dalby High school. Stock and station agent. Various towns in Qld. 20 years fuel distributor Mareeba NQ. 8 years Hotel owner in Yeppoon.
Very hard to believe about this warming (then climate change) when living in the country all my life.

Now all the predictions have failed miserably. Funny how all the so called scientists on climate change will not debate anybody.

****

Colebatch, John. NSW / Sydney

Lived and worked in SA (born in SA) , WA, NSW, Vic and Papua New Guinea. I have been self-employed for over half my working life. Industries include: paint, automotive component manufacturing and executive recruitment.

I am sceptical of the climate scare because of the name calling by those who claim climate change is all man-made. In his remarkable autobiography, Benjamin Franklin said words to this effect, “When people call you names, they either demonstrate the weakness in their argument or their lack of understanding of it.”

****

Colvin, Bob & Susan. NSW / Sydney

Bob - Small business educated at Sydney Grammar, marketing degree.

Susan - Educated at local public high school, advanced science, topped my class, Self employed businesswoman. I started my business at tender age of 21, Started with superb high-end curtains, working together, still going strong.

Parents business people and both private pilots, grandfather counter intelligence Airforce / Qantas double sunrise flights, longest commercial flights in history 30 hours in WW2, he flew Menzies secret correspondence from Perth to Colombo leg in Catalina flying boats disguised as mail planes.

****

Condon, Peter D. Qld / Southport

Retired Professional Aviation Pilot and RAAF squadron commander (Mirage fighter aircraft). RAAF Pilot for 23 years then 11 years training Learjet pilots.

The world was one degree warmer in Jesus Christ's time, and only 1,300 years earlier, it was almost two degrees warmer. We have been here before. Adapt.

****

Conley, Lorraine. QLD / Flagstone Creek

Ex-Army, Toowoomba Chronicle classifieds operator

***Apart from being a natural born cynic, I believe that this so-called 'climate change' is a naturally occurring cycle and has nothing to do with being man-made. We have climate change four times every year and have done for centuries. It's called Season*s.**

****

Conolly, Angus. Vic / Melbourne

Bachelor of Laws, Bachelor of Management. Engaged in a variety of roles including working for a geochemical surveying company, working for a logistics business, working in the legal industry.

"I am afraid of a scientific rhetoric driven by politics. I want to see educated debates with scientists putting forward arguments for and against positions, debates that educate the public and help us make informed decisions. Decisions that are important when we elect representatives who will implement change".

"Do we as humans impact the environment? No doubt we have some influence, but how much is contested. Should we do the right thing by our environment? Absolutely. But we need to do it with proper information at hand and we need to be measured in our approach".

****

Constantine, Geoff. Adelaide SA

Commercial Pilot 1963 – 2010. 42 years agricultural pilot (crop spraying & fire bombing)

I am sceptical of the climate scare because like you: I Question everything. (If I hadn't, I would have died many times as an ag. pilot!)

****

Cornell, Paul.

Name: Paul Cornell

Continuously studying whilst working in hospitality, property maintenance (gardens) and swimming pool industry.

There has always been and always will be climate change. To blame climate change on Carbon emissions is more than just a bit of a stretch. The Earth isn't on a railway track going around the sun; the moon has several cycles, some of which are mostly ignored, and, the sun can pull just about anything out of the hat without notice, like when a rather large emission wiped out the overland telegraph back in the early days, which if it happens again, will wipe out the massive transformers involved in the electricity grid.

Would the sandal wearers be jumping up and down if Oxygen generation increased. The scientific facts just do not add up to carbon being a problem. I mowed lawns for years and became very aware of how lawns grow after taking (soil) temperature and rainfall into account. I noticed about five or six years ago that growth rates had increased. I didn't look for it, it just hit me. I put it down to the increase in carbon dioxide available to the plants, but who knows. Apparently crop production is up.

I have written our web page to inform people about the truth as it relates to our industry, based on years of observation, experience and talking to working, as against academic, scientists. That's what we need to do with Climate Change. The brains are there, but we have to get them in front of the drongos.

****

Craigie, Steve. WA / Laverton

Worked on Remote Stations, Station Manager for Twynam Pastoral Co and British Tobacco, Owned a leather manufacturing business which I started in 1988, it is now owned and run by my son.

It's difficult to understand those with the view that CO2 is a problem, I think it's wonderful and see the results in the desert country I live in each day. I'm very concerned for what the future holds for my seven grandchildren in this wonderful brown land we call Australia.

****

Crain, Dominic. Vic / Melbourne

Retired Airline Pilot. Airline Transport Pilot Licences issued by: Australia; USA; JAR (EU); Vietnam; Seychelles. RAAF aircrew Signaller (1963 - 1968); Flying Instructor(1968 - 1969); Airline pilot in domestic (Australia) and international operations (Europe, Asia, the Americas) (1970 - 2003).

Climate has constantly changed since the earth first emerged from the mass of the solar system evolution. All life from its emergence on the planet has affected the climate to greater of lesser degree. However, the outrageous alarmist assertions by so-called "scientists" represented in particular by the IPCC, and affiliated and/or like bodies such as those under the control of people like Professor Tim Flannery have put fear into the grandchildren of people of my vintage, and unless restrained, into generations to come.

Never do we hear of outside forces affecting the climate, such as the sun cycles, the planetary orbit of the earth and the perigee/apogee which in turn can be affected by other forces such as the proximate and either random or orbital passage of minor spatial matter.

Production of energy in developed countries such as Australia cannot be allowed to be subservient to the enormous development of China and India, and in the process have our way of life and economy destroyed.

****

Crain, Janice. Vic / Melbourne

Registered Nurse and Horticulturalist – have been nursing in vast range of medical areas.

I am sceptical of the climate scare because there is no scientific proof of "man made" effects on climate to the degree of fear mongering perpetrated by the IPCC and similar bodies.

****

Crandon, Richard.

****

Crawford, Graeme. NSW

BE Hons, MBA, Dip Eng. Apprentice Electrician/Tradesman/Supervisor, Research Reserve Bank/ABS, Research/Analyst Stock broking Canada, Corporate Planning Mining Ind Canada/UK/Australia, General Manager Consumer Products and Pulp and Paper Ind, MD Foundry Ind, Consulting

Having grown up in western NSW have experienced hot and dry periods lasting a year and more. It is not possible to model climate change as we do not have the exact data covering 1000's of years. The proponents of climate change are mainly socialist academic intellectuals masquerading as scientists most without any direct training. The planet earth has experienced massive change and is continuing with change since it was ever formed.

****

Croker, Brian. NSW / Glenorie

Carpenter by trade, builder by profession.

Born in Sydney lived all my life in Australia. The general consensus throughout my life was to avoid discussing religion & politics. But both of these disciplines have in the last thirty years risen up to confront us.

In these last days the evil has overtaken the good. This is very apparent on social media, heavily afflicting our political leaders; they suffer an inability to discern right from wrong, lack responsibility, common sense & accountability, over burdened by hidden agendas & manipulative processes, to the detriment of those whom they are elected to serve.

****

Croker, Maxwell.

****

Crook, Roger. WA

Dip Ag. NCA. Farm manager. Station manager. Marketing/sales manager for largest chemical company in Australia and the world.

I am sceptical of the climate scare because the forecasts have not happened and the models are hopeless.

****

Cross Yuille, Ky William. Vic

Engaged in the tourism industry.

I'm convinced climate change hysteria has got to stop. Most people who advocate 100 % renewable energy are young and inexperienced in life.

Russia, USA, China & India produce most of the world emissions, yet they are not in the Paris agreement. (Russia will pull out of it soon) so why is Australia willing to be in it?

****

Cross, Jim.

****

COWARD, Robert. NSW / GOLD COAST

University of Life.

I am sceptical of the global warming scares because of the gross exaggerations of disaster, their failed predictions and the fact that they manipulate the data and the interpretation of the climate model outcomes to suit their political campaign objectives.

****

Curby, Harry. NSW
Arts Music Performer teacher

Neither scientist nor academic, no degree do have I,
But read much and listen, then shrug shoulders on high,
A sceptic and doubter when foreign powers want my money,
Such trades warn me off, I will be no fun bunny.

****

Dagg, Chris. WA / Bridgetown

Tradesman, Former bank officer in the Rural Bank of NSW; Self employed sign-writer.

I have studied all sides to this debate and am sceptical of the information/opinions of those who are convinced of man's influence on the world's climate.

I have a great belief that this is a money-making scam for people, primarily scientists and universities to keep themselves employed at taxpayers (Government) expense.

My political allegiance for the past 40 years has been to the Liberal Party and I am a current Branch President.

****

Dark, Ken. / Berry Park

Electronics Engineering Advanced Diploma. Electrician, Executive Alcan Australia, Director and ex Chairman of Publicly Listed entity.

Go to South West Rocks (NSW) sometime, wander down to the point below the Goal and read the sign posted there - it states something like "this point has been both x? metres below water and above water level during the past x? million years" - now that doesn't sound like man-made catastrophe to me! - Just one little example.

****

Davidson, Joan (JP). SA / “The Blackout State”

Thank you and congratulations on the wonderful work which you have done, and are still doing in making many Australians aware of the 'Global Warming' scam.

I am a 76 year old Great - Grandmother and I am really frightened by this push for total and absolute control of every aspect of our lives by these morally bankrupt people who would totally and utterly destroy our democratic way of life for their own gains.

I am worried about the life my great grandchild will be facing if these "Green" religion fanatics win the game.

There is little I am now able to do, but alert people that this so called global warming is a scam put about by a group of fanatics looking for disciples to convert 'deniers' to their way of thinking. Often, this is obtained by way of intimidation, as, of course, you would be only too well aware. Needless to say, the aim is to find their way to total world domination, and of course, we are seeing the way this is already beginning to occur via the United Nations.

I would like to be a part of the Saltbush Club - even if only in a very small way. I encourage all of you in the wonderful work you do.

****

Davies, Ben. Vic / Ballarat

Masters IT - General Manager

I believe climate change has been created as a scare tactic by the media and politicians, to create a new cash flow and means of controlling the people.

****

Davis, Peter. NSW / Shoal Bay

Transport Operator and Independent Candidate for upcoming Federal Election
Work history: Transport and Construction

I am sceptical of the climate scare because I prefer to put my faith in Scientists specialising in Climatology and Meteorology than Doctors of University Donations. I guess it comes down to a case of Sense and Nonsense.

****

Davies, Garry. SA / Millicent

Common sense and history - self employed

As a founding member of the Climate Sceptics Party, [born in Mt. Gambier] along with Leon Ashby and others , it was, and still is, very apparent that the biggest hoax ever is gaining momentum. We were laughed at, but hopefully we may have the last laugh on the poor misguided fools who have not the intelligence to think for themselves.

A big job ahead.

****

Deadman, Rosemary. NSW / Batemans Bay

I live in Surfside, Batemans Bay and we are fighting the Coastal Management Plan. I am Vice President of the Eurobodalla Coast Alliance which is part of the NSW Coastal Alliance.

I do not have any qualifications to bring to the table but I have lived on the same beach for nearly 40 years and apart from losing our sand due to scouring by the Clyde River, and therefore losing our main defence against storm surge, ***I have not seen any evidence of sea level rise in this area at all.***

We need to get our old Australia back.

****

Deck, Patric, NSW / Glenhaven

The climate scare is a lie which big media business bureaucracies government unions green movements believe and pushing for their own agenda subconsciously wrecking western democracies. Climate change has been a continuous evolving phenomenon since the world's creation.

****

Deer, Terry & Meryl. SA / Murray Bridge

Farming, Photography and Machine Operations

We've been following Jo Nova for a long time, she is able to give us explanations and the know how to talk to people.

We can't understand how money and mortals can change weather and don't understand how we can get electricity free and green from sun or wind when the machinery used is not green but is polluting in it's creation.

When we read through the list of amazing people in the salt bush club we were, at first intimidated, but very quickly intimidation changed to excitement at what we will achieve.

****

de Lepervanche, Peter. NSW

NSW Leaving Certificate. I have learned to be a reliable analyst and get letters published in The Australian on an occasional basis.

CO2 concentrations in the atmosphere have been much higher in the past when it was much cooler. The Left is trying to destroy Free Enterprise Capitalism probably with covert help from China.

****

Dennis, Terry (Ted). Qld / Mackay

Tradesman Diesel and Heavy Earthmoving Equipment Fitter. Sole owner and MD of D&T Hydraulics and Engineering Pty Ltd, currently employing 67 staff with planned growth 75 within a few months.

As a school student we were all taught that solar flares (storms) on the sun cause changes in the climate and weather conditions of our entire solar system. Solar flares/storms can last for years and decades and changes caused by solar flares can take many years, after commencement, to effect Earth's weather.

CO2 has for ever been emitting from the earth's mantle, into the atmosphere and currently constitutes 0.4% of the planet's atmosphere.

I cannot understand how hundreds of years of scientific study can simply be dismissed by stupidly, fear, and the desire of people for applause and attention. I am not afraid for my views to be known.

****

Derrick, Christopher. Qld / Brisbane
Bach. App. Science - Construction Management - Owned and operated Lawder Interiors P/L, providing Construction activities across Australia and New Zealand for over 20 years.

I am sceptical of the climate scare because I'm inclined to trust the 'real' Science.

****

Di Cesare, Adam. NSW

JP – Engaged in Sales & Project Management for the Signage Industry serving corporate & multinational clients.

I cringe every time I hear the words "Climate Change" and "Global Warming" from activists, Greens and current Labour leaders blaming it for anything and everything that occurs to this planet today without any real common sense and convincing explanation and with total disregard for the millions of years of evolution before the $$$ even existed. The point is that it doesn't matter how many Billions of Aussie dollars you throw at this nonsense it will not make any difference to global temperatures.

Of even more concern is how they are succeeding in pushing these issues to brainwash school children without any control from education authorities and how it's renewable policies are taking this country to de-industrialisation.

****

Doak, Brian. NSW / Sydney

BE. Air conditioning engineer

As a farmer's son I have long witnessed the variability of Australian weather, and this is a dry continent 'of droughts and flooding rains'.

Also, a knowledge of religious history reveals that any end-of-the-world consternation can become a false motivator. In the unsettled society of mid 1800's confronted by Karl Marx and Charles Darwin, new Christian sects arose, particularly in the US but also in Europe, when agitated individuals with prophetic conviction spoke out in their belief of warning the world of its imminent destruction [refer SDA, JW, ---].

Child preachers appeared in the US and Europe warning of the imminent 'end', and 170 years on a Swedish child with a similar false narrative has been pushed into prominence again.

Fear is perhaps the most powerful motivator and once a climate of fear is established, this time about a 'climate to be feared', it takes concerted effort to dispel the fear. Thankfully the Saltbush Club is making that effort.

****

Dorahy, Vanessa. NSW / Sydney

Last completed study was Graduate Diploma Tourism & Sports Management/Marketing at UTS, Sydney.

I am currently a full-time stay-at-home mother. Most recent work was Operations Manager of a Marketing Company.

"I'm sick of the absolute one-sided reporting on this issue in all media."

****

Dorman, John Qld / Toowoomba

B.Sc. (University of Canterbury NZ), Geologist

I am sceptical of the climate scare because, like Ian Plimer, and most geologists I suspect, I remain unconvinced that human activity is driving global warming - to the extent that may or may not exist. There is a pressing need to fight back against media suppression of contra-opinions so good on you Saltbush Club for taking up the cudgels.

****

Douglas, Craig

Owner/managing Director of Craig's Engineering.

I do not believe in the Paris accord. You cannot sensibly agree to foreign run polices orchestrated by the countries wanting the most in foreign aid. How China and other developing country's not be in accordance when we apparently 'have to be'?

Climate change is good for Al Gore, who has made 400 million out of the deal, burns more electricity than 34 households and is a board member of Apple manufacturing products in Third World County's with cheap and reliable power.

We cannot replace our current power generation with 'renewables' unless we can sustain low costs and grid reliability in the meantime. Everything is blamed on coal fired power stations rather than all the recent additions of heavily subsidised and inefficient, weather dependent power sources.

****

Drougas, Peter. NSW / Sydney

BE (Hons) (Syd. Uni 1971), M Eng Sc (NSW Uni 1983), CP Eng. Principal Structural Engineer and have worked on many large project in Australia, Singapore, Hong Kong and Dubai. Working part-time for the Singapore Office at present.

I am sceptical of the climate scare because:

1. ***I have yet to see verifiable evidence that man-made climate change has occurred.***
2. ***It is well known that the Bureau of Meteorology has been doctoring temperature records in order to suit their narrative.***
3. ***It is also well known that the IPCC reports have also been doctored.***
4. ***I have carried out some very basic calculations which demonstrate the fraud of man-made climate change.***

5. ***The bank accounts of the proponents of this new "religion" have been growing very nicely in recent times.***
6. ***A lot of money has been sent to the crooked EU for no benefit to Australia, except to some bank accounts.***

I could go on, but that would take too much space.

****

Dudman, Bruce. Tas / Hobart

Associate Diploma in Communications Engineering - (RMIT), MBA (Technology Management) – (Deakin University/Association of Professional Engineers Australia), Qualified by exam as a Company Secretary (The Institute of Chartered Secretaries and Administrators).

10 years with RAAF, 6 as a Radio Officer, 25 years with Hydro Electric Commission Tasmania as a Communications Engineer, 1 year with Sea Wing International as company secretary.

Am not convinced that the current 'climate change' is anything other than part of the continuous hot/cold cycling that has been happening on Earth for millions of years.

****

Duggan, John. Qld / Maryborough

Self employed, farming, trucks, earthmoving, motels….jack of all trades.

I am skeptical through experience . Have done much reading on global warming, now global climate change as the EXPERTS want a two way bet! Conflicts with knowledge of the earth's climate history.

****

Durden, Charlotte. SA

I am Administrator for a Facebook Group "Against Political Correctness". We've seen Viv's article posted on climate change and have re-posted it on UN Global Pacts, Jan 2019. ***So important to understand as election looms***.

Our Group of 2.7k members are in line with your views. You are going to be swamped with interest I think. Suggest you get own Facebook Group to cope with online interest as it sounds like you will struggle with your website admin. My group of nearly 3,000 members (it doubled itself in a year) needs 3 administrators people to cope with posts and interest.

You are meeting a very current explosion of interest in those issues I see on your site. We, as conservatives, seek factual explanations for what is occurring worldwide. Please be ready for a mass interest!

Global warming is a hoax that costs a nation dearly.

****

Dwyer, Sharon. Qld / Septimus

Farmer, member of Central Queensland Soil Health Systems

The earth is evolving and growing. Changes in climate and weather have been occurring since the earth was formed and can be seen in ice cores, rock formations and even our own art and history. We need to think more like King Canute. We need to work with nature rather than trying to control it especially when that control is designed to make a few chosen individuals rich at the expense of everyone else.

****

Eade, Paul. Vic / Mildura

MBBS FRACGP - General Practitioner

If I believed a model I would shop at Meyer ..I don't

****

Earthrowl, John Anthony. Qld / Victoria Point

B.Sc.(Hon Geology), M.Sc. (Applied Geology)

Quebec Geological survey mapping in the Grenville Province followed by base metal exploration in northern Quebec, Ontario and Labrador. Worked in British Solomon Islands, New Caledonia and then Western Australia during the nickel boom. Supervised field programmes for uranium exploration in the Northern Territory. Also involved in the NT Chamber of Mines.

I am sceptical of the climate scare because all the real science points to anthropogenic climate change being the biggest scam ever invented by humans. My biggest worries are that certain large Australian mining companies are falling for the scam and divesting from their core interests of coal mining. And in addition the insurance world and super funds are also falling for the scam.

****

Easby, Anne. NSW

Marketing Diploma, Real Estate Property Manager, Member of the Climate Realists of Five Dock, No Carbon Tax Sydney Rally organiser and speaker, political blogger with a **c**areer in administration and marketing covering various fields such as printing, commercial and residential property management and shopping centre management.

I searched Google for a list of pollutants and carbon dioxide wasn't listed. The IPCC and the UN are using the climate as a very effective method to redistribute the wealth of developed nations to undeveloped nations. Climate change/global warming has reached religious proportions: the biggest scam since Y2K.

****

Edwards, David. Bordertown / SA

Farming and Viticulture

I have just listened to a presentation from Ian Plimer!

****

Edgar, Clare. Qld / Toowoomba

Having been engaged in farming all my life I am skeptical of the climate change scare becausel believe in Mother Nature and natural environmental and climate change

****

Eggins, Narelle. – awaiting details.

****

Eisenbarth, Allan. WA / Perth

Bachelor of Science in Mechanical Engineering, Master of Business Administration
Worked for more than 45 years in the oil and gas industry internationally, including approximately 10 years in consultancy.

I have studied climate science for the past 3 + years, which led me to believe the hypotheses that CO2 controls climate is totally false. I am appalled at the huge waste of financial resources on wind and solar energy, which is intermittent and unreliable - this waste has to stop.

The global warming propaganda spread by the ABC and SBS is disgraceful and is polluting the minds of the public - it should be stopped.

The anti-science curriculum fed to our school children will damage their understanding of science - it should be stopped.

The many climate scare stories which reverberate in the media are substantially false - the media must be encouraged to check their facts before publishing these scare stories.

****

Elgar, Ronald. Geologist? – awaiting details

****

Ellis, Geoff. Qld / Cairns

Masters in Business Administration (MBA) - Predominantly established my own business enterprises and more latterly self-employed in my senior years. No appetite for 'retirement'.

I will never pretend to be a scientist. Science was my weak subject at school. However history was my strength. Consequently I am more inclined to be persuaded by historical facts than forward projections.

It could be said I became sceptical the more I read and the more I heard. You know something is wrong when the 'Science Show' on ABC Radio National point blank refuses any items that question the Al Gore / IPCC narrative. You know something is wrong when the ABC current affairs people point blank refuse to present balanced opinion and comment on the climate change issues. You know something is wrong when those who raise questions are branded 'deniers'. You know something is wrong when people ask 'So you don't believe in climate change?" For people who ask that dumb question clearly do not understand the issues.

So after several years, it is now evident to me that we are not dealing with science. We are dealing with cults. This is not about global warming. This is about power, control wealth distribution, socialism and corruption.

****

England, Garth

Graduated HDA from Hawkesbury Agricultural College and still working on a doctorate in farming. Experienced in aerial agriculture (pilot), grazing and metrology.

I take a lot of interest in the BOM site and their extensive records, unbiased I assume. You can play with the data on a regional and time basis using the choices and the slider, "T" is for trend line. It is generally getting wetter everywhere except far south west WA & TAS which are going backwards but overall the continent is wetter by an extra 7.79 mm per decade (lower left of graph) or an extra 91.1 mm per year over the whole continent since 1900.

I love using this data on the tree huggers since most of the wide scale land clearing has happened since 1900. Maybe we should clear the rest and make it wetter still. Droughts are not new and are just a glitch in the scheme of things, I've learned to live with them.

****

English, Peter & Veronica Qld / Malanda

Long term dairy farmers.

We have worked in the environment for sixty years, and in this capacity we have observed closely, and don't see any change in the world climate. Believe greater costs are being thrust on us for no reason and are coming with a greater burden. Find it all frightening.

****

Erskine, Ian. NSW / Ashtonfield

Auditor, Company Director.

CO2 of which Plants ingeniously convert via Photosynthesis, which is the process by which plants use sunlight, water, and carbon dioxide to create oxygen and energy in the form of sugar so as we Humans can feed ourselves. The reality is we actually need more CO2 not less.

****

Erskine-Smith, Robin B. Qld / Brisbane

PhD, MBA, BEcon, Grad Dip Ext, HDA, JP.

Lecturer Griffith Uni (Qld - in International Management 4 years), Adjunct Prof, Uni of Sunshine Coast (Qld); Team Leader of many International Aid Projects in Developing Countries eg Indonesia (one was $800m budget staff 3,000), PNG, Solomon Is, Vanuatu, Kenya, Tanzania, etc (total 22 countries over 40 years); also owned and ran a 1200 Ha cropping and livestock farm at Dalby, Darling Downs for 12 years part time; Senior Project Manager, Qld Dept Primary Industries 8 years, Management Consultant, Australian Institute of Management 4 years.

I am sceptical of the climate scare because Climate Change has occurred over all of history on earth. Mainly caused by the cycles of the Milankovich planetary effect, and there have been seven ice ages over the last 650,000 years, and there have been 8 cycles of alternate cool and hot weather lasting

270 years over the past 11,700 years. The timing of the cycles indicates a low temperature period is due to commence soon.

The current "Climate Mania" is an extraordinary emotional reaction to cyclical climate variation, which is not directly linked to weather or events like droughts and bushfires.

****

Eyles, Garry. NSW / Bungendore

Electrical Engineer in the HV electrical industry

The climate scare is inflicting lots of pain for zero gain while a lot of people make big money from the scam. Also don't believe that our political leaders are so stupid that they cannot see this scam for what it is.

****

Evans, Roger. NSW / Wollongong

BSc (Eng) in Electrical Engineering, UNSW FIEAust

I spent my career in the steel industry commencing with John Lysaght and then moving to Australian Iron and Steel (later Bluescope steel) as Chief Electrical Engineer.

I read Time Flannery's book 'The Weather Makers' which I found plausible and decided to research the problem more thoroughly. I soon found that there was no evidence that carbon dioxide was causing the mild warming then being experienced towards the end of the 20th century. As more of the earth's parameters became measured and made public (polar ice area, sea level, satellite based temperature measurement etc) it became apparent that all the earth's parameters are within a normal range. The earth has an inbuilt thermometer in the form of sea level which is not indicating any increase in the temperature of the oceans beyond the gradual increase resulting from the end of the last ice age.

I have followed some of the modelling work used by the IPCC and the claim that water vapour and clouds could provide a positive feedback to warming is totally ridiculous. As someone who worked with control systems all my working life I find zero indication of a positive feedback factor in observing the earth's temperature.

****

Fatchen, Tim (Dr). SA / Mount Barker

BSc (Hons) PhD (Ecology, Adelaide) AmusA. Engaged in Arid grazing systems research, Biologist-Planner NPWS, Foundation Lecturer in Ecology 1978-1980 & Acting Head, Department of Natural Resources. Environmental Studies and Urban & Regional Planning, Adelaide Univ. Active firefighting SA, Senior biologist, Dames & Moore Sydney. Principal, TJ Fatchen & Associates and subsequently Fatchen Environmental. Park management plans and environmental project management of in-situ leach uranium mining. Forest management and mining rehabilitation. Trains, broad-acre farming, ports, airports, defence lands, petroleum & gas, air pollution (SO2), hot rock drilling and cleanup, powerlines, pipelines, open cut mining, underground mining, meteorological dispersion modelling, international mine rehabilitation and steel work environmental issues, and copper smelting in India.

Anything strongly argued by the green-left I mistrust, from a lifetime's experience of combating lies in environmental assessment. So I actually read the Climate-gate emails and looked at the statistics in use, which I had used way back in the 1970s. Saw the outright intention to lie stated in the emails, and that the stats knowingly broke a cardinal rule - do not use the technique used to generate data to also test that data; it always agrees with itself (autocorrelation). I realised then that scientific ethics had been thrown out the window. I will not accept supposed scientific truth from liars.

****

Fenny, Rick. WA

Veterinary surgeon of 50 years, pastoralist (Carbla/Woodleigh/Yalardy in southern Gascoyne), businessman, film maker “Desert Vet”, Ocean Park Aquarium Shark Bay, Maitraya retreat in Albany and farms in Dandaragan and Albany.

Concerned about the stupid policies of locking up land, clearing bans, and the power of activist groups and the uneducated masses that support them and vote.

****

Feez, David. Qld / Buderim

I have received information re the Saltbush Club and wish to congratulate you all in establishing such an organization, sadly the Gov. to my mind is not endeavouring to distance itself from the Labour Party on this important issue of so called man made climate change.

There are many of us who have continued with our efforts to advance good Government for our nation, so I wish to add my name to your Saltbush Group membership.

As a matter of interest there are many retired people on the Sunshine Coast with similar concerns who I am sure would wish to add their names. Most would be either retired business men or Primary Producers and am happy to canvass them if you so wish.

****

Firman, Gary. NSW / Gundaroo

Electronics and Communications Engineer. Electrical/Communications/IT sector mostly in Canberra.

The Climate Scare is a socialist, UN scam to de-industrialise developed countries and to make Australians subservient and dependant on a Marxist state.

There is nothing that Australia can do to significantly reduce carbon emissions whist other countries are building 200+ HELE power stations that will use our coal (Do these idiots think the carbon emissions travel vertically out of our atmosphere?)

There is no science that supports the climate scare argument that is supported by the recent climate history,

As an electronics engineer that started my career in telephone exchanges I know how big the battery needs to be in an exchange to keep the exchange running for 5 minutes whilst the "Normally Stationary Diesel Generator" gets up to speed. Australia doesn't have enough land mass to house a battery system big enough to keep the country running for more than about 2 hours once the wind stops after dark!!

I could go on!!

****

Fisher, Graham
Tradesman / Businessman: Spray Painter, CSR Employee (concrete), Retail store owner.

I have been a Labour voter all my life. Over the past ten or so years the party has lost it way buy leaning further to left looking more like a greens party rather that the Labour party I once supported , I now find myself agreeing with the ideas of the conservative side of the Liberal party.

As far as the great Climate change Hoax goes, I have been watching the Outsiders program on Sky and Ian Plimer and they tend to make a lot more sense than the IPCC. The climate has been changing since it was created why after 200 years of the industrial revolution, all of a sudden it's claimed that we are the problem. I call nonsense.

It's time we fought back against this madness.

****

Fitz-Simon, Thomas Killen. Vic / Gisborne

B Eng. Electrical Engineering (Monash), MEng Systems Engineering (ANU). Worked as a control systems engineer, mostly in the mining industry and has a particular interest in nuclear power.

This year won the second place for the Spectator's Thawley prize for which I wrote a satire about global warming. A one-time believer, I lost his faith and became a climate change apostate in 2014.

****

Flood, Gerard Joseph. Vic / Melbourne

Activist or official of three NGOs, including one national political party.

Defender of : Australian hard industry, security, Defence, imperative for Public Policy to rigorously consider empirical evidence and fundamental national interests.

****

Forbes, Bill. Qld / Noosaville

Retired Chemical Trader (Self employed)

I *unambiguously reject* the climate scare because as I see it, the lunatic Left demonises CO2 - if they dislike it so much they should just hold their breath.

If CO2 is a mere 0.038% of our atmosphere, and mankind contributes 3% of that and Australia contributes 1% of that, then what lunacy are we dealing with thinking we can do anything whatsoever to "save the planet"? It's certainly not a science based rationale - it's clearly politically driven and one doesn't need to be too bright to recognise who's behind that, think for a moment, who is poised to substantially gain in around 30 years time .. follow the money would be my suggestion. How on Earth did we ever arrive here? We have 40% of the worlds Uranium and centuries of the best quality coal we fail to utilize, but willingly export to abusive sovereign nations with highly questionable ethics and inferior industrial practices - they must laughing their socks off.

It's an unbridled tragedy what happened too to Carbon Energy's UCG in Queensland (not to mention the shareholders). We were one of the 20 largest (shareholders) at one time before the technology (developed in concert with the CSIRO with millions written off) was egregiously surrendered to the PRC courtesy of a certain QLD politician who ought not to have left his surgery. A frontal lobotomy is overdue for the fool.

We need to wake up.

****

Foster, Campbell

I'd love to become a visible member and be of any help I possibly can, time for sitting on the fence is over, Australia is facing a wholesale attack on conservative values and basic logic coming from the Government etc.

I am a BSc Civil Engineer, civil/structural + geotechnical engineering consultant. Worked with most of the large mining firms, BHBP, Rio, QGC, Arrow and so on and no longer interested in working for these dinosaurs as they are part of the our problem.

I am a climate change sceptic (man-made) and am well aware that our planet and sun are undergoing change which is effecting our climate dramatically. Our Government and the World Governments / UN are lying through their teeth, nothing more than a power grab.

There is no logic in the decisions being made that effect us all on a daily basis, we are facing a climate catastrophe and our Government is doing all it can to blame us and doing nothing positive to prepare for what is coming.

****

Fowler, Peter. QLD

I am sceptical of the climate scare because as a non believer in man-made climate change, I am concerned about where this is heading and for my grand-childrens' futures.

****

Fox, Jeff. Qld / Brisbane
Cartographer - Consultant - Infrastructure Construction and Project / Operations Management.

I am sceptical of the climate scare because I find the articles and discussions debunking the climate scare far more logical and plausible than the claims supporting the scare.

I continually share some of the facts about the climate scam with colleagues and contractors and find it amazing how few people who are well educated have the capacity to think for themselves or how many are too scared to speak out.

To the members of Saltbush - Keep up the good work.

****

Franey, Nick. WA / Perth

BSc Mining Geology (Leicester Univ, UK), MSc Mineral Exploration (Rhodes Univ, South Africa)

Geologist (earth scientist) with a broad range of mineral exploration management experience, at grassroots and advanced project level; I have searched for most types of gold and base metal deposit in a variety of geological terranes. I began my career as a field geologist and rose through the ranks, in twenty years, to become VP Exploration (Africa) and then VP Exploration (Asia-Pacific) for Anglo American. I was a member of Anglo's Management Committee, which was responsible for global exploration. More recent executive appointments, with Anvil Mining, Oceanagold, Discovery Metals, Azumah Resources, Renaissance Minerals and Auris Minerals, have provided me with a taste of the junior- to mid-tier sector of the mining industry. I have actively worked in more than 15 countries, on three continents, and have visited as many again on various geological missions.

I am sceptical of the climate scare quite simply because there is no empirical evidence of a link between CO2 and global warming. The climate has always changed (and always will) - that is not the issue. Science is being used and abused to promote propaganda in support of a political agenda. And sadly, the general public are being taken in...

****

Frew, Dennis. – awaiting details

****

Ferguson. Colin. NSW / Gunnedah

Bachelor of Financial Administration, UNE

Industrial Automation Western Australia Iron Ore Mining and various applications around the world including Power Generation, Mining, Manufacturing, Oil and Gas, Pipelines and Pumping Stations, Steel Mills, Aluminium Mills, Paper Mills, Building Environmental and Monitoring systems, Rail Control systems, Sugar Mills and associated power co-gen and many others.

I am sceptical of the climate scare because dire warnings of the "End of The World" predictions since the late 80's have not happened. Not one Climate Prediction has happened. CO2 is an absolutely necessary element for life on this planet. All the scientific data that is available proves the opposite of what the UN / IPCC preaches but the media love a Doomsday Headline.

Children are believing this rubbish and becoming suicidally depressed.

Science is NOT a religion. It is Fact based, with Theories that are tested and proved or disproved. Factual Data cannot be ignored if it doesn't fit with a Theory. Real Science would admit that the Theory is incorrect.

****

Friar, Narelle. NSW / Macksville

Retired teacher

I have lived through floods on the Clarence River (birth town and grew up on a fairy farm 1947-1964) and the 'crown of thorns' scare to the Barrier Reef in 1969. We rushed up from Emmaville to see the reef as they said 20 years and it would be gone. No I do not believe in any 'climate scare'.

****

Daniela, Furitane. Qld / Maryborough

The climate change all the times. It's not man made, actually the CO2 is greening the earth. Why I am sceptical? I don't believe the greens and Labour party pushing the climate change It's really a hoax. I am saying the truth of the matter , since the bible the great flood, American Indians speak of the great flood, in 1525? La Nina was recognised and many thousand years ago, it's a periodic cycle of the earth and the moon and solar flares(which the solar flares are quiet).

****

Gamble, Simon. Qld / Noosa

I left Melbourne Grammar in 1960 and spent the next 7 years travelling and working around Australia in the mineral exploration industry amongst other things.

I commenced my career in stockbroking in 1968 in Melbourne and continued in that industry in Brisbane and then in Noosa.

I have followed the Climate Change debate since attending a lecture by Ian Plimer in about 2013. I was a key figure in organising the lecture by Lord Monckton in Noosa and through the Noosa Long weekend Festival arranged a debate on the topic in which the panel included the late Bob Carter and Des Moore.

In this year's Noosa Long weekend festival we organised a debate on Energy and the panel included Judith Sloan and Simon Breheny from IPA.

My major concern with this debate is that if we pursue the current policy being implemented major industries will withdraw from Australia creating unemployment and energy prices will continue to soar making it difficult for a significant number to maintain their current living standard..

I look forward to supporting the organisation in any way possible and working with those involved to changing the current views and policies being implemented by government.

****

Garling, Ross. Qld / Townsville

B.E. (mining) (UNSW), MBA (Macquarie), 1st class cert of colliery management (Qld & NSW)

50 yrs experience in the coal & minerals industry as an engineer and manager. Last 28 years specialising in the evaluation, re-mining, re-processing, and rehabilitation of tailings. Am still working as a consultant and contractor, and have developed new processes to make high inherent ash coals financially viable, and to convert coal to bunker fuel thereby increasing its value.

I totally reject scares that are not based on fact, but merely the ideological opinions of ignorant people, or those who are determined to destroy our society and economy for political gain.

****

Gibbons, Roger. Vic / Melbourne

First class degree in Economics from Monash. Marketing and General Management in Fast Moving Consumer Goods in Australia and the UK.

While global temperatures have increased by around 1 degree since the end of The Little Ice Age, there are many recent studies showing this would have occurred irrespective of CO2 increases. As a result actions taken to reduce emissions have no benefit in an absolute sense, nor can be justified on any rational cost benefit analysis even if some "benefit" was imputed or assumed. The world is therefore economically poorer. Australia through its' disproportionate commitments is disadvantaged economically. Our children and grandchildren will bear the cost.

****

Gilchrist, Anne. Qld / Herberton
Science degree with a major in chemistry. Worked as a Maths / Science teacher and in senior school taught Earth Science, Chemistry and Maths B (the calculus strand in Qld) plus the usual run of Junior maths and Science

I don't dispute that climate changes but I think it is caused by solar activity and changes in the Earth's orbit and orientation, not by Human activity. I find the IPCC climate models too simplistic to predict any major changes in climate especially when they ignore the most important greenhouse gas, water vapour. The major warmings of historical time, The Bronze Age, The Roman and The Mediaeval were not associated with high CO2 in correlated ice cores from Dome in Antarctica and Greenland. So why would the Modern Warming?

****

Gillis, Jeffrey. Vic / Macedon Ranges

Jeff is an accomplished IT professional and systems thought leader with more than 45 years' experience in the IT industry as a practicing ICT functional manager and strategic consultant, IT services business general manager and company executive with 360° business experience and proven IT service company building track record. He can draw upon the unique insights gained from working on systems across a range of industry sectors and as such is an active promoter of technological progress. He has advised boards and been an active member of a number of government advisory committees, professional bodies and industry associations.

He lives by the idea, that having trust in people's ability to question the status quo, to pragmatically solve problems and to technologically progress as a result, is far healthier for us all, than living with the regret that we could, but didn't.

"I have held serious doubts for some time about the wisdom of justifying government policy based on the interpreted predictions of computer models that attempt to predict the future of a non-linear, chaotic and highly complex natural system such as the global climate. Research and improve the models and capture more relevant accurate data by all means, but we should not condone the use of these predictions as an ideological prop to politically stop technological progress and economic advancement that lifts more people out of poverty. Especially when those predictions have been shown to be consistently wrong."

****

Gitsham, Andrew George.

Diploma Marketing. Export marketing manager for Canadian multinational, Founder and Managing Director Vision Systems Ltd (subsequently sold to USA investors).

The science is far from settled and IPCC models have failed miserably to match reality. The small increases in CO2 from man-made sources have so far been beneficial (increased crop yields world-wide) and there is no evidence they are increasing overall global temperatures. This hoax is nothing more than another UN effort to transfer global wealth from wealthy counties (including Australia) to third world countries.

****

Goodwin, Clark

I am an agriculturist and regard CC as the greatest global scam!

****

Goullet, Eral. NSW / Sydney

Journalist and marketing consultant

I have no scientific knowledge about climate change – hardly necessary when there is so much information available from people well qualified to explain and comment but I am VERY keen to see the tables turned on this ridiculous new "religion" and all the virtue signallers who follow it. Could we at least spread the word that CO2 is a trace gas and the more we get rid of it the poorer our crops and other produce will be.

****

Graham, Garry. NSW / Coffs Harbour

B.AppSc. (Natural Resources), CCAC, Dip. Ed (Science), CSU, Grad. Cert. Sustainable Agriculture, CSU.

Engaged in teaching secondary science, HSC Biology and Investigating Science plus teaching HSC Physics, Agriculture and Food Technology (I have been an HSC marker for the latter two subjects), as well as junior science and technology subjects.

I am sceptical of AGW because in short, the evidence refutes the scaremongering. The motives behind the AGW myth are not scientific or environmental but political and ideological. My personal primary interest is in the benefits of CO2 to the biosphere. I believe that more atmospheric CO2 will

not only make things better for the natural world but will also assist us to feed the growing human population.

I support ongoing coal and gas generation, given our abundant reserves of these high quality, energy-dense resources: resources that can help lift people around the world out of poverty. But I also support nuclear power for its efficiency in producing reliable, stable electricity.

I am not a climate scientist. I am a science teacher with experience as a fisheries biologist and food technologist. I also did some post-graduate study in agriculture a few years ago which included units of study in climate change (despite being the lone sceptic in the class, I still achieved a Distinction) and ecological "sustainability".

I have previously been an environmentalist and even stood as a candidate for the Greens in the NSW State election in 1995 (an experience that cured me of any desire to enter politics). Following my conversion to Christianity in 1996, my world view is now strongly conservative. I am cognisant of the shift in our society as we lose ground in the culture wars that are degrading the foundations of our civilisation. AGW is one arm of the activist machine that is at work against us.

I understand the basics surrounding the complexities and uncertainties of climate systems and the issues used to promote the mythology of AGW. I have followed the global warming ~~hoax~~ debate for many years and have examined the issues from many aspects. I am a keen but passive follower of luminaries such as Mark Steyn, Jo Nova, Jennifer Marohasy and Anthony Watts.

In my teaching, I am forthright in my scepticism towards AGW. I ground my students in the principles of critical thinking and scepticism as foundational to the scientific method, always reminding them to "follow the evidence". I also expose the limitations of science, especially in relation to the dangers of unethical behaviour and the various examples of hoaxes and falsification of scientific evidence that hinders the progress of science. AGW is a particularly rich deposit to be mined in this regard.

After reading of the Saltbush Club, I am heartened. I am not politically active (God forbid!), but am a foundation member of the Australian Conservatives, wanting to provide at least some moral and financial support to the cause of bring integrity and honour back to the political discourse in Australia. I am keen to offer my support to your organisation and the brave souls who will be prepared to take the battle up to those who need to be challenged. Our future prosperity and freedom depends upon it.

****

Grasis, Ivan.

Regional sales manager for an international company promoting and selling capital equipment to all regional steelworks, primary and secondary aluminium producers as well as to all Australian iron ore, black and brown coal mines.

I read Wes Allen's fascinating and informative book "The Weather Makers Re-Examined" – a critique on Flannery's book. ***I have read many hysterical claims newspapers have printed attributed to Flannery's views. I have also seen many TV interviews where he continued to spread the dire consequence of climate***

change. If I remember correctly Flannery claimed sea levels would rise some meters by 2020 yet I believe he lives or did live on Scotland Island.

I am a climate change sceptic and even before receiving Saltbush correspondence I was expressing my views to those who would listen.

****

Green, Tom. Qld / Agnes Water

Professional Swimming Coach. Coach of World Record Holder - Shane Gould. President Australian Swimming Coaches Association, 1970/80's. Pioneer of Swimming Pool Solar Heating NSW and Queensland Industry leader 1979 - 2006.

Quiet but strong conservationist and Vice President of ANSA (Australian National Sport-fishing Association) in the 1970's.

We do little to truly guide the climate - it has been its own boss since the world was born - eons ago. Keeping the balance is the trick we have yet to learn, acknowledge and plan successfully for tomorrow.

Keep up the excellent work Viv - you have and continue to enjoy an extremely wide following.

****

Greer, Robert. Tas

Former Chef / Real Estate Business Owner

In my 77 years wandering around this planet we call home I've seem dramatic changes in weather and I must say I'm of the belief that we are experiencing nothing but another natural cycle.

As for the use of renewables, what a load of codswallop … combine that with going from State produced and sold electricity to having the added cost layer of over 80 so-called retailers there's no wonder our power bills are sky rocketing.

We are indeed fortunate to have some of the richest Natural Gas and Coal fields in the world and all we do is sell to other countries who use it to help generate more pollution in one day than Australia can produce in a year so, if we closed Australia down completely it would still make no difference to the so-called "Man Made climate change"

From the research I have done regarding the Great Barrier Reef bleaching it seems the major cause is intrusion of fresh water during heavy flooding (as we have recently experienced) that drops the salinity below 25% and that kills the coral which will slowly return when salinity levels pass 25% once again.

****

Greig, Paul F.

Quality Control Engineer in the Packaging Industry.

I believe that climate change is happening, as it has for ever. I am greatly concerned that plans to push ahead blindly with renewable energy will cause much grief…we often hear that coal power generation is one of the greatest 'threats' to mankind, we regularly see TV shots of power stations belching

harmless but dramatic looking cooling tower steam into the atmosphere….we hear that a Labour government will subsidize householders for the installation of solar panels and Tesla batteries and give the impression that no longer will these households need to rely on 'dirty' power.

****

Grennan, Peter. Qld

Valuer - Valuer Generals Dept. Qld, and Norm Ryan Valuers on the Gold Coast. Extensive experience with development of flood plains.

I have never believed at any time that man controls this planet. Have questioned speakers on the subject, mentioning the 30 tide gauges around Australia used to establish the AHD (Australian height datum) and used for the Qld building act 1974-1994, checked with survey office, Deception Bay up 2cm Rockhampton down 2cm. Governments all over the world have this information. The oceans are stable and like Venice, land is sinking in a few places.

I liked the article by Patrick Moore, Global Warming Policy Forum 2015. See : http://shar.es/15Hfrn

****

Grimmond, Joe. Qld / Brisbane

BA – Industrial Relations. Worked in the Resources Industry from HR manger to employee relations director.

I have been doing archaeology at UQ now for a long time and climate change is natural, in fact a lot worse than what we are currently experiencing (if we actually experiencing anything unusual).

****

Grocott, Guy. Qld / Carindale

Recently retired consulting engineering geologist with 44 years of experience in the field of geotechnical engineering. y past and current affiliations include the following: Australian Geomechanics Society; New Zealand Geotechnical Society Incorporated including Chairman, 2000 -01, Editor Geomechanics News, 1983 – 1984, Secretary, 1982; Member International Association for Engineering Geology and the Environment; Registered Professional Engineer of Professionals Australia (RPEng Civil); Registered Professional Engineer of Queensland (RPEQ).

My motivation to join is as follows: Minor warming of the planet is merely confirmation of the fact that planet earth has experienced numerous previous episodic warming and cooling events in response to planetary and inter-planetary forces unrelated to anthropogenic carbon dioxide emissions. The current global warming alarmism is totally unnecessary and will be the cause of much-term destruction of our industrial base and energy systems.

****

Gummerson, Warwick. NSW / Richmond

I am sceptical because I was around when the fear was that the world would run out of oil, then that it would get colder. Then we had the Y2K bug scare which cost a fortune. We should have had no more rain since some decade ago, but the rain continues as before.

I've driven past the sign on the way to Muswellbrook that clearly says, "Water vapour" when approaching the big cooling towers that the TV calls "Pollution".

As a child I remember when the roads melted and when Central railway got so hot that the train line bent.

****

Guy, Pamela. Victoria

Grad Dip Bus Admin. 30+ years with the higher education sector working at a management level in Admin and IT

I believe the whole climate scare is a scam to instil fear into the wider population to control them. It is UN driven con so say for wealth distribution in actual fact it ensures the retention of wealth by the establishment and the elites! Raiding wealthy nations to make them poorer and controllable!

****

Hack, Kelvin, Victoria

Self funded Retired Businessman

I have been sceptical from the start and now cannot believe how much the propaganda has succeeded against all the evidence. Now we have 30 years of kids being sold this nonsense at school, we are losing the debate in spite of more evidence being produced each year. You cannot change a religious belief.

****

Haidle. Matt. NSW / Inverell

Marine Engineer

I am a believer in the weather cycle and that climate change is a part of that cycle. I believe that the cycle is influence by the solar system and planet alignment in relation to the sun. I like to go about my business quietly but it is apparent that some of the current information being tabled is not correct and influencing poor decisions by government and regulators. I would like to support change in making my contribution by influencing my children and family on what is right environmentally and sustainable.

****

Hall, Jeff. Qld / Brisbane

How do I join this group of sensible people ? You have my flyer, stating a few facts on Global Warming ... I hand delivered 30,000 of them around Brisbane. Yes, I know it`s a tiny amount, but it is of some use.

If you have lost it, let me know and I`ll replace it - I hope it serves as qualification to join the group.

****

Hamilton, Don. – awaiting details

****

Hankin, Bill. SA / Mt Barker
Organic farmer in Victoria & S A

I was until recently a passive supporter of the CO2 Global Warming theory, but earlier this year I started reading and studying the evidence from multiple sources and came to my own simple conclusion that this hypothesis is a sham. Warming is happening in my region of the Adelaide Hills - a bit. But it is not a consequence of global CO2 emissions. In a Facebook page I administer called Mayo for Mayo, I have been putting forward this newly discovered views and meeting great opposition from ideological "Greenists'.

****

Hanley, Nigel. Vic / Geelong

Music and Jazz degrees – engaged in the music industry.

****

Hannigan, Larry. Qld / Murgon

Survey Draftsman.

The climate has been changing forever.

****

Hanson, Annie.

My university has been the one where one has a dream, jumps off the deep-end and learns to swim amongst the sharks. Wanting my own business goes back to being a 12y.o. – and I have been running one since I was 22, employing upwards of 150 and specialised in Plant removal, relocation and installation.

I am a firm believer in Free Enterprise and the right of an individual to 'have a go'.

To have done the homework and be prepared to take the risk - to endure the 24/7 long hours and the 6 or 7 years when one day you realize that your 'dream' is now a fully functioning entity - what a buzz that is – the whole of society reaps the benefit.

My concern today is for the future of the engine room of the economy – the producers – these are the manufacturers, the growers plus the thousands of suppliers and the service industries and small retailers that support them - and the list goes on and on even to the dog wash ! The energy costs / dysfunction pressures on business today due to the climate change / global warming conspiracy combined with the potential policies of Mr Shorten are and will be nothing short of a disaster for Australia as a whole.

Business just wants to get on with (and should be able to get on with) what they are good at.

****

Harding, Cliff. WA / Arrino

BSc (Eng) in Mining Engineering UNSW - 53 years in the mining industry including dry land farming of crops and sheep for 30 years.

The absence of science based evidence to support the claims made by climate change supporters has them relying on emotive nonsense. If they were dinkum they would be demanding nuclear powered electricity.

****

Harmers, Jason

****

Hart, Paul. NSW / Murwillumbah

Teacher's Certificate - Science Teacher (Years 7 - 12)

Have studied and taught Scientific Method and planning of experiments , science history and debate.

Climate change takes millenia to occur after overcoming homeostasis and including continental drift and many other factors , weather can change from day to day and decade to decades.

Dr. Patrick Moore makes a very pertinent point that CO2 levels in the atmosphere over the history of the earth have been '4000 ppm at one time and 2000 ppm at another time and still 1000 ppm at another time and then during the Pleistocene rose and fell from about 190 ppm to 280 ppm numerous times, why is 280 ppm, the pre-industrial level considered some kind of benchmark level? Further more it is suggested that below 150 ppm plants starve and die off so it could be considered that at 280 ppm just 130 ppm above starvation level is really placing most plants under great stress.

Have read Patrick Moore's book "Fake Invisible Catastrophes and Threats of Zoom" and along with my own observations - range of temperatures is less on a cloudy / rainy night than on a clear starry night, yet the amount of Carbon Dioxide remains the same. Climate is cyclic over the geological periods that life has been on earth.

****

Hartley, John. Qld / Cairns

BSc. Exploration Geologist, Australia, Papua New Guinea, Indonesia, Malaysia. Wide variety of target metals and very involved in feasibility studies and generation of ore resources based on correct statistics. Considerable expertise in design and supervision of deep diamond drill holes. Authored a popular text book on drill-hole management. Published 26 professional papers and authored several Qld Mines Department publications. Played major role in the following projects, Porgera, Frieda, Thalanga, Youanmi, Mt Morgan, HYC.

Consulting since 1992 and as well as geology was a qualified Asbestos inspector/ removalist and with a partner(a chemist) did a lot of contaminated site inspections/ restoration. Operated a small underground tin mine near Herberton with 3 partners (in one month this mine produced most tin of any Australian mine)

Geological processes such as plate tectonics, compaction of deltaic sediments or deposition or intrusion of volcanic debris or lavas can have locally far greater effect on rises or falls in sea-level.

****

Hartman, Anthony. NSW / Sydney

Economics and Law, Legal practitioner, Corporate Finance, Private Equity Operator and Director of Strategic Capital Management.

The pushers of climate change frequently find themselves hoisted by their own petard; their reasoning - always flawed - is betrayed by numerous holes and inconsistencies in their 'research'; it has become one of several determinants of whether someone is a 'good person'; and the cost of blindly following their frequently issued and always changing goalposts (take a bow Thunberg, Flannery et al) will destroy society. When a deadline is breached, they simply revise their deadline. This brings me to the ultimate conclusion about the unscientific agenda behind climate change, which is to subordinate the individual and dismantle society and replace it with a soclialist utopia.

****

Hay, Greg. NSW / Urunga

Business owner, Robotics, Product development etc

I am a Paris exit supporter. Also interested in the geology & origin of water, ref "A Voyage Of Discovery" by Dr Lance Endersbee. Climate change is a tax!

****

Hayse, Alan. Qld / Southport

Chartered Accountant.

My Scepticism is based on the fact that all the believers have is predictions, not facts, and those predictions have proven unreliable at best, untrue at worst.

While I have no qualification or experience in climate science, I read and research and have not been brain washed by the believers. My major concern is for the future of my Grand kids and their kids as I believe that the brainwashing in our education system is so entrenched that our future leaders will not do anything about our energy situation until we are literally "in the dark".

****

Heathorn, Ian. Tas / Hobart

50 years working in Primary Industry - Motor Mechanic / Farmer / Fisherman / Seafood Exporter.

I am sceptical of the climate scare because there is no proof, it is only what makes people feel good thinking they are saving the world.

****

Hemingway, Michael Anthony. NSW / Mount Colah

Started life as a molecular biologist at Biotechnology Australia Pty Ltd. My BSc majored in Biochemistry and Genetics, then decided to move to business. Joined Westpac as Grad trainee. Worked in sales and trading in Interest Rate products, from sales of bank bills to trading of interest rate options in New York City and London with Westpac. In NYC, I was Head of IR Options (Trader) and in London, Head of IR Derivatives Trading. Moved to NAB Director Derivatives Sales, then product development, then business management, then market analysis

I am sceptical of the climate scare because there are too many holes in the research (theoretical outcomes varying wildly from observations), too much misinformation perpetuated by the zealots, far too much suppression of dissenting scientific voices (e.g. Prof Ridd) and when one looks into the evolution of the "climate change religion" there is, to me, endemic corruption from the beginning of the IPCC (with Stone et al) if not before beginning at the Agenda 21 meetings and the global Marxism movement.

****

Henderson, David. Qld / Glenwood

The University of Life. 20 years with RAN Fleet Air Arm; 7 years fabricating radar antennas with Interscan Internationall. Followed by a few years at Sydney Esoteric Bookshop, Quest Book Distributors, Specialist Publications.

For the last few years have been engaged in voluntary work as a Mentor with Morya Federation (an online esoteric college), esoteric classes at home for a small group and proof reading for *The Wentworth Report.*

"The only constant is change." I believe the Earth and all other life on/in it is constantly & slowly evolving & therefore changing, and I see nothing in this to be concerned about – it is natural.

****

Henry, Vaughan. Qld / Brisbane

Diploma Financial Planning – engaged in finance and wealth management

Why am I sceptical of the climate scare? Well the masses also believed the earth was flat!!

****

Henschke, Mark. NSW / Sydney

B Sc University of Adelaide majors : geology palaeontology; MBA Australian Graduate School of Management, NSW

Engaged in Mining and oil and gas exploration in Australia, Peruvian Amazon and SE Asia and the finance industry including project finance for power stations, infrastructure and mining.

I am sceptical because geology taught me about the history of the planet, and palaeontology about the evolution of life. The latter is inevitably entwined with the history of the climate of the planet. With that background the climate alarmist proposal never made sense to me, given the massive variations in the earth's climate before the most recent significant ice age of 10,000 to 15,000 years ago. Over the last 1 million years alone, there have been something like 15 to 20 events with temperatures swinging by 10 to 13 degrees centigrade. Humans at the time did well to have a camp fire ! Go back another 400 million years or so and it gets hotter and hotter …..

Authors like Ian Plimer and Bob Carter have been influential

****

Hickman, John. QLD

Why am I sceptical of the climate scare "Follow the money"

****

Higgins, Rodney. Qld / Gympie

Teaching English as Foreign Language - TEFL, WH&S Cert, First Aid Cert.

Organic & Sustainable Farming & Marketing, Transport Industry Service Operator, English Teacher in East Asia for over a decade.

I grew up on the Hawkesbury River in NSW on a commercial citrus farm and saw the river degrade over decades from one the most pristine rivers to become sign posted with "Poison" and a Skull & Crossbones every 200 metres on both sides, choked with survivor plants, until erosion from unchecked industrial waste and rampant recreation by the rich! Still today the true potential of the Warragamba Dam and it's tributaries has been totally a political football of incompetence. I know and have explored every tributary to the Hawkesbury throughout my childhood and early life and later working life to see and know how it has become brings me to tears today. But there is a vast natural treasure there they have not been able to penetrate so far, that only indigenous people have ever been able to settle in, gives me some hope; Wollemi National Park. People and land-care management are the problem – not global warming.

****

Hipper, John. SA / Adelaide

B. Arch (University of Adelaide)

Project architect currently working in tier one in Adelaide. Specialised skills in technical construction and BIM project delivery techniques.

Sifting wheat from chaff is as essential to maintaining our civilisation as it ever was.

The geologists and solar and atmospheric physicists listed below are pointing to the next 30 to 50 years being a protracted period of subdued solar activity resulting in increased cloud cover and climate cooling in the range of a Dalton to possibly Maunder minimum contrary to the CO2 alarmist theory. I have formed the opinion they are likely correct.

"The Great Global Warming Swindle" circa 2007.

Heaven and Earth (thanks to Prof. Plimer)

Richard Mackey outlining Prof Rhodes Fairbridge and James Shirley's work on SIM.

Prof. Charvatova's and Prof. Zharkova's work on SIM, climate and the Solar Dynamo

Prof. Henrik Svensmark and team's work on the sun's influence on GCR driven cloud formation in the lower atmosphere, earth's albedo and temperature.

****

Hitchcock, Ian. NSW

Diploma Building Sciences. Property and construction specialist in the public and private sectors.

Eurobodalla Regional Coordinator for the NSW Coastal Alliance which is focussed on the protection of the property rights of coastal residents that are being undermined by NSW coastal management legislation and climate change hysteria.

****

Hoare, Rod. Vic / Rye

HNTD in Mechanical Engineering Engaged by 5 multinationals. Business owner and MD of 15 companies involved in Agriculture irrigation, production and processing. Extensive government lobbying experience.

I am sceptical of the climate scare because there are no proven facts and the modelling is floored as too many variables. With a lack of critical thinking in modern western society It has become a religion and a way to exert power and control society.

****

Hoffman, Dr Robert.

Work history: Software, Banking and now Medical Practitioner

"Climate changes and CO2 is a greenhouse gas but after 30 years of following this issue I have yet be convinced of two things, that we are a significant factor in any warming and why any warming is considered a disaster in any case."

****

Holliday, John.

Air Radar fitter for the RAF, worked for IBM then started building businesses (entrepreneur) and more recently, authoring books.

I have been a sceptic on the subject of Climate Change ever since I was invited some 15 years ago to listen to a talk by the late Professor Bob Carter at a Chamber of Commerce function in Tweed Heads. I had never thought much of the topic before but I was surprised to find the event being picketed by people with placards, trying to stop us from listening to this man. That raised questions as to what possibly could be wrong with listening to a university professor. From then on I purchased books, referenced web sites and attended similar lectures to learn what all the fuss was about.

****

Holmes, Dr Robert Ian

PhD in Climate Science – one of the best qualified and most knowledgeable climate scientist in Australia.

Shortly, I will be publishing a book called "climate science the IPCC forgot".

It will include many excerpts from my PhD thesis, which totally destroyed the IPCC reports, using new science as well as 500 references to the existing scientific literature.

<u>To cite my published climate papers;</u>

****

Hughes, Neville. Vic / Geelong

ACIS AGIA. British Army The Welch Regiment 1948-1956, Front line infantry Sergeant Korea 1951-52. Lieutenant 1953-56 in Hong Kong, Germany. Family Ford Dealership 1956-1959 in Brecon, Wales. Migrated to Australia. Pilkington Brothers Australia Safety glass manufactures - Deputy manager South Australian factory, then Company Planner at Geelong head office.

My Political roles:

- I have been a member of the Liberal Party of Australia for 50 years.

- Victorian State Director of the Victorian Division of the Liberal Party of Australia 1977-1983

- Ex-Director Private Hospitals Association 1984-1992.

- Senior Vice President of the Board of Box Hill Teaching hospital Melbourne. 1992-1994

The climate scare? - read my paper " My view on winning the next election" by Neville Hughes January 2019.

****

Hurst, Ric. Qld / Greenwood

QBE in agriculture (grains & sheep) Crude oil production.

I have cynical views on climate change and see the bushfire events as nothing to do with any climate change but a result of changed environment ...being the halting of many indigenous fires and the introduction of annual grasses, which ephemerals dry to tinder in summer. Western Australia roads touted as ribbons of green are in summer are actually linear fuses of tinder dry grass. Combine these factors with changing demographics, tree changers and a failure to use sheep effectively to graze fire risk grassy fuel loadings - then add a learned helplessness in the populace and it is no wonder there is currently a bushfire disaster.

****

Houston, Geoffrey David. Qld / Diddilliba

Phd (Physics), Monash.

On completion of my PhD I joined the research lab at Kodak in Coburg. We worked on photofinishing systems and improving the quality of paper and prints. I encountered the green-house theory and believed it was an explanation for the apparently steady temperature rise from the 1970's to the early 2000's. I vigorously defended green arguments that we need to curtail greenhouse gas emissions up

until 2009. Around that time I met an engineer who introduced me to sceptical arguments involving things like carbon sensitivity and alternative explanations for the changes in the world's temperature during the last 30 years. The more I investigated the issue the more sceptical I became. As a consequence, I concluded that the left side of politics, until then my natural home, had been dishonest.

I am a regular at Jonova's blog and WUWT. I am appalled at the flock of sheep that is the Australian electorate and at the abuse of truth executed daily at the ABC. I would be proud to join Saltbush. Even prouder if we can move the debate toward rationality.

****

Inglis, Jim. Qld

Farmer, Grazier, Construction & Design.

Having lived and worked in extreme conditions as well as being aware that from known existing benchmarks going back 70 years sea levels have not risen relative to king tides. If anything, Sea Levels are lower now than they were then.

****

Jackson, Graham. Vic / Melbourne

BSc Applied Chemistry. Import and distribution of specialised Aluminium mill products.

Participated in sub committees of both the National Standards Commission and NATA and became very interested in the role of measurement in the national economy, with particular reference to the practical and legal implications of chemical and metallurgical measurements.

My experience gave me a high regard for the technology of measurement with regard to it's industrial and legal importance.

****

James, Lorraine.

****

Jarret, Wayne.

Worked in local and state government agencies, engineering and environmental consultant companies and specialist roles within the development industry and resources sectors in Australia, the Middle East and Asia Pacific. Experience in the environmental, social and regulatory disciplines within the mining, oil and gas industry, including direct experience in projects in Australia and abroad from pre-feasibility to production.

Being a passionate sceptic in regard to the climate projections supported by governments, industry, NGO's and professional institutes, I would like to join the cause against.

****

Jemison, Michael. NSW / Sydney

Engaged in the Beverage industry

The comments made by those who espouse what they believe is manmade climate change, are made on the basis of 'motherhood' beliefs and not science. Those

same comments are emotive, lack scrutiny and repeated by the media because it is an easy story.

****

Johnston, Chris. New Zealand

BA (Maths) BCom (Economics) BSc Hons (Statistics and Operations Research)

Worked as an Information Technology / Data and Analytics person in New Zealand, Australia, United Kingdom/Europe. Programme/Project Management, Consultant

I am sceptical of the climate scare because:

1) After 30 years of just accepting the need to cost pollution (and hence carbon emissions) I wondered where the graph was of previous predictions and what occurred hostorically.

2) I read the IPCC Technical Section and became an instant critic as I saw that they were not seeing the wood for the trees and their methods were inappropriate to judge whether what they were doing was either effective or necessary.

3) Reading a bit more I discovered the Nikolov / Zeller work, the Irish Connolly's and Pat Frank and I wanted to know what the NZ government scientists and policy people thought of these studies which seemed to me to have a quantitative way of quantitatively striking at the heart of the key assumptions of the IPCC.... from a "back of an envelope" point of view compared to the massive simulations being run on super-computers.

- These OIAs (Official Information Act requests) established that NZ officials were not doing their own due diligence and had quite a defensive stance to anyone asking questions.

- This finally convinced me that this is all a very big waste of time and money.

4) Submitting the Select Committee for the NZ Zero Carbon Act 2019 showed me that even with 4 hours of Nikolov's effort on my submission - there was no way any MP or official was listening.

- They are swept up in the current driving the wave of hysteria to the sandy shore.

- The only way to fight it is politically by either/and:

- Getting the message to the public - over the heads of the media and politicians.

- Dis-establishing the institutions and the funding streams that feed the captured/group think scientists.

- Re-focusing the debate to be on the life-cycle of materials rather than climate (even where incineration is better than recycling).

****

Johnstone, Blade. Qld / Victoria Point

Cotton Classer/Sales & marketing to middle management level / Share farmer / Lawn mowing-landscaping

I am sceptical of the climate scare because I see the manipulation of the general public by parties political and private using both flawed science and ideology for personal gain frequently financial.

****

Jones, Dr Garry. VIC / Melbourne

B.E. (Hons) Electrical Engineering, PhD, MBA, FIE(Aust) CPEng
Australian Paper and predecessor companies – engineering, business and process development, management.

I am sceptical of the climate scare because the raw data does not substantiate the claims – raw data shows no statistically significant warming or sea level rise and the historical record shows several warmer periods and higher sea levels in the past 5000 years.

****

Jones, Christopher. Qld

Sales, management, owner of a wholesale supply business.

I am sceptical because I can see that the money people are pushing it.

****

Jones, Michael.

****

Jones, Hugh. NSW / Tea Gardens

Production Manager Petrol pump manufacturing

Over the past few years I've looked at historical data and made my own spread sheets and trend lines which do not agree with the predicted climate change analysis. Consequently I am very sceptical of the claims. In my opinion a few more politicians need to be truthful and speak out but they are obviously concerned about the climate change mantra from so many people.

The biggest problem I believe is the news media. If only they would start to review the data and have discussions from both sides of the fence. There is definitely a reluctance by many reporters to question the data. Especially in the ABC! I believe this is Australia's biggest problem which has to be overcome and then we might have some politicians who are non believers come on board and speak out! The path Australia is taking is suicidal and commonsense has to be pursued!
One can only hope! Good luck and don't give up!

****

Jones, Jeff. Qld / Brisbane

Auctioneer, Real Estate Agent

I am sceptical of the climate scare because like many others, I realise that: "The science is not settled!!

****

Jones. Michael. WA

Retired after 40 years in local government, mainly wheat belt shires

I am sceptical of the climate scare because the climate is always changing – that's Earth's history – the scaremongers have got out of control - just another way for the and urban greenies to get control of us all.

****

Joyce, Peter C.

B Commerce – teacher and business consultant with local and international experience working with major international companies. Director and board member of many public organisations.

I am sceptical because I understand the basic school-boy physics of our planet, solar system, galaxy, and universe. All are dynamic (not static) and forever evolving. Our problem is that we have too many people trying to occupy this finite planet; and they find themselves spreading into regions that have always been both marginal and environmentally dangerous. All power to the Saltbush Club.

****

Kairys, Adrian

Contract builder / floor layer

I am sceptical of man-made climate change as the earth has been changing since creation.

****

Kalmanovitch, Norm.

I looked after Husbay Oil (Australia) geophysical operations based in Perth from 1978 to 1982

My credential are established by the fact that my straightforward comment was able to trigger this sort of response from "Mr. 97% consensus" John Cook on his Sceptical Science website: https://www.skepticalscience.com/argument.php?a=161&p=3

What makes climate fraudsters so afraid of me is that everything I state is fully backed by empirical data, all of which refutes the "climate change nonsense" founded entirely on the fabricated output from computer models, and in the practice of science; empirical data trumps everything.

If the nonsense of CO_2 emissions causing the 0.3°C/decade of warming in the 21st century stated as 'business as usual' Scenario A in the policymakers summary for the 1990 IPCC First Assessment Report the "business as usual" increase in CO_2 emissions over the past 18 years should have caused at least half a degree C of warming.

Under the IPCC Business-as-Usual (Scenario A) emissions of greenhouse gases, a rate of increase of global mean temperature during the next century of about 0.3°C per decade.

****

Kamp, Ron. Qld / Brisbane

Had own business supplying high tech nickel alloys, titanium, zirconium, in the forms of pipe, fittings, plate, fasteners etc to large companies involved in industrial production processes, power generation, petrochemical, metallurgical etc.

I am very concerned about the cost to the public and economic damage of proposed climate policies without proof of benefits/outcomes. There will be a massive transfer of wealth to other countries as our industries shut down. Most of the industries I once supplied to are facing the biggest threat: Coal and Gas fired power generation, Aluminium Smelters, Fertiliser Plants (eg Incitec Pivot), Petrochem/Refineries and Engineering Contractors who build/maintain process plants.

I wish to be kept informed of the facts and articles by experts so I can argue effectively with those who, for want of a better description, have been brainwashed or browbeaten into following the climate change mantra.

****

Karlen, Wayne. Qld / Hervey Bay

BSc Geophysics, PGeoph (APEGA) - Australian/Canadian geophysicist & petroleum/energy engineer engaged in oil & gas exploration/development/production and optimizing technical and commercial concepts to bring power to remote communities in developing countries.

"Currently consulting as well as spending a lot of my time promoting real science which clearly debunks the IPCC and climate alarmist ideology".

My current focus is to get Dr. Salby's recent presentation on destroying the AGW alarmist ideology more widely recognized by the general public and completing my personal due diligence of recent findings in solar physics which is quite disturbing.

****

Kealy, Leonce

Honorable Member of the Electors' Parliaments of Australia

****

Keen, Greg. Qld

Electrical Contractor and Lic. Electrical Fitter & Mechanic.

I believe that anybody that has done their own research will quickly learn that this one sided argument is set up on flawed climate models because the only model worth looking at is the Russian one. These people are not about climate but about money. It says a lot that both sides of our government have joined with them to scam taxpayers.

****

Kelly, George. NSW / Terranora

Small business owner ,electrical industry. Currently president of the Tweed Heads branch, TRUE BLUE PARTY AUSTRALIA.

I am a moderate and just dismayed at the nonsense that a small percentage of our population has been able to force on us all.

****

Kennedy, Brian. Qld / Albany Creek

Diploma in Aquaculture, Diploma in Banking. Worked with Westpac when it was known as Bank of New South Wales, joined Nabalco (Bauxite mine) and worked at Gove for seven years, owned and ran a motel, worked for AMP Society for five years and have spent the last 33 years working in Commercial Real Estate.

Top Writer in Quora on Antarctica (2018). Read NY Times, Courier Mail daily, visited numerous countries and six continents. Dislike the Greens and politicians who put tree hugging ahead of their constituents real needs and like to think I have my feet on the ground.

I am sceptical of the climate scare because I think the world has been hoodwinked by the likes of Al Gore and his inconvenient Truth. His version of climate change has proved to be an exaggeration and that's understating the position. I think having film shots of people sitting at desks under a couple of metres of sea water as they did in the Maldives to show what climate changes will do was a good example of the extent that climate change believers will go to in order to state their case.

Of course if you go to the Maldives today it is <u>not</u> 2 metres under water.....in fact it is just the same level as it was when Gore made his documentary.

We need sensible commentary on climate control. We don't need the Paris Accord as Australia will receive no benefits here, but it will receive a hefty cost to the taxpayer and the general electricity consumer whilst the countries that continue with thermal power generation such as China and India will continue on unimpeded. Been to Beijing lately...if you have you will know what I mean.

****

Keogh, Fintan. Brisbane & Tenterfield

BA Risk Management & Energy Policy Background.

"It is difficult to get a man to understand something when his salary depends on his not understanding it". Upton Sinclair

I apply this to the entire Australian Public Service. Words neglected in relation to renewable energy - intermittency, ambient air temperature in relation to photo voltaic generation.

****

Keran, Paul. Qld / Brisbane

Chemical Engineer

I consider that the science and human impact on world weather variations is unclear.

****

Kernohan, Bob.

I thank you for going into bat, as it were, for the majority of average Australians who support your cause.

Successive governments here in Australia have 'gagged' the average Aussie for 30 years on this issue.

I have been sharing SATLTBUSH CLUB on social media and am wondering if you could provide a link to make it easier for supporters to join.

****

Kettermann, Karin. Vic

I have done a lot of research on this subject to know it is a scam invented by the UN for wealth distribution.

There is so much to say about this but this but this is not the place to say it all.

****

Keys, Jacqueline. Qld / Brisbane

B. Bus (Acct) QUT, CPA - Self employed business person for 20+ years, currently a Financial Controller

It is clear that the earth's climate has been changing for millennia. Antarctica was once a green and fertile land full of forest. Humans have evolved to adapt to any climate change that has occurred. Even if you believe the concept that carbon dioxide is contributing, if only 4% is human activity, of which Australia is 2%? Why would be sacrifice the economic prosperity of Australia for an ideological religion?

The left are determined to ruin the values and culture that has enabled the Western Civilization to thrive. They will do so at all of our peril. We must properly educate the community instead of feeding these lies and half truths to the ignorant community, via left wing media and the like.

****

Keys, Will. Qld / Brisbane

I listened to Hugh Morgan talking on 4BC about the excessive cost of the Climate Change Hoax.

I would like to join your Club with a view to becoming more activist for the Conservative side of politics.

****

Killeen, Dr. I. Doug. Vic / Southbank

B.Sc. Agrculture (Sydney University), PhD (Sydney University) in reproduction physiology. Employed with the NSW Department of Agriculture as a Sheep Research Officer at Leeton, NSW. While with the Department, he was seconded to the Department of Animal Husbandry, University of Sydney, to do a Ph.D. in artificial reproduction technology. Consultant in Artificial Breeding and part owner / Technical Director of a company manufacturing and distributing artificial breeding products.

I am a sceptic because the believers in CCC and CGW are really climate deniers and avoid debating the science, there is such a poor correlation between atmospheric CO2 and Global temperate over the last 150 years and the climate predictions about CCC have proved to be so wrong. The believers in CGW and CCC have substituted debate and discussion with propaganda and obfuscation.

BoM actual temperature records for Australia hardly changed during the 20th century and when BoM changed the electronic measurement in 1990's the temperature suddenly started to rise. Also they have "adjusted" (their word is homogenised) the records in such a way that they show an upward trend since the early 20th century. The BoM have failed to publically explain these issues and just claim they know what they are doing.

The believers spread the widespread false belief that by Australia unilaterally cutting emissions, we will stop droughts, floods, fires and cyclones, save the barrier reef and Kakadu. Whatever Australia does will do nothing other than virtue signal. If you tell a lie and keep repeating it, it will eventually be believed!

****

Killion, Neil Francis. NSW / Sydney.

Qualified in Psychology and Human Resources, founded and ran my own outplacement company in Sydney working on behalf of many of the country's leading private and public sector organisations. My wife also worked in the business as a business manager and counsellor.

I always suspected that the whole climate change industry was a sham and a fraud, but my views became crystallised when I started watching 'The Outsiders' and reading Ian Plimer's wonderful book Climate Change Delusion And The Great Electricity Rip-Off. I have also read some of Jo Nova's blog and now I am energised about representing my views.

****

Killion, Kathleen. NSW / Sydney.

Business manager and counsellor in Psychology and Human Resources advisory business.

I always suspected that the whole climate change industry was a sham and a fraud, but my views became crystallised when I started watching 'The Outsiders' and reading Ian Plimer's wonderful book Climate Change Delusion And The Great Electricity Rip-Off. I have also read some of Jo Nova's blog and now I am energised about representing my views.

****

King, Andrew. NSW / St Mary's

Manufacturing Engineer, 25 years as a Manufacturing Engineer Design development Production mainly in the timber and mining industries.

I am sceptical because nothing in the climate scare makes logical sense – too many lies in the media, the political establishment and the bureaucracy with it's hidden treaties and objectives of wealth redistribution.

Billions spent on windmills and shiny solar panels but little on practical R&D on real power generation sources like Conventional Nuclear reactors, Molten Salt Reactors, Clean Coal (Carbon Dioxide is not a pollutant) and others.

Nothing built in Australia all imported from China - what a waste!

****

King, Brian. NSW / Sydney

BA (science) degree Macquarie Uni, Sydney. 25 years Managing Director of family food import business.

I have an active interest in science and business. Highly sceptical of left push to global government and all of the issues that go with that, global warming, refugees, energy sources etc.

****

King, David. NSW / Sydney

Advertising Industry

Why am I sceptical of the climate scare? Read these 3 books: TAXING AIR, CLIMATE CHANGE THE FACTS 2017 and MIRRORS AND MAZES. You'll be assured that nothing abnormal is occurring.

****

Kirby, Peter Terence. UK / London

Worked 40 years in local government. I am a qualified member of the Institute of Purchasing and Supply. I am a subscribing member of the Global Warming Policy Foundation.

CO2 has increased by 1 molecule in 10,000 molecules of atmosphere since 1900. Is the climate of the earth so delicately balanced that a change of one molecule in 10,000 can cause global warming? I think not. Mankind is being misled.

****

Kirby, Doug. WA

Experienced 24 years as a geological field technician.

I am sceptical because the Global warming "science" has never made the basic proofs whereas the geological record is proof that there can be no run away warming else it would have happened very early on or during one of the many other eons with high CO2.

Concerns - destruction of our economy, freedom and sovereignty by a malignant bipartisan political agenda.

****

Klemm, Kieran. Vic / Eldorado

Sixty years working own farm and work on theory, "Prepare for the worst and hope for the best", no two years are the same; Climate Variability, always has been and always will be.

I learned many years ago that you control people with fear. In my lifetime some that I recall; the blockade of Berlin (1945), the Cold War, the threat of Nuclear Holocaust, the oil crisis of the 1970's, the hole in the Ozone Layer, the Y2K bug, global warming, climate change, climate emergency, 90 seconds to midnight.

The fact that NASA started to manipulate their temperatures when they were subject to vice president Al Gore, and our own BOM needed to adjust their past extreme temperatures to fit the numerous computer models they use. The so-called climate scientists still upholding the hockey stick graph even though person

responsible could not provide any supporting evidence to prove same in a recent Canadian Court Case. I am not sceptical, I just don't like lies or liars.

****

Koenders, Simon. Vic / Glenroy

IT management. Network Systems Manager.

I do believe that the climate is changing (up and down) but I don't think anything that governments around the world do will make any difference. Rather I believe it is a scam to control populations and redistribute wealth to the rich while nations suffer - the IPCC is screaming the sky is falling and we only have 12 years to make these changes yet we have China and India building coal fired power stations like no tomorrow and our government is too weak to even build one as the general population has been brainwashed.

Also the whole idea of carbon dioxide ruining the planet is questionable - if it was such a dire issue land clearing and logging would have to be stopped yesterday to avoid the "disaster" we are heading towards - everyone selling this scare campaign are hypocrites - solar and wind do have some merit but coal is still the way to go for this country until these and other options are viable without being propped up by subsidies.

****

Krahenbring, Tracey. Qld / East Greenmount
Self employed/part time cattle producer and also Youth Worker

It's all just a farce. A money making racket, brainwashing the people into believing their lies. The climate changes constantly and has done so forever. It's just part of the universe. Time to open peoples' eyes and minds as to what is really happening in the world.

****

Krueger, Paul. Qld / Elimbah

Tradesman, Vehicle Mechanic. 31 Years Aust. ARMY.

The climate has always changed. Humans have made no impact on that change. If there was no climate change, the dinosaurs would still be here and the human race would not have evolved.

****

Laird, Judith. VIC / Anglesea Victoria

I am an ageing retired widow and the media promotion of so called climate change terrifies me. I remain unconvinced by the arguments and cannot believe that so many people are so stupid as they blame everything and anything on climate change.

I live in an extremely prone bush fire area and it is a constant battle to overcome the propaganda of the greenies and at least get some protection by proper management of the huge national parks which are a feature of this part of Victoria.

I was alerted to the Saltbush Club by your excellent article in the Australian re management of our bush. I am so delighted that people are making an effort

to take a stand against the insanity which seems to prevail particularly in the media.

****

Lahti, Jarmo. WA / Perth

I am a now retired life-long underground miner. I did study mining engineering for a few years but decided engineering was not my preferred path & took the hands on mining/management route. I have worked in every Australian state except Victoria as well as NZ , Indonesia & Philippines over a 40+ year career. I have run & managed many mines mostly as a contractor - see my LinkedIn profile.

The current UN instigated climate change caused by humans is the biggest scam to hit the world since the Y2K bug which enriched many in the IT sector.

If there is any contribution I can make to unravel this scam I will be happy to oblige.

****

Lamou, Jeff. NSW / Southern Highlands

Thanks for setting up the Saltbush project, we badly need a sane voice in the climate hoax.

****

Landherr, Stefan. SA / Banksia Park

I was a founding member of the “No Carbon Tax Climate Sceptics Party” way back in 2009 which _nearly_ had a senator elected. Hope the Saltbush Club can do better.

****

Langby, Fred. NSW / Warren

25 years in rural agriculture supply

We have too many people pushing agendas and not listening to the facts.

****

Laux, Peter. Vic / Barry’s Reef

Locomotive Driver

I’m not sceptical, I know it’s an utter absurdity, it’s 3 Hypothesis’s cobbled to a Theory !

****

Law, Robert (Bob) David. WA / Freemantle

I am qualified as an architect in NSW and have a post graduate diploma in housing and neighbourhood planning from the UNSW.

Worked for various private firms and project builders on projects ranging from individual houses to industrial developments, schools and office buildings, and for the WA State (land use and development) planning department in the fields of urban planning and development with an emphasis on major central city projects. Since formal retirement from the above worked part time in retail and in an organisation for helping people with dependencies, mainly alcohol and other drug, 1998 to 2011.

I have been highly sceptical of the climate scare since it first began to have wide currency during the 1990's (and before) and regard it as a complete unscientific and totalitarian fraud promoted by the UN since its inception (in order to facilitate global control) and which will (and has and is) lead to widespread poverty and worse.

For Australia, it will (and is) lead to the de-industrialisation of the country and the impoverishment of its people. The climate change fraud has to be considered in tandem with other UN promoted global control agendas.

****

Lay, Barry G. Vic / Wallen

B. Commerce, Dip. Ed, TPTC. Secondary school teacher and Deputy Principal with Victorian Education.

I have followed the topic for many years and after reading many articles and books I cannot believe why our politicians and Media are predominately in denial.

****

Lees, Hamish. NSW / Coonabarabran

Aircraft Maintenance Engineer - 50 Years in aviation, apprentice to engineering manager.

The earth is a living thing subject to change.

****

Lewis, Dean. NSW

Engaged in Signwriting, IT, Design, Carpentry, Construction,

Why am I sceptical of the climate scare? Because of my own discerning research, knowledge of basic science and common sense. I smell a rat!

****

Liedmann, Doris. QLD

IT user support and publishing.

I am 65 .. so yes it hot and we have fires but then we have in the past ... so how different is it now. Then there is how much have "we" contributed to the state everything is in. What concerns me more is the ever increasing differing opinions and at times vested and minority interests. I want balanced factual information.

****

Lindsay, David. WA / Bullsbrook

Mining environmental specialist with qualified engineering background, health, safety and environmental in the Pilbara region.

I am sceptical of the climate scare because I firmly believe in evolutionary climate variation and the ever changing earth axis having the effect of moving climate zones.

****

Littler, Peter. Qld / Cairns

Self-employed Farmer, French polisher, furniture restorer.

The reason why I am a sceptic about the climate scare is all the modelling done by scientists employed by the climate body because it is totally out of sync with main stream science. Our carbon foot print is around 1.4 percent here in Australia. There is no way man made carbon has any effect on the climate, Earth needs carbon for us to survive. I could go on but I will refrain at this point.

****

Lodewyk, Michael Hendrik. Qld / Townsville.

Registered surveyor / B.Survey Degree from Queensland University and Fellow of the AusIMM / Fellow of the SSSI. Previously Textile Engineer, Computer Systems Technician. Travel in far east and construction work in NT, employee surveyor with R.C.Todd at Mount Isa. Principal of M.H. Lodewyk Pty Ltd Consulting Surveyor, Mount Isa.

I consider that a little extra CO2 is good for the planet's ecology. Green is good as is a little more warmth. My experience has been in outback Australia and I do not consider the climate has changed in my lifetime. I have had to interpret the location of littoral boundaries and consider global sea levels have experienced little change.

I can not understand the fear.

****

Long, Sandy. Qld / Kewarra Beach

Concerned Citizen

I read snippets of Climate change delusion and the great electricity rip-off with hilarious amusement. Then re-read chapter and verse to arrive at my present disturbed disquiet.

****

Longley, Ian. WA / Perth

BSc(Hons) Geology, Fellow of the Geological Society, Member of PESA, SEAPEX (Life Member), AAPG (All E&P Industry Oil and Gas Societies)

International Career in Oil and Gas Exploration. Worked for Woodside, Shell and Oil Search in various exploration and executive capacities.

I am sceptical because I simply do not see the science and data behind the belief that anthropogenic CO2 is the major control on climate change. As a geologist climate change is a given and its clear CO2 was considerably higher in concentration in the past than it is now and the world did not end. I do not believe this is the end of the world.

****

Lopresti, Vince. Vic / Melbourne

Mechanical Engineer

As an engineer I am trained to look at the facts and validate all evidence available to us. Unfortunately for the green climate agenda, the facts are not

conclusive and far from it. It is time we all stand up for the truth and influence our political parties to frame sound policies around the facts, including building more coal, gas and perhaps nuclear energy sources for our country. It is time we restore our manufacturing sectors again by incentivising industry by providing them cheap and reliable energy.

****

Loudon, Ian.

Business Development Manager

Really good to see a group espousing those 'cynical' views of climate alarmism. I do not have any climate research background, but having lived in Africa and Australia, and growing up during the decadal scare-changes prevalent in the media, I have a truly cynical view of populist theories.

My whole working life has been in the international logistics sphere, and in some ways the requirement of social expectations have influenced our costing processes in a positive way, but just like in the HSE field where increased risk averse attitudes have led to higher costs, the negative effects for transport are the increased surcharges passed on under the guise of saving the planet.

At the grand old age of 60 I embarked on my first truly academic study, a Master in Business Management, and I was shocked at how far climate alarmism has invaded every subject. I have made my feelings known, in an academic way, and will continue to do so until I have finished the degree.

In the meantime, although both wind farms and solar farms are part of our business (I have no problem with either technology as they could serve a purpose in powering remote communities that are off the grid, but I strongly disagree with their subsidisation, or being a major part of our power grid). I noted your concern with the Snowy Hydro, and again I admire the technological aspects, but agree that the concept has no economic value, and was merely a thought bubble that has taken on a life of its own.

****

Loudon, Harry. Qld / Brisbane

BE Hons (Mech) UNSW, BCom JCUNQ, Grad Dip (Finance and Investment) SIA
Worked in industrial, processing, mining operation and has significant experience in major project developments specializing in infrastructure agreements and economic assessment for numerous mining projects (nickel/cobalt, mineral sands, copper/gold, coal, CBM, stainless steel, etc) and native title negotiations.

I am sceptical of the current climate debate because I know "the science" is never "settled" and I have read enough to know there are a multitude of things happening in our world that affect the climate – not the least being water vapour and the things that affect it, like the Sun, underwater volcanoes, cloud cover and the oceans.

It would also be nice if the vast knowledge of geologists was incorporated into "the narrative".

****

Low, Tony. Vic / Langwarrin South

Draftsman then Estimator then a Manager of a Steel Fabrication Company.

I employed up to 50 people at certain time of my tenure, worked at least six days a week and with a bit of Mathematics I calculated that my endeavours had generated some 43 man hour YEARS of Taxable incomes to various governments. I paid the required Redundancies and Holiday pays etc but after all that, I am not eligible for anything from the government. Bill Shorten will want his cut of my nest egg, I know him well.

I have been a Liberal voter ever since Paul Keating's enhanced banana republic announcement. I have assisted the Liberal cause both State and Federal elections , manning how to vote and as both as a booth scrutineer and will possibly help out again IF we will show some Fight.

Why am I a sceptic? I have read the book about the Climate Change Delusion and the Great Electricity Rip Off by Ian Plimer, following me being a long time devotee of Sky News, Credlin, Bolte and Paul Murray Live, If the issues that I have listed above are what I have been influence by, then what else could one be other than a Climate Change/ Global Warming Sceptic.

****

Macfarlane, David

****

Mader, Paul. NSW / Sydney

Associate Diploma of Business Management (Sport). 16 Years with ADF; Navy Clearance Diver 10 years & SAS Trooper 6 years. Property Development Business / Marketing Manager/business owner. Consultant - business Improvement Implementation Director. SECORA Australasia.

I am sceptical of the climate scare - I believe it is all part of the globalists' agenda. The people who make money from this are the bankers and finance institutions - that's what it's about, not the climate. I also believe there is an even more sinister end game - these people do not live in our reality. I don't trust anything coming from government that is not supported by a well-informed critical thinking public. Currently that is not the case, we have been bullied and intimidated to accept global cooling/warming. I now want to help wake people up to the facts.

****

Mapledoram, David. NSW / Sydney

Cert 2 Security Operations; Diploma in Real Estate Sales; 62 years of Life of Hard Knocks
Bank Manager 25 years; Security Officer 8 years.

The instigators of the hoax are all bound to financially gain. Sea levels and ice caps not melting as promoted. Keen follower of politics and radio 2GB.

****

Marshall, Janette Qld / Brisbane

Teaching Diploma - tertiary education at Kelvin QUT. I spent my time teaching primary school but my love of the infants soon had me classified by my heads as an

Infant Teacher handling all of the special needs children in the grades - slow learners and behavioural problem children. I resigned to have my own children whom I believed needed me around - and I wanted to be with them..

I have always been interested in my environment, literature, music, art and science and have deep sympathy for those who suffer the hardships of our climate. Climate changes - every intelligent person must surely know that. Climate has been changing since the earth became a reality. I believe that man should learn to live in sympathy with our environs - we are the highest thinking animal life on earth and so we have a responsibility to get it right. I was extremely interested to hear both sides of the climate debate. I weighed up what I had read, what informed opinion was available, and found the alarmists were relying on flawed science and reasoning. I still think that events and figures are skewed to reach the result wanted - not science.

****

Marshall, R C William (Bill). Vic / East Gippsland

BSc Engineering, Chartered Mechanical Engineer working for the major supplier of CO2 and other industrial gasses for use in various industries including nuclear power stations, foundries, breweries and plant nurseries in the UK and Australia.

Although I strongly disagree with the current policy of shutting down base load power stations (often with totally misleading promotions ref., my recent letter to The Australian) I think the current attitude to nuclear power is what concerns me most. How can it be right to sell uranium worldwide for nuclear power stations but bar it here?

****

Martin, John.

Accountant and Tax Agent FCPA - CFO then Public Accountant.

I am sceptical of the climate scare because it seems to be a left leaning implausible concept which has been implanted in the minds of gullible and naive people within our community.

****

May, Darren. NSW / Sydney

Diploma of Commerce. Pest Control 28 years experience.

There were predictions of global warming in science books when I was at school in the early 80's from the late 70's. They were supposed to become a 3 degrees C rise by the late 80's; they didn't happen.

Then all through the following 30 years, more similar predictions were made, all of which failed.

Now they are teaching science students that global warming will occur in 2100 and not actually be physically noticeable. The new impressionable students may be gullible enough to believe that, but I am certainly not! Now after all the predictions have failed, we are being told that something totally insignificant will happen in 80 years that will destroy the ecosystem.

It's not even slightly believable when you have this past experience and I certainly don't want our country signing agreements that are inhibiting to our business & economy when it is plainly obvious nothing is happening with the climate to justify these burdens being imposed.

****

Macfarlane, David
BSc (Architecture, UNSW), MSc (Sustainable Building Design)
Author: Climate Sense: A Layman's Guide to Climate Change (published 2019 on Amazon.com)

"Amongst other projects, I designed, built, and operated for fourteen years an off-grid, ten-cabin eco lodge on a remote national-park island on the Great Barrier Reef. My most recent project is northern Tasmania's Tamar Solarhome (www.tamarsolarhome.com) which is arguably the world's first genuinely zero-emission, totally off-grid house – a fully-equipped solar/battery-powered home that requires no backup generator, gas, oil, or wood-fire for hot water, cooking, or heating, even throughout a cold Tasmanian winter.

The experience I gained through more than 20 years working with off-grid solar systems made me realise their true limitations; there is no way a large industrial grid can be operated successfully with anything other than a tiny input from solar and wind. This discovery motivated me to find out more about the climate change movement, and the more I found out, the more I realised that it was in fact a massive hoax - a deceitful political movement with no genuine concern for the environment, or humanity.

After two years of research I wrote and published a book (endorsed by two of the world's leading climate scientists: Dr Richard Lindzen and Dr Judith Curry) titled "Climate Sense", which analyses and explains all the issues involved in layman's terms, and as such can be used to educate and enlighten non-technical people who still have an open mind but are finding it hard to believe that the mainstream media and authorities have been promoting a false narrative."

****

McAndrew, Debbie & Glenn.

Homemaker & retired police officer

We are retirees concerned about the future of our country. We have been sceptical of 'climate change ' for many years, we believe that it is just redistribution of wealth from richer countries to poorer countries thanks to Agenda21, NWO, Lima Agreement, the corrupt UN, the lies the left wing MSM comes out with every day, the list goes on! We would like to support a common sense group of people that speak the truth.

****

McBratney, John. Vic / Lancefield

Bachelor of Technology (Electronic Engineering), Adelaide 1965. Marine Radio Operator's Certificate of Proficiency Certified Instructor (Rtd). Experienced deep water sailor and navigator

- Weapons Research Establishment, SA, design and test engineering on defence projects;

- International Telephone and Telegraph (ITT) now Alcatel Alsthom, microwave radio design engineer in Sydney, Antwerp (Belgium) and Pzorzheim (Germany);
- Communications Engineer at Snowy Mts Hydro and at Sth East Qld Electricity Board (Bris);
- Consulting engineering positions in several Brisbane based multinational companies on major engineering project in Australia, France, USA, Indonesia and PNG;
- Private consulting business, long term contract with Qld Dept of Transport on public transport smartcard project – design engineer and construction manager;
- Various contract consulting engineering commissions on major (mostly mining) projects in Australia.

I have had extensive practical engineering experience in major project with electrical/electronic systems and project management. My time with electricity authorities gives me good knowledge of things electrical. I have installed solar arrays on telecoms remote sites and understand the technology very well.

I am sceptical of the climate scare because, as a practical hands-on engineer I am astounded that the hard scientific evidence against the climate change hysteria, that is the proof positive that CO2 is NOT a danger to mankind or the environment, is not accepted by otherwise straight thinking people. I have the perhaps somewhat cynical view that the support by those in power is bought and paid for – big time by big solar, big wind, big hydrogen and big batteries. I find this despicable and wish to assist in reversing the trends – if we can. I also have a solid engineering viewpoint regarding the so called Renewable Energy idea, I am confident that the process cannot function as suggested by the green proponents, there are too many engineering holes in the process (see my list of Hard Questions sent to some of the correspondents on Rafe Champion's list), it will fail, costing an absolute fortune and leave behind a catastrophic legacy of highly toxic pollution.

My most pressing concern is how do we get the message that Renewable Energy is bound to fail across to those mesmerized by the "big " dollars? Before they bury the lot of us in toxic debris!!

****

McCloy, Jeff. NSW

Civil engineer builder property developer.

I am sceptical of the climate scare because it is not backed by proven science, the climate has always changed, it makes no common sense, it makes the promoters feel good about themselves it's the new religion !!

****

McDonald, Colin. NSW / Sutton Forest

MB BS (Hons), DCP. Dr. Path (London FRCPA).

Resident Medical Officer, Registrar at The London Hospital and Royal North Shore hospital, Pathologist - Manly District Hospital, Royal Australian Navy X - List 1

consultant & director of HMAS Penguin Medical laboratory. Private Medical Practice Manly.

I am appalled when I am confronted by the utter ignorance of , so called experts, expressing their views on climate change. As a Medical graduate it reminds me of the fallacies expressed by so called authorities in the causes of cholera ,leprosy ,typhoid and the plague I therefore I express great disdain of those who proclaim the reasons for climate change.

****

McDonald, Mary-Rose. NSW / Sutton Forest
Graduate of RNSH School of Nursing, BA Hons 1980 University of Sydney Fine Arts major MA Hons 1983-4 Historical Archaeology

I am appalled at the state of politics in my country and its unintelligent obsession to global warming and climate change . My family has had a farm breeding cattle in the Southern Highlands for over fifty years and the weather there and in my historical archaeology research has always been cyclical. Al Gore stirred up a hornet nest of opportunity for capitalisation on a theme which has never been proven. When schoolchildren are used this is the final straw.

****

McPhee, Neryl. Qld / Kings Beach
Life skills / Research / Part of Rite-On! Team – engaged in Corporate training /consultancy / finance.

I am sceptical of the climate scare because it is just that – a scare - I am fully aware of the UN Sustainable Development agenda and the push to control the global economy.

****

McGann, Gerry. WA

B. SC (Hons) UWA, Petroleum Geologist. Discovered hundreds of Millions of barrels of new reserves. Formed and MD of two ASX listed companies. President of Rotary Club, Paul Harris Fellow.

When working in the oil business years ago I noticed that reservoir simulations very rarely matched actual reservoir performance, and this on a simple model of two or three phases (oil, gas and water) and the reservoir properties quite well known. Engineers continually had to fudge to get a match to reality. Thus when the first climate models appeared (with many more variables to be accounted for) I looked at them sceptically. Have taken a few courses on how these models are derived and it should keep all us awake at night. Have given many talks to Rotary Clubs and men's sheds on the 12 myths of Climate change and generally well received.

****

McGuire, Mark. Qld / Coolangatta

Professional solo musician of no success for 35+ years

I have written a song about climate change by adapting a poem from Clive James' "Imminent Catastrophe". ***The song is sung monotone, because failed doomsday***

global warming is just plain boring, and a boring subject for a song. The brass section is supposed to sound like someone laughing.

My stage-name derived from a famous quote of the climate-gate emails: Travis T. Jones & the Missing Heat

****

McIneney, Kevin NSW / Kiama
Business Manager - director of my own company.

I am are sceptical of the climate scare because what is happening with climate is simply nature - nothing else!

****

McGann, Gerry. WA
B. SC (Hons) UWA, 45 years as working petroleum Geologist. Discovered hundreds of Millions of barrels of new reserves. Formed and MD of two ASX listed companies. President of Rotary Club, Paul Harris Fellow

****

McKay, Andrew. NSW / Sydney

Studied mathematics, physics, and chemistry at Sydney University. Worked in Financial markets...Reuters, Dow Jones & Co, now a private trader.

The climate scare is based on fraudulently manipulated data in order to serve a political/commercial agenda.

****

McKenna, Frank.

I am passionate about the Climate Change Scam or "Anthropogenic Climate Change". I believe it to be the biggest single fraud ever perpetrated on the western world and the biggest threat to the future of Australia.

****

McLachlan, Alastair. NSW / Dural

B Engineering, Mechanical, B Commerce, MBA. - Design Engineer Automotive Industry, CAD CAM Engineer, Computer Sales to Government, Universities, Hospitals, Home Handyman, Field Sales rep construction industry.

I am not "skeptical" - I believe that the whole "Global Warming / Climate Change" crusade is a complete crock ! Carbon Dioxide is a life giving, life enhancing trace gas. I take one look at an erupting volcano, one brief look at the sun, and instantly know that humans can have no meaningful impact on the world's climate.

CO2 is such a small % of the atmosphere that it cannot be responsible for "warming"

"Global Warming" has become a religion, with many profiting handsomely from their devotion. Observations show the so called "climate models" to be totally misleading. The sun is entering a quiet time, solar flares are approaching minimal activity. We need to focus on serving the coming cool period.

Like most "green" initiatives, such as with the diversion of a low cost food - corn - into a high cost fuel substitute, the unintended (?) consequences are massive, and extremely harmful to the planet and to people.

****

McLaughlin, Warren. Qld

Partially completed BSc (left CSIRO to specialise with IBM at a time when computers were being introduced … 1959)

Work history: 36 years with IBM … initially as a Hardware Specialist covering mainframes … then 12 years in Marketing as a Business Consultant specialising in Strategic Planning

"It is clear that life as we know it could not survive without CO2. Since we know that life can survive with many times more CO2 than is currently the concern, it is also clear that those promoting this have a hidden agenda based on profit. CO2 IS NOT POLLUTION!

"This Saltbush Club is an excellent initiative."

****

McLaughlin, Mike. NSW / Bilambil Heights

I am sceptical of the climate scare because of the composition of the UN, and conflicting scientific research.

****

McLean, Geoffrey. QLD

Front line firefighter for 37 years.

The fires last summer where no worse than many other years. The media whip this up into a frenzy blaming climate change. Climate expert Tim Flannery said the Dams would never fill and the end was near. One year later overflowing and bumper grain crops. Renewable energy is tax payer subsidies going to big corporations. We are being led down a path to destruction of Australia as we know it.

****

McLellan, Marcus. Qld / Morningside

FCA, FTIA, BBus (Acctg) As a Fellow of the Institute of Chartered Accountants, my full professional experience is detailed on my LinkedIn profile.

My reason for joining is summarised simply because – I fully believe climate change is a complete hoax.

****

McIneney, Kevin. NSW / Kiama

Manager - director of my company.

What is happening with climate, is simply nature!

****

McNay, Richard. Vic / Geelong

Own business – transport and motor dealership.

I am sceptical of the climate scare because the world has always changed- the only constant is change. You don't have to look very far to see where the seal level used to be, or have an extremely basic schoolboy level of geology to see how rocks have been pushed up, and the country continually sculpted and modified by time.

I think it's the ultimate human arrogance to believe that we are "changing the climate" and it should somehow stop. I'd be far more enthusiastic to see the slowing or stopping of population growth, or look as a country into viable ways to have a good life without continual economic growth. And so on. Heck, even stopping our shocking use of plastic would be a good thing! And a quick visit to Asia will show you just what we are doing to the world by dumping millions of tonnes of plastic straight into the rivers, and therefore the sea. I reckon we are trying "to stop climate change" whilst missing things that are thousands of times more important. Fiddling while Rome is burning so to speak.

****

McMahon, Steve. Vic / Merrijig
Carpenter / Businessman - 20 years on Mt Buller ski resort, now owner of a small cafe in the resort.

I can honestly say I believed the scare mongers back in the 80s but I do not believe any real changes in weather has occurred in my lifetime.

The science has been bastardised by big business - more real science needs to get into the public domain as most of us believe the UN and extreme leftist have pushed a lie so wrong that our schools have become nothing more than indoctrination centres. I hope I can help get the truth told.

****

Michel, Glen Adrian. NSW

B.ARTS. (Geography, Economics) UNE. NSW. Teacher

I became sceptical when I changed my position about 2006 by eliminating and dismissing various mendacious and fraudulent propositions by advocates – mostly political.

****

Michelmore, John

B. Sc. App. Chemistry. Engaged in corrosion control, management and cattle production.

While mankind can impact the climate, the proportion of our impact is unknown and man cannot control the world climate without the destruction of existing societies.

****

Middleton, Roger. PNG / Madang

2nd generation PNG (4 generations), father opened the Bank of New South Wales at Samari Papua 1910, saw action Gallipoli ,and France where he was badly wounded later returning to PNG shortly after as the Bank did not want him back, eventually in 1920 settled on Kar Kar Island Madang Province PNG where he and my mother are buried. 5 plantations copta and cocoa.

My brother Sir John was a member of the House of Assembly later Shadow Minister of Finance, Sir Michael Somari is a very close friend. I set up and ran a research organization for cocoa on one of our plantations, later joined by Dr David Guest Melbourne University now the University of Sydney and Drs Ken Pegg and Tony Whiley Principal Scientist and research advisor Nambour Research Institute Nambour Queensland, I had developed the world's first tree injector. Ran a volcanic observatory on our island for 18 years. Son Ian set up and runs a huge operation for the people on the Fly River Western Province PNG.

Willing to help if I can?

****

Millar, Peter Anthony. Qld / Maryborough

Licensed Real Estate Agent and Golf / Country Club Manager

****

Miller, John. NSW / Burrawang

I spent my entire working life as a builder (50 years). About 14 years ago I took up trading stocks and foreign exchange trading, it's my hobby now. What I like the most are charts, any charts including maps, that's why I got interested in "climate change".

The so called "experts" are reading a one-minute chart when they should be looking at a monthly chart. The true direction is to be found there.

My fear is for the next generation who are being fed this rubbish by people with a vested interest in power and money. The majority of people in government know the facts but cannot stand up and tell the truth.

****

Miller, Meredith NSW

Licensed construction landscaper

I am are sceptical of the climate scare because I believe that it is simply a money making club. I also believe that the younger generation don't see the damage that will be done by allowing the United nations to run our country. No one is addressing the issue of populations impact on nature I.e. having large numbers of children. Governments of poor countries seem to have money for the people running the country but not the poor. I could go on but not enough space.

****

Mills, Tony. Vic / Maryborough

Motor mechanic. Previous business owner, gold prospector/ gold miner.

I believe the climate scare is an excuse to 'lock up' land. Also, to justify the existence of having groups such as the Greens, activists etc.

****

Mohr-Bell, John A. NSW / Moree

Wheat, Cattle and Cotton Faming

My passion is water, a resource so scarce in the centre of this vast country, but so wasted on its periphery. It is my belief that if we don't develop our Top End, regardless of aboriginal or green conservatism, we have a neighbouring population of a fast growing 250 million, who would not blink twice at moving down to feed themselves, because we are too stupid to do it ourselves. And yes, water is the solution. I believe the Fitzroy River in the Kimberly is second only to the mighty Brazilian Amazon, for the amount of water allowed to flow out into the ocean.

As for the Saltbush priorities for Australia, I believe water fits in all three i.e. 'Climate, Energy, and Infrastructure'.

****

Moore, Brenton. NSW / Sydney

Founder and Managing Director of MAARS, Media And Advertising Recruitment Specialists, considered as Australia's highest profile recruiters in the media industry.

****

Moore, John. Vic / Wangaratta

Farming Course Technical College. Farm manager, Professional Long Range Weather Forecaster.

I am sceptical of carbon dioxide as being the agent of any change in the Earth's climate. From what I learned from my time as both a farmer and a Long Range Weather Forecaster, there are many factors that affect the climate,

particularly the activity of the Sun and associated sunspots. As well, our current farming practices, bad forest management, disgraceful water management and urban sprawl are more responsible for turning Australia into a DESERT.

****

Morrow, Brian John. NSW / Tweed Heads

I would like to add my name as a supporter of your group. I have no particular qualifications. I describe myself as the last of the old fashioned Bank Managers before the conglomerates were formed with what I felt was a total loss of honesty and integrity. I managed Branches in 3 States before resigning when they tried to turn me into a thief.

Best wishes for the success of your group.

****

Morton, Kerry. NSW/ Holbrook

Nursing Diploma - Anaesthetic Technology, Engaged in Healthcare 30yrs and Farming, 30yrs (concurrently).

There is NO empirical evidence that human emissions cause global warming. Sun spots are obviously responsible for droughts and cooling. Family historical records of four generations of farming since 1860's have shown NO dramatic degradation of our land, only $ increases in costs due to regulation and taxes.

****

Munroe, Lincoln. Vic / Pinegrove

Associate Diploma of Applied Science, wool and Fibre Marketing. 25 years, on and off, of working in the wool industry, farmer, irrigator and Shearing Contractor. CFA volunteer.

The Green Agenda, fuelled by the climate change debate, is not only killing industry in this country but also doing massive harm to Australia's unique environment.

****

Murphy, David. Vic / Melbourne

Merchant Seaman / Atlantic Trawler-man / Plasterer / Commercial Builder / Business owner.

At long last an organisation that can take on the Global Warming and now Climate Change nutcases .

I have always believed that the climate changes as it has for millions of years, what I don't believe in is Man-made Climate change. If man has caused any change it would be so small it would be insignificant. I could go on and on.

We need a voice and I am 100% behind you in this. We need to change public opinion and have the debate.

****

Murr, Russell. Qld / Bundaburg

Electrician - I have 38 years experience in the electrical field, commencing in the military (RAN) then heavy industry, contracting, medical and construction [mining (coal & uranium) & LNG] industries.

I am very frustrated from watching people who have no idea how a grid works, very actively working to convert it to the miracle of "renewable" energy supplies that are unreliable and intermittent, one form obviously only working during part of the daylight hours.

Yet when anyone mentions this most obvious fact, you are a blasphemer and shrieked at by the crowd.

Then there is the fact that the rest of mainstream Australia is fed a constant stream of lies from their "friends" in the media that "renewables" are cheap and the way of the future. Naturally a lot of these people don't verify what Koshie, Carl or the Red Bandanna tell them and as it's repeated continuously they accept it as true.

When the head of the AEMO is a raving fan of "renewables" we know we are in trouble.

This has to change before our electricity becomes so expensive and unreliable that we have no heavy industry left let alone the suffering of our elderly who are caught up in this and their plight is being ignored.

****

Murray, Jean. Ireland.

I would love to become a member of the Salt Bush Club.

I have never believed the Global warming scam.

It led me to read Ian Plimer's books.

Thank God there are people in the World fighting to expose the real truth.

****

Murray, John (JP).

I have read a lot on the subject of AGW – I believe it's the biggest hoax of all time. It will end up costing this country billions and for not tangible result apart from some wealth distribution (as planned).

But I am equally concerned with the state of Australian politics so have formed a new political party for ordinary (forgotten) Australians - the True Blue Party Australia. Our policies on climate change? .....it's pretty clear where we stand on that issue....do nothing and do it now!!!

I recently walked 65 klms with a wheelbarrow of coal from Liddell Power station to Branxton to highlight the idiocy of the planned closure of that plant in a couple of years time. That closure will surely kill off any remaining manufacturing in the Hunter Valley – disgraceful!

****

Murray, John. Vic / Melbourne

Associate Diploma Electronics RMIT, First Year Electrical Engineering RMIT then swapped to Electronics. Worked as a Broadcast Engineer – mostly ABC – a Conservative Free Zone except in the Technical support area.

I am not just sceptical of the climate scare but KNOW (to the best of current scientific knowledge rather than believe) that CAGW is a hoax. There is no known scientific basis for CAGW, and most of the statements made by the

Greens and other Warmists are one of the following - outright false, misleading, not relevant or anti-science.

Global Warming policies are killing millions per year - via fuel poverty, increase food staple prices, trillions per year taken out of the useful economy --- you could supply everyone in the world with clean water and medical supplies for life with just one year's worth of Global Warning government subsidises.

****

Murray, Lorna. Qld / Mt Ommaney

MSc, BA (QLD) engaged as Dairy Microbiologist, then Secondary school teacher.

Life member of SGAP Qld, T/A Native Plant Society Qld.

I am sceptical of the climate scare because there has been climate change for millions of years and this will continue. CO2 is essential for plant growth, and therefore for the survival of all life.

****

Will Muskens. Qld / Brisbane

Lived and worked in Papua New Guinea as a Patrol Officer/District Officer/Local Government Clerk. Apart from PNG I owned and operated our family business in newsagencies, and as a TAFE Campus bookseller.

Why you are sceptical of the climate scare - anyone with an enquiring mind will always challenge statements of purported facts.

I became aware of the Saltbush Club at:
www.galileomovement.com.au/media/SaveThePlanet.pdf

****

Nauss, Jay. Qld / Stanthorpe

I think that this whole global warming deal is a scam to give more power to the international elites and is another link in the chain to world government which, unfortunately, many of the building blocks are already in place and growing. There seems to be few organisations fighting the global warming scam.

What they are doing to the Murray river water system is criminal in that it will drive many farmers from the land, and as for the Greens, it seems that they want to see everyone starve and/or back to living in caves.

****

Newnham, Ian S. Vic / Ballarat

Engaged in Agricultural and Construction Equipment Distribution, Top End Tourism, Pet Food Distribution, Real Estate and Finance Brokerage.

I am sceptical of the climate scare because there are far too many opportunistic prophesies that have been proved incorrect. There is a relationship between the exploiting of natural factors to create fear among population and weaken the normal interrelationship between races and religions.

****

Nicholls, Anthony. Qld / Brisbane

Bachelor of Business – Public Accountant

"If only common sense could prevail – simplicity, respect and responsibility will always point you in the right direction"

Oh for the day when we all lived a simpler existence. People respected each other, they took responsibility for themselves, and the criminals were put in jail. Not today!

The economists in the US want to take from the Capitalists and give to the middle class (isn't that what a tax system does?), populists want to let Crims out for Xmas, and everyone hates Adani but doesn't really know why (just gotta hate!).

Global warming – opps sorry scratch that, climate change (in Victoria they can have 4 seasons in one day – who knew?), or is it Snap the Dragon who we should blame?

****

Nichols, Greig. Qld / Gold Coast

Pharmacist.

I am wary of the billions spent to our disadvantage being wasted and the self righteousness and finger pointing and denigration of anyone who doesn't agree with the climate change zealots. There is no debate as with so many issues now.

****

O'Brien, Denise. NSW / Lightning Ridge

Cattle & Wheat Farmer

As a cattle and wheat farmer my livelihood depends on the vagaries of the weather and its cyclical behaviour which has been recorded over many decades. Believing that mankind can lower the temperature by reducing carbon (a building block for life) emissions is ludicrous and arrogant in the extreme. If their belief is sincere, then nuclear power is the obvious solution.

****

O'Brien, Gerard. NSW / Lightning Ridge

Wheat, Cattle & Sheep Farmer

This is a dangerous ideology. We are actually going into a cooling period which has been far more dangerous historically whereas warming periods have been good for society.

****

O'Brien, Jim. Ireland / UK

BE, MEngSc, CEng, FIEI, FIAE, FIET (UK) and LifeSenMemIEEE (USA).

Senior industrial business manager and networking agent.

For his latter 19 years in CRH plc, he was Group Technical Advisor, reporting to the CEO. In this role, he pioneered Best Practice knowledge-sharing across the Group's diverse activities in cement, aggregates, concrete, asphalt and other building products at 3,700 locations in 34 countries, and spearheaded the Group's highly recognised Corporate Social Responsibility program.

One of my final tasks in 2008 was reporting to the Board on the emerging climate debate; having studied the evidence, I concluded that while energy conservation and efficiency made sense, the science was far from being settled.

I have maintained an active interest in the science since then, learning every day over the last 12 years. Seeing how the debate was being politicised and skewed. With a few others I founded the independent and self-financed Irish Climate Science Forum (www.ICSF.ie) in 2016. Since 2017 it has invited lectures by world-class scientists and it has made many submissions to Irish authorities on climate and energy issues. Though the ICSF is still only a small group, it has succeeded in opening up the national debate. It has now joined the CLINTEL initiative, in which Jim is the so-called Irish "ambassador". In October 2019, I made a presentation to the Sydney Climate Realists of Five Dock, which can be seen on https://www.youtube.com/watch?v=lw2417lmqlA&t=89s.

****

Oost, John. NSW

Information Technology

"Natural earth climate cycles are being ignored. If alarmists are so sure why do they use emotional debate that ridicules any so called 'climate change sceptics'. If attempting to reduce carbon footprint, it should be an even playing field based on no subsidies, total emissions including cost over full life cycle of technology, including manufacture."

****

Oraniuk, Gary. Vic / Geelong

Self educated, cook/construction worker. I am a frequent writer to newspapers, weighing into the climate debate and others and giving the local council as much of a kicking as I can. The letters column is a good venue as it gives one a chance(if published) to dispel a lot of nonsensical myths such as climate change propaganda, and to drop a few of what I call "thought bombs" to hopefully make people think a little more clearly about relevant issues.

The climate scare it is the biggest ongoing hoax ever perpetrated on the unsuspecting (and dumbed-down) public.

Basic deductive reasoning, and primary school Nature Study classes, will tell you that CO2 is plant food, and that a bit more of this gas in the atmosphere is only going to feed the plants in our forests. I am appalled that so many people believe this nonsense of climate change/global warming tripe, and even more appalled that the intellectual prostitutes in the universities and science and technology industries, and the media, continue to perpetrate the nonsense.

****

Orr, Doug. NSW / Sydney

Studied at UNSW - MD/Chairman of Amplex Group

I have a son and a daughter – both brainwashed in school with the environmental scare stories. Many youngsters are in the same boat, but I don't think they can be

changed. What we need to do is convince everyone that nothing we do in Australia will make any difference! I think many believe that our government needs to do more to change our climate here, which is rubbish!

Global warming is a hoax started by Margaret Thatcher to fight UK mining unions – subsequently our children brainwashed in school with environmental propaganda.

****

Osborne, Sean. NSW / Shoalhaven

Cert4 business studies – transport and hospitality management.

I am sceptical of the climate scare because of the complete and utter lack of scientific debate. There are infinite variables in climate, how can a computer program account for infinite variables in climate? It can not.

****

Ottaway, Chris. NSW / Sydney

Just a knowledge of High School Biology and Science, something that seems to be sadly lacking in ALL of the alarmist climatards! Work history: Taxis, Couriers and Hire Cars (mostly as a radio operator (dispatcher).

I was like most others when Gore first dropped "An Inconvenient Truth" upon us, but then I realised that CO2 could not possibly account for changes in temperature OR climate. I have read quite widely since then and have come to the firm conclusion that not only is the AGW/CC hypothesis a monumental hoax, but that it is also inextricably linked to the UN's Agenda 21/2030, which is aimed at bringing all nations under a One-World government.

****

Owen, Peter A A. Qld / Brisbane

BE BEcon BA FIET FIEAust CPEng. More than forty years in Queensland electricity supply industry including at chief engineer and divisional manger level.

I have a long commitment to climate change truth and am in total opposition to extreme and scientifically unsustainable views allied to the UN's IPCC and related progressive political approaches.

****

Owen, Merrilyn.

****

Padman, Andrew. WA / Perth

BSc (Geology) Univ Tasmania; BSc (Hons) (Geology & Geophysics) Univ Tasmania - engaged in Petroleum Exploration, interpreting and trying to understand the rock record.

As a scientist, everything is open to question and challenge. The rock record clearly indicates that global climate has varied significantly through geological time. As recently as 12,000 to 18,000 years ago the globe was in an ice-age, with sea-levels at least ~100m lower than they are today, and global warming has been ongoing episodically since then. I am happy to accept that climate change is real!... BUT as to anthropogenic effects caused by CO2? : Totally unproven in my view.

We run the real risk of solving a non-existent problem (AGW), in the process causing poverty & economic hardship, damaging mankind's capacity to ameliorate the adverse effects of future natural climate change.

****

Palmer, Greg.

Retired engineer (UQ 1983 BE Chem, PhD 1994). I had my own consulting company (mainly in Aust but also internationally) working for the process industry, which I recently sold.

I have been reading a number of technical publications over the past few years on climate change and communicated with Pascal Richet who had one of his papers withheld by the Publisher and others, eg How much has the Sun influenced Northern Hemisphere temperature trends? An ongoing debate RAA 2021 Vol. 21 No. 6, 131 (68pp) 2021 Ronan Connolly, Willie Soon, et al - National Astronomical Observatories, CAS and IOP Publishing Ltd and The dynamics of global public research funding on climate change, energy, transport, and industrial decarbonisation by Abbas Abdul Rafiu, Benjamin K. Sovacool, Chux Daniels - Renewable and Sustainable Energy Reviews 162 (2022).

I like to read technical papers and be properly informed on the topic. While I have followed CO2 Coalition and Judith Curry - USA , it would be best to join an Aust based org.

People ask, do you believe in climate change? For me, that's not the right question.

It is not about belief. Belief is like religion or a folk tale. An example - Henny Penny (Chicken Little) is a European fork-tale with a moral in the form of a cumulative tale about a chicken who believes that the world is coming to an end.

Climate Change is about science.

****

Pamboris, Mario.
Registered Tax Agent – Accounting & Taxation

I am sceptical of the climate scare because I know that Mankind cannot change the climatic conditions of the Earth. Mankind can pollute the Planet, cause increases in soil salinity and cut the forests down and bring on a barren land / dessert. But mankind cannot cause climatic changes to the Earth.

The Earth is heated by the Sun. The tilt of the Planet, whilst circling our Sun, directs the Season of Hemisphere and the Moon, influences the tides of the seas. The activity of the Sun, directly impacts the Earth in ways that we are only just beginning to become aware and there are too many things that we do not know.

****

Pankiw, William. Vic / Lalor

Started work age 16, in 1959 worked at two jobs until joining the RAN in 1961 until 1970, on my discharge I started working as a Commonwealth Driver until medically retired.

I am sceptical of the climate scare because I've had enough of being treated like a mushroom.

****

Panther, Douglas. NSW / Lightning Ridge

BA (Monash and Uni of WA), TSTC (high school teaching (Vic), USL Class 4 Skipper (vessels to 80m). Engaged in Journalism then as a Fisheries Consultant (Indonesia) and Entrepreneur for various projects/proposals mostly in South Asia. Managing Director of Opal Hitech Ltd, a public unlisted start-up aimed at 1st ever geophysics approach to opal, based in Lightning Ridge. Also worked with a Beijing Prof. of Aquaculture promoting a large scale aquaculture proposal for Fiji

The notion that the world's fate hinges on four one hundredths of one per cent of a gas that has never been known to force anything more than a champagne cork was imaginative, but absurd; that this could be parlayed into a realistic attempt by the UN to acquire a Sovereign State – and thereby political relevance – is truly frightening. George Orwell, where are you when we need you?

****

Paprocki, Denise and Leslie.

We are sceptical of the climate scare because we believe it is a money making venture and no advantage for Australia to contribute to this scheme.

****

****

Paviell, Terence Joseph. Qld

Motorcycle industry and sport identity

I believe you Saltbush guys have it right!!! I discovered your group from viewing interviews on Paul Murray live. I want to be properly informed and active in my local community to help spread your correct information.

****

Pearce, Robert. Qld / Maroochy River

Bachelor of Business, Diploma of Financial Planning - Banking and Financial Planning.

It is my view that climate changes, as it has done over millions of years. Any impact by humans is minimal, and especially in Australia the overall impact is negligible.

The climate change cult is dangerous and misleading.

****

Pearse, Christopher. Qld / Rockhampton

Fitting and Machining Trade Certificate, Associate Diploma Mechanical Engineering.

Biomedical Engineering Technician.

It was only recently that I started reading up on related topics, human induced climate change, global warming, CO2 and about how wonderful 'renewables' are and how they will one day save us all!

Yes, I initially fell for it.

After a while my gut instincts told me that I was not reading the truth and at that stage it was hard to push through the outer layers of lies and propaganda on the internet to get to the real science that is there, but once through the barrier, a whole other level opened up. I recall first going from the IPCC webpage to the NIPCC webpage, then onto The Heartland Institute, then reading stories about how they were not to be trusted and then finding my way to WUWT (Watts Up With That). I joined a group on Facebook titled Scientists Sceptical of AGW (they allow anyone to join) and I was there, surrounded by genuine science, honesty, truth, integrity and facts.

I am appalled that the mainstream media are so biased on the subject. The fact that there is no discussion at all on MSM about the UN and their plans for a NWO. World- wide Socialism.

Interestingly, I find that information on this topic is readily accessible, far easier to find on the internet. In fact, I think that may be the chink in the armour that should be exploited and could bring the greatest scam of all time crashing down.

The masses will scream and shout and fight like hell against the elite, their plans for world-wide control and domination via socialism once they become truly aware that that is what climate change, Paris and Agenda 21 is really all about.

I am not concerned about my name being associated with climate sceptism, in fact I'm proud of it and glad to become a member alongside so many distinguished Australians.

****

Peart, John (Jack). Qld

B.Agr.Sc, First Class Honours, U of Q. - QDPI, self employed beef production, World Bank, FAO Burma, NTDPIF, last position Director Pastoral, retired, beef producer Central Qld.

I am sceptical of the climate scare because it is ludicrous to believe man's activity can influence climate change. I respect the opinions of fellow scientists too much to believe in the climate extremists.

"I marvelled at the engineering in wind and solar, until I found the environmental hypocrisy they are"

****

Peterson, Dr Rob.

MBBS (Melb 1975), Life Governor Seymour Hospital. A rural GP for 38 years and have followed the climate debate for most of those years.

The scientific model and reappraisal according to newly acquired data has been squashed. We are being led into a new dark age by vested interest groups profiting from the brainwashing of all sectors of society. Open discussion has to be fought for and attained otherwise I see an economic collapse resulting from the redistribution of wealth via energy costs and welfare states which are one step away from totalitarian rule (New World Order).

****

Piercy, Paul. WA / Peppermint Grove

Diploma of Metallurgy. FAICD. FAusIMM. CP. Diploma Business Administration. Senior Executive Programme - Stanford

Broadly based mining background in Uranium, Pb/Zn concentrating and smelting, copper, iron and coal as specific activities. High level of Project Control and management. Executive roles in Mining Equipment sales, services and management. Experience in Australia, Zambia, London Papua New Guinea and China.

From my first contact with modellers I was sceptical because the focus was on the extremes. The basis of the IPCC Reports and the authors thereof have been of concern since it was first produced. I have concluded that the chief alarmists are mainly political opportunists and their projections have been consistently wrong but they have never been seriously challenged by the political class.

My readings always lead me away from the mythologies and highlight the 'herd' mentality of the general population and the politicians. Having lived in the tropics for a number of years I cannot believe the rubbish being spread about the Great Barrier Reef. The water temperatures in the tropics are way higher and yet the coral reefs thrive beyond belief. The Science is not 97% proven, in fact, it has not been challenged by the actual scientific community.

****

Pinn, Graham. Qld / Maroochydore

I want someone to show me some proof that Climate Change is caused by mankind. Please - I cannot see it!

****

Pottie, Dougal. NSW

BSc Rural Science engaged with NSW Agriculture/NSW DPI as Technical Officer crop field experiments, Condobolin & Gunnedah, then NSW DPI Technical Officer, Orange (most recently in a Climate Unit project).

I am sceptical of the climate scare because:

1. Climate has always changed (I think it is generally accepted that pre industrial age there were ice ages and warm periods) so why sacrifice our economy and our people's skills to follow a path that may have little or no effect on the climate.

2. Areas like the Sydney Basin must logically be hotter in summer and colder in winter because of the effect of the increasingly man made environment.

3. If we believe that we are masters of our own destiny then about all one can do is to believe that reducing emissions will bring back the old days of climate (whatever they were - some sort of Utopia?).

Sadly people have forgotten that Our Lord promised that while ever the earth remains seedtime & harvest, summer & winter, cold & heat, day & night will never cease. (See Genesis 8:22). They forget too, that when the disciples asked Jesus to teach them to pray, he said "Pray like this, 'Our Father in heaven....'" Past generations prayed to him and like a father He acted to save. Such thinking is labelled religious fundamentalism nowadays.

****

Powell, Tom. Qld

Retail Management, Licensed Real Estate Agent - engaged in Timber & Hardware business, Manager in a computer software business, Real Estate business.

As my work history may indicate, I am one of the 'quiet', aspirational Australians who accepts that the climate changes and has changed forever.

I do not subscribe to the religion of human caused change and am perplexed at the many shrills screaming their catastrophic mantras. I also despise the people and countries who are profiting from the hysteria and wish that our government would take us out of the Paris millstone and tell the UN to take a hike.

I'm so pleased to see Saltbush taking shape and congratulate you all on your leadership and courage. Please keep up the great work!

I don't trust anything put out from big business, politicians; Al Gore, paid climate stooges, lame-stream media, or corporations with vested interests.

****

Prescott, Beverly. Qld / Atherton

Hospital administration including at our local hospital, which led to my being employed as Medical Superintendent's Secretary at Cairns Base Hospital.

I was an electorate officer for our Local Member of Parliament for some time in the early 2000's.

I have been following the likes of Professors Ian Plimer, Peter Ridd, and Bob Carter for years as well as Viv Forbes, Jo Nova, Bob Halstead (Scientist, teacher and diver regarding the Great Barrier Reef (https://en.wikipedia.org/wiki/Bob_Halstead), and Walter Starck (also GBR - http://www.onlineopinion.com.au/author.asp?id=3923) for years, all with similar views. I am an active opinion writer.

I am most concerned about the way biased reporting of "Climate Change" continues.

The "97%" of scientists who agree is never questioned but accepted by the blind believers.

****

Pringle, Ian. Sydney/NSW
BSc(hons) in 1974 and PhD - University of Otago, NZ

Sydney based exploration geologist with a long career in mineral deposit discovery and mining. My work has leaned heavily on geological processes of mineral and rock formation throughout earth history. Much of my employment during the last decade has focused on the discovery of new deposits of 'energy metals' including cobalt, lithium, copper, nickel and manganese. My current projects (2019) are mostly located in North America (Ontario, Montana, Idaho, Minnesota).

I am sceptical of the climate scare because the climate is changing, always has changed and will continue to do so. These changes are not driven by the amount of carbon dioxide in the atmosphere but a combination of many factors, led by sun activity and cloud cover. In fact I believe that enhanced vegetation growth resulting from increased carbon dioxide content will be a considerable future benefit by improving many natural food chains and boosting most cultivated crops and forests.

****

Prosser, Keith O. NSW / Sydney

Licensed Real Estate and Stock & Station Agent. Bought & Sold livestock in every state and territory in Australia.

Yes I am a very strong climate sceptic .What worries me is that these Climate Change people are teaching this rubbish to our children in schools and hood winking them. But are allowed by all Governments to do it. This has to stop.

****

Quigley, Peter. Vic / Swanhill

45 years truck driver.

****

Rackemann, Paul. – awaiting details

****

Rayner, Ian. NSW / Bowral

Born and raised on the family sheep and cattle property at Dunedoo in central west NSW before schooling at The Scots College in Sydney. Ian is a qualified wool classer and a wool buyer. After yet another Government supported disaster imposed by the Australian Wool Commission saw the industry plunge into devastation, Ian left the industry and has been involved in the real estate industry for the past 25 years.

" I am concerned for Australia's future. Not only have we existing massive debt levels but the persistent squandering of tax payers money on undeserving policies is a joke. Let's keep our wealth in Australia, utilise our own coal assets, lower electricity prices, increase our world competitiveness, increase our job security and create a better future for our children. After all we are meant to be the lucky country."

****

Cliff Reece. NSW

Computer systems analyst / consultant with ICL in Australia / South Africa then with UAL Management Services. He and his family then returned to Sydney where he became, at the age of 29, the NSW State Manager of what was then Australia's second largest management consulting firm, John P. Young & Associates. In 1980 he became Executive Director (NSW/ACT) of the National Safety Council of Australia.

Also lived / worked in Canada/USA for a year before returning to Australia and starting his own business, *Crisis* Risk Management, which provided consulting services to government and business organisations assisting them to plan and

effectively manage physical crises ranging from terrorist attacks to floods, fires, tsunamis and earthquakes – as well as pandemics.

His involvement with the climate change issue has centred on lobbying for recognition of CO2 as having a positive environmental impact rather than being the harbinger of death postulated by many in the scientific profession as well as self-seeking industrialists and left-wing activists whose primary aim is to install failed socialist and Marxist totalitarian regimes in democratic countries. Climate change is merely a vehicle for them to achieve this. Cliff wants to open up people's minds to the issue of CO2 and put a stop to the mindless waste of money and resources and the harm caused to so many people, especially our children.

"In a time of deceit, telling the truth is a revolutionary act!" George Orwell.

****

Reed, Edward. NSW / Sydney

Fitter and Turner (tradesman), Certificate in Mechanical Engineering, Diploma in Engineering (Mechanical Engineering), Degree in Engineering (Mechanical), Graduate Diploma in Adult Education.

I began work as a tradesman working on fine work by manufacturing aeroplane engine components. I then studied mechanical engineering and worked in a range of industries including food processing plant, concrete production equipment, thermodynamic, mechanical and hydraulic systems for commercial detergent production, consultative organisation in grain handling industry, design of load hoisting equipment for use on cranes. Some 16 years before retirement age I qualified as a TAFE teacher in mechanical engineering and worked at 4 different colleges teaching all technical subjects including mechatronics, and rising to head teacher in final years. After retirement I worked architecturally designing buildings and specialised houses (log cabin style), then designing truck tray bodies for specialised vehicles such as electricity servicing vehicles.

Climate has always changed with no detriment to the world. The purported evil of the gas CO2 being pollution is nonsense because that gas is a prerequisite for the production of food and other plant life, and the plants provide oxygen which we need for life, thus if we starve plants of their nourishment then they will starve us of our breath.

****

Reilly, Leigh. Vic / Melbourne

Farmer, vigneron.

I am sceptical of the climate scare because 'Climate Change' has been going on forever & is much bigger than human intervention.

****

Rice, Ron. Tas / Bridport

Assoc dip Ag Business. Agricultural work, Australian Army, Business process operations

I am sceptical of the climate scare because of the negative bias displayed by ABC (surprise) towards anyone with other than green progressive attitude to climate change and their application of near hysterical commentary.

****

Riseley, Randall. Qld / Sarina Beach

Diploma of Mechanical Engineering Mount Lyell School of Mines - Tasmania
Mining consultant, Director International Mining & Engineering Pty Ltd

I am sceptical of the climate scare because Climate Change Terminology is, put simply, a means to an end, whereby big business see it as a huge money spinner and government see it as a method of distraction to be utilised as and when a diversion is required to draw attention away from the government.

I Quote: “SEEK FIRST TO UNDERSTAND BEFORE YOU SEEK TO BE UNDERSTOOD”

****

Rochester, Bob. Qld / Capalaba Qld
Degree Engineering & Construction ,Professional Skipper Master 5 unlimited, engaged in own businesses - Design manager.

We travel oceans and particularly Great Barrier Reef by small boat. Pollution by plastic is an ocean problem but the Great Barrier Reef seems pristine and undergoing regular regeneration. In our youth the scare was "Ban the Bomb". Some important and prominent people are clearly making a lot of money by manipulating the willing lemmings ! Global Warming lemmings have not produced one scrap of evidence to support their outpourings. A scam is a scam, is a scam.

****

Robins, Russ. Vic / Cohuna

Farmer

I am sceptical of the climate scare because scientists are paid to lie for criminals.

****

Robins, Tony. Vic / Thorpedale

Dandenong High School. 51 years self employed as m

Market gardener, dairy farmer (stud breeder), beef farmer, contractor, and now organic market gardener. Having worked for more than 50 years in the climate every day, drawing knowledge from my father, two grandfathers and many other family members and friends (much older than me) I know the climate has not changed at all. Because of

my life work, I fully understand the value of carbon dioxide, an element I cannot do without.

I have been called a climate denier by young educated people to which I laugh. Whenever I see the latest claims from the doomsday people, I'm found wondering how they get away with it.

I am not sceptical of the climate scare because I know it is all a big fraud. The same as other hoaxes, just follow the money trail.

****

Robinson, Vivian. Qld / Noosaville

BSc, PhD, majoring in physics. Engaged with CSIRO, University of New South Wales and with own high technology manufacturing / R&D companies making products and processes world experts said would never work or were of no commercial value. Spent much of the last 5 years finalizing some of my interests in social and physical sciences, including detailed study on climate change.

Geological records are used to show there was no long term relationship between atmospheric carbon dioxide levels and average global temperature. They illustrate that both have been much higher in the past and Earth always recovered, including going into three ice ages over the past 400,000 years. Evaluate of the temperature's most sensitive indicator, the change in global mean sea level shows there have been no reliable measurements of sea levels rising any faster than they did over the past 160 years, even though carbon dioxide levels have increased.

The whole climate change debate has revolved around circumstantial evidence. Even the IPCC's almost 2,000 page reports mainly refer to their models, with very little mention of the science underpinning them.

Climate scientists are hesitant to undertake public debates about the topic. From my discussions with them, that is because they don't have a good grasp of the science involved. They make comments like "the science is settled", but give no reference to what that science is.

You will find climate scientists only too willing to hide behind the complexity of their models. Even if you could get them to debate the topic in public, they would hide behind complex science. If you want to challenge them, it must be done by showing the core of their science is wrong. That is what my website does. I have the necessary physics knowledge to handle the foundations of their models and sift through any complexity they may choose to present.

****

****

Rogers, Christopher Michael.

MB BS FRACS FRACO - Ophthalmologist

My scepticism about the strong link between man and animal made emissions and climate change is twofold . Firstly there are associations but no linear, logarithmic or other links that you would expect in a cause/effect relationship. The expert opinions on why this discrepancy occurs vary - they seem to me to be hypotheses rather than proofs. Secondly, even the explanations of why there is any direct or indirect cause / effect relationship have varied over the years. This can't be a "settled "science . In short there is plenty of reasons for scepticism.

Finally , many of the protagonists both in industry , universities and finance have a strong vested interest in convincing governments to switch energy policy. There are billions of dollars in this.

****

Ross, Roslyn. South Australia

Forty years as a journalist, sub-editor and editor including manuscript editing.

I am sceptical of the climate scare because I believe in real science which does not censor or block dissent. Because I believe in good journalism which works for balance and substantive information. Because I am sceptical of any agenda which seeks to dictate one theory, point of view, or perspective.

****

Rossiter, Janis. Qld / Gold Coast

Human Resources Manager with Telstra, Councillor City of Maribyrnong Melbourne

Whilst world government might be the promoter of climate alarmism, big business certainly makes sure it benefits financially, but whoever is benefitting, it is the people of the world who are suffering and due to ignorance are being taught that climate change is manmade, not a product of the cycles of nature. The peoples of the world should be being taught how to cope with it and work with it – it is not going to stop.

I am concerned about the scare tactics that are being used to convince people that global warming is the result of CO2 and the ridiculous measures that are being promoted to reduce its production; measures that will only result in the destruction of the civilized world and reduce the peoples of the world to poverty and a return to the dark ages.....whilst others benefit - a return to feudalism.

****

Rowley, Darryl. SA

DIP BUS. RE, Sa Dip Theology, Fitter and Turner, Fitter and Turner 16yrs, minister religion 12 yrs, sales 13yrs.

I am sceptical of the climate scare because much of the "truth" appears to be spin which is only half truths and it's backed by the lying Greens who will say anything to get a point across.

****

Licensed Electrical Contractor - Worked on a variety of projects mainly throughout NSW and a little in Qld.

Service and installation work involving general commercial, industrial light and power. Later on specialising in public address and communication systems.

****

Roy, Tony

****

Ruksens, Edward. NSW / Sydney

Commercial Pilot, Hospitality Management

I am sceptical of the climate scare because it is so obviously a scare tactic for the re-distribution of wealth from a left-centric lobbyist and UN appeasing Deep state hopefuls.

****

Ryall, Gavin

Sydney Truck Driver.

I am concerned that our world is changing, but it seems to me that people are more involved in a shouting match than an honest approach to the problem .

I want to see honest information about fracking and if it is poisoning our underground water then it must be stopped, but I want to see an open honest discussion, not a one sided shouting match. Where is our discussion about nuclear energy, again without semantics or emotion.

Common sense has gone out the back door. I don't have all the answers but I would like to hear the truth and like to think that questions are being answered with the truth, not ideology.

****

Ryan, Terry. NSW
Bachelor of Economics (Sydney), Economist: started with Industries Assistance Commission with a stint in New Zealand Treasury. Policy Director NSW Farmers Association. Senior Advisor to Tim Fischer Deputy Prime Minister and then Mark Vaile Minister for Agriculture. General Manager Canberra Electricity Supply Association of Australia (esaa) which then became Energy Supply Association of Australia (ESAA). Principal at Policy and Economic Analysis (my consulting firm and current work). Senior Advisor to John McVeigh Queensland Minister for Agriculture. Senior Advisor to Adam Giles Chief Minister Northern Territory.

Climate scientists do not understand the weather. It is only 30 years ago that ENSO was determined even though the South American Indians knew about it centuries ago. It is only a decade since the Pacific multi decadal oscillation was worked out which is responsible for floods in Brisbane. Brisbane was found to be vulnerable for a 5-year period in every 40 years. The historic evidence strongly supports this.

I can add more on issues such as the impact of the Tongan Volcano on weather patterns.

****

Ryan, Tony. NT / Nhulunbuy

I am an impoverished age pensioner, living in remote East Arnhem Land, but I have done plenty of research on the genesis of global warming (and cooling).

Sandilands, Ron. Qld

Farmer, Rural Valuer, Manager Finance Company and commercial sales with experience gained from a long life of understanding politics and the world-wide influence being accepted by the Government.

Why am I sceptical of the climate scare? Because it is not a scare but a planned hoax to convince all Nations to cow-tow the UN. It is not working for the UN as they planned and they changed Agenda 21 to Agenda 30 to give them time to achieve their goal. All we need to do is be aware of what the UN One World Government is attempting to accomplish.

****

Shewchuk, John, USA, The Villages, Florida

Certified Consulting Meteorologist (CCM), who is board certified by the American Meteorological Society. Lieutenant Colonel in the US Air Force Weather Service after 22 years of global weather operations and a life-long student of meteorology.

I am sceptical of the climate scare because: "There is not climate change crisis – just a climate education crisis." And ... the 97% Consensus is really a 97% Collusion

****

Sergeant, Sue

Registered nurse – St Luke's and Concord hospitals.

I believe climate is mostly cyclical and do not believe the science or modelling being produced by delusional alarmists. Thank you for standing for our values and fighting for democracy. The after dark line-up of Bolt, Credlin, Jones, Murray and Dean try to promote the truth about the global warming scam as do 2GB, but are facing an uphill battle.

****

Sergeant, Peter. NSW

Hawkesbury Diploma of Agriculture

If only we could trust our politicians, to tell the truth, we might all be able to get on with cleaning up our environment instead of wasting time trying to sort out the fact from the political spin. I for one am sick and tired of listening to people with an agenda to stay on the government 'trough'.

****

Schiemer, Elizabeth. NSW / Newcastle

Registered Nurse Advanced Diploma in Art plus qualifications in coaching, hypnotherapy, counselling. Grew up on the land. Lived worked and studied for prolonged periods all over Australia and in PNG, Malaysia and England. Studied Australian history, Asian Art and world religions. Aboriginal and Indian history and mind body medicine to become more aware of the machinations of persuasion, power, religions, beliefs, politics, and the effects on our land.

Bad things happen when good people stay silent. Something is very wrong with the climate change argument.

The advocates want money. They are not calling for a ban on plastics, or air conditioning, cars or flying, or jet skis and pleasure craft or fast convenient food. They do not have a critical look at the big money lender who finances the huge condominiums on beach fronted coast or why forests are denuded for Palm oil.

What damage does the war in the Middle East, with immense fire power and bombs destroying all evidence of civilisation and leading to immense reconstruction projects do to CO2?

Teachers damage children's confidence in security and their future because they follow the prophets of doom, like Gore and Flannery who live in waterfront mansions and jet about the world in big private planes, giving speeches about CO2, the product of our breath, as invisible as God.

No sacrifice of modern developments in Australia, including the children's education, will make one iota of difference to the CO2 in the atmosphere, stop sun spots or the 2000+ under water active volcanoes.

The distance across Australia is the same as from England to Turkey and much is uninhabitable. Australia does not have vast inland water sources, so buying up inland land as a carbon trade seems like a scam.

****

Schmidtke, Dale

****

Schultz, Vincent. NSW / Maclean

Digital Computer Technology AA – engaged in U.S. Air Force followed by Chief Technology Off for Baulderstone-Hornibrook Corp

AGW Climate-Change in my opinion has nothing to do with the Climate or Environmental Issues. It is about Globalism and the change from Nationalism and Capitalism to that of Cultural Marxism and Global Government.

****

Seears, Russell Qld / Witta

Diploma of Agriculture. Rural work history from station hand to station manager, experienced in cattle and farming. Specializing in Artificial Breeding on cattle.

My knowledge might be limited, but I have seen and felt a lot and I know there is 'climate change'. What I don't believe is that its 'mans' fault. Looking at the history of the world, this is not new, it's just weather cycles, but sadly we live in a time when we have to blame someone for everything.

I would like to be a part of the Saltbush club and to learn about my surroundings.

****

Sellens, Ross. Qld / Sunshine Coast

45 years as a medical practitioner in general practice with the last 15 years in Skin Cancer Practice.

Changes in climate are due to nature – nothing else.

****

Sethi, Vivek

Engineer(Industrial) who is extremely concerned with UN Aganda 21(2030) and the Globalist direction that Australia is headed in.

The Climate Fraud is simply a tool for making that happen at the expense of Australia's sovereignty. If nothing else, the French have shown us what Macron's Globalism and open borders have done to a great nation.

****

Sewell, Robert Qld / Barcaldine

Cert. Nursing. Chainman/process worker/ Nursing Officer RAANC/Registered Nurse 30yrs - Remote Area Nurse Specialist '94 – 2014

I am sceptical of the climate scare because to me, all their claims are obvious nonsense!

Firstly, in the Pre-Cambrian, CO2 was about 7,000 ppm. The Earth should have turned into another Venus if CO2 was the problem.

Secondly, the current levels at 400ppm are CO2 poor for plant life. I drove across the Nullabor many times when it was less than 350ppm, and now it is noticeably greener at 400ppm.

Thirdly, look where the Climate Change money is going to. It's ending up in the pockets of the spivs, main chancers, and the dodgy brothers.

Fourthly, the whole scenario has the same hysterical overtones of the South Sea Bubble, the Dutch Tulip Craze and Global Cooling had. Does anyone remember the Polywater freakout? How water was becoming polymerised and we would all die of thirst among oceans of water? It turned out to be dirty lab-ware.

Fifthly, it's being pushed by the UN. If that doesn't ring any alarm bells, then nothing will.

****

Shaan, Rowan. Qld / Warwick

I am delighted to hear about the Saltbush Club. I would love to become a member. I am a grandmother with no scientific qualifications but I could make a small donation and applaud from the sidelines. And I can talk to people.

****

Shanahan, John. Denver, Colorado, USA

Civil Engineer - B.Sc., M.Sc. (USA), Dr. Ing. (Germany)

Worked in research, design and licensing for nuclear power in the USA and Switzerland from 1970 through 1988, then for environmental cleanup at U.S. Dept. of Energy weapons facilities from 1990 through 1995.

Worked at pro-bono public education for sound energy from fossil fuels, hydro and nuclear from 1990 - 2019 on three websites: gonuclear.org (closed), efn-usa.org (currently open), viewsonenergy.com (scheduled to open April 2019)

I have studied the topic of man-made global warming, man-made sea level rise, man-made ozone hole formation from 1990 through 2019 and posted over 400 articles and PowerPoint Presentations on these subjects on efn-usa.org. These articles are by many authors on all sides of these topics and I have communicated with many of them directly to discuss the issues at hand.

My biggest concern is that extreme environmentalists - really people who want to rule the world, will take over the world's energy planning and ruin modern economies. I have lived to see so much extreme socialism, communism and totalitarianism having lived a total of 11 years in Europe in the 1960s and 1980s.

****

Sheen, Jacob.

Civil engineering, boilermaker/welder, truck driver, business owner.

When I was a kid it was the hole in the ozone layer and nothing's happened with it either. Plus if a volcanic eruption cannot destroy the earth how will we.

****

Shippen, Gilian. SA / Adelaide

Cert IV Animal Care (Veterinary Nursing) - 28 years in Veterinary Industry with the last 25 of those years with the same boss

My favourite High School subject in the mid to late 80's was Geology. I distinctly remember the lesson on photosynthesis, and weather patterns throughout the ages - it just does not relate to the climate scare mongering of today, in fact the arguments of today almost seem to contradict themselves with their own explanations.

****

Shupe, Douglas. NSW / Allambie Heights

BSc University Wyoming USA, Personnel Management TAFE, Sydney NSW

I have attended a number of AEF Conferences and was most appreciative of being able to speak with Prof Carter, and others.

Climate is changing, however, the human input is much lower than natural inputs to CO2 levels, the computer models are failing, Australia's input is infinitesimal, it is financial suicide to tax CO2 gas or to turn it into a commodity to be traded. The UN involvement since day 1 is a huge indicator that this AGW is largely a scam.

What was done to Prof Ridd is criminal.

****

Sigley, Vivi.

****

Sivyer, David. WA / Wandering

Cadet Chemist / Chemist

Fly ash recovery & utilisation, fire extinguishing and associated trials, horticultural lab trials Medina Research Station; concrete chemical admixture production.

Small landholder / farmer vigneron and wine maker Southern Stars Vineyard and winery.

My interest in climate science began when I asked my boss Reg Nelson, what his opinion was on the topic of global warming. Reg's reply was simply " the science isn't right, yet". It didn't take long to realise that the propositions put by the IPCC were indeed rickety!

The issue of ocean acidification, in particular, captured my attention. The fact that the oceans are a buffered solution, in a basalt basin lined with calcareous ooze is ignored by the AGW priests. I had an interesting conversation with Patrick Moore, in Mt. Lawley, a few years back. The conversation included comments from a young astrophysicist from UWA. He was less than impressed that his PhD supervisor insisted that he toe the "party " line on climate change.

While I deplore the mercenary nature of many "academics" I am also guilty of receiving a grant from the then Sustainable Energy Development Office, in WA. I applied for and received a grant to investigate the use of "low temperature cured geo-polymers" in rammed earth construction.

I am angry at the shenanigans surrounding RET and the perfidy of the politicians who have succumbed to the climate change lie.

****

Skillitzi, Stephen. SA / Adelaide

University lecturer in Thermal Technologies, 'Soft' Geology [clays/ sediments etc].

2010 Federal Lower House candidate for the seat of Boothby, S.A. supporting THE CLIMATE SKEPTICS PARTY.

"My familiarity with heat transference physics etc contradicts the AGW scare re CO2."

And without discounting purely naturalistic causes, I cast a respectful eye on Old Testament Scripture.

****

Slee, Patrick. Qld / Gold Coast

Rose to Senior Management level in the brick industry for many years then branched out in my own business to manufacture & market lightweight brick façade products. We are now market leaders in the field and award winning exporters.

I am sceptical of the climate scare simply because I have taken the time over the years to read and absorb both sides of the debate and find the overwhelming common-sense conclusion is that the IPCC predictions have all been wrong and there is, what I believe to be, irrefutable evidence that the reports supporting Climate Change / Global warming / Mini Ice Age / Death by C02 are corrupted by modified inputs to reach a contrived conclusion. The rhetoric is about Climate Change – the purpose is about controlling monies.

I am thankful that there is an alternate voice starting to emerge fighting this dangerous 'religion' and as a card carrying, argumentative climate sceptic, I am happy to join and do all I can to help.

****

Smith, David. NSW / Ladysmith

Senior manager for Transgrid's high voltage transmission system in NSW and Asset manager for the Southern part of NSW. He was also heavily involved in the transfer of Snowy transmission assets to Transgrid.

"My wife and I also established a fine wool merino stud. I think I have insights into how this climate change scare is impacting from the viewpoint of someone with a scientific and engineering background. I also have a perspective from a farming impact."

"There is no science, it is more like a cult"

****

Smith, Jeff.

A breath of fresh air and common sense.

I would love to add my small bit of momentum to this group.

Forrester, Tour Guide, Plant Operator, currently running my own business, Rangeland NRM Consultants (rangelandnrm.com.au).

The climate scare is fabricated by the UN to push agenda 21. Even the founder of green peace has debunked the whole thing.

****

Spence, Douglas Paul. Qld / Brisbane

I am a retired Senior Lawyer having been a Council Member of the Queensland Law Society and President of The Solicitors Board of Queensland. I hold an LLM (Coursework) from University of Queensland.

I began studying the issue of Climate Change over a decade ago after a debate with my brother in law. I was inclined to be sceptical of alarmist claims of a climate crisis.

In 2009, I attended a lecture on Climate Change at the Queensland Club by Peter Ellis a Geologist which gave the perspective of change over aeons in Earth's geological ages. It was highly sceptical of claims that greenhouse gases are the predominant drivers of climate. I have since read scores of papers and books on the subject from both sides of the debate.

I note that both Freeman Dyson and Edward Teller plus multiple Nobel Prize winners in Physics reject the " settled science". Again last year I heard an address from John Pett a Senior Geologist from the UK rejecting alarmism completely. I remain firmly of the view that the effect of CO2 in the climate is grossly exaggerated.

Further the economic policies we are asked to follow are clearly damaging and dangerous to all economies.

****

Spork, Grant Mitchell. Qld / Sunshine Coastand

B. Design Studies. B. Architecture (Hons) - Architect, Builder, Project Manager, Conservationist

- ***I do not believe methane from farm animals can affect the climate.***
- ***Exotic weeds and vegetation growth is largely responsible for the terrible fires in Australia in 2019-2020.***
- ***Glyphosphate kills coral and magnifies the effects of a warm period and we should ban it, as they have in Europe and the USA.***
- ***Carbon does not drive climate though more carbon is released in a warmer period, it is not a pre-curser - it follows a warming event.***
- ***We cannot model how much carbon is released from tectonic and volcanic activity in the oceans under water, so how can we model atmospheric carbon, man-made carbon's effect as a driver of carbon.***
- ***Cities are concrete and bitumen heat sinks, naturally temperatures measured in cities will show warming at ground level.***
- ***We should not upend our energy policies to reduce carbon unless India and China, South America do the same.***

The UN use climate action as a way to implement socialist and communist ideology and make us pay into their funds, whilst preventing us from building dams. This is an existential threat to the nation and we should get out of the UN entirely. They do not talk about over population or what that does to the environment, surely the greatest threat to humanity is overpopulation, especially in Africa and China.

I believe radical Green's policies deflect from true science and action on desertification and fuel reduction and they need to be countered!

****

Spotswood, Roderick H.

I'm ex everything, Viet Vet RAN, Publican, Hotel Broker and Electrical Fitter RAN, ***but still a strong Conservative and anti Paris, Agenda 21 / 30 and the NWO***.

****

Spowart, Mike. Qld

Engaged in the truck manufacturing and marketing industry.

I am sceptical of the global warming scare because it is all driven by vested interests of media, universities and business subsidised by government funding.

****

Squires, Louisa. NSW / Peak Hill

BNurs(CSU), MNurs (Health Services) (USyd), Grad Cert (Psychology of Risk)(ACU) Registered Nurse, Registered Woolclasser. I have run a sheep and wool producing property with my husband in Central West NSW for 22 years. We have planted 95,000 saltbush plants to date and plan on more. The best plant on earth!

I am sceptical of the climate scare because ilt is arrogant in the extreme to believe that we can not only pollute this earth (we have) but that we can, as a race, impact the effects of the sun, the moon and the galaxy.

****

Squillit, Jay. Qld / Stanthorpe

I think that this whole global warming deal is a scam to give more power to the international elites and is another link in the chain to world government for which, unfortunately, many of the building blocks are already in place and growing. There seems to be few organisations fighting the global warming scam.

What they are doing to the Murray river water system is criminal in that it will drive many farmers from the land.

As for the Greens it seems that they want to see everyone starve and/or back to living in caves.

****

Stark, Richard. NSW / St Ives

BA (ANU) (MA Sydney) History teacher.

As a historian (With a major in Geography) I became aware of the cyclic nature of the world's climate and particularly the effect it had on civilization. Further reading convinced me that carbon dioxide (*carbon pollution indeed*!) could not possibly have much effect on the world's climate.

****

Steffens, Pat. Qld / Brisbane

What you are doing sounds great and I will support it.

****

Stevens, Geoffrey. Vic / Ocean Grove

Accounting CPA

Worked as an accountant in industry. MD of small hardware/timber/furniture retail business. Returned to accounting. Opened, owned and operated my own supermarket.

I have spent many hours delving into global warming/climate change publications/articles etc., and discussing with many interested parties, without finding any facts that prove the "climate science alarmists" argument that the science is settled.

They say the science "is settled" and that 97% of scientists agree. So far, I have not seen any evidence of what the "settled science" is. I have not seen any evidence of where an "alarmist" is prepared to debate the science publicly. I am concerned that my four grandchildren are being brainwashed at school without any opposing argument or facts being presented. On Christmas Day, two of my grandchildren, aged 12 and 14, were told by their aunt that they must support climate change and should have joined the school childrens' demonstration day and they were told "we have to get rid of the Libs".

This type of brainwashing is unconscionable. The public school education system must be made to be unbiased and finally, the Paris accord must be rejected by the Australian Government.

****

Stevula, Peter. Qld / Brisbane

Cert 4 Civil Supervisor in the Construction Industry.

I have worked outdoors for over 35 years and the climate has been the same over that period. The Global Warming scam is about transferring wealth from Western Countries to the UN pockets.

****

Stewart, Colin. NSW

Financial Services Business Consultant at Reserve Bank, ClearView, Metlife, MLC.

It is obvious from history (e.g. Greenland Ice Core samples over past 12,000 years) that temperatures have been vastly fluctuating by many more multiples than recent history. This has nothing to do with climate and all about global economics and wealth redistribution.

****

Stewart, Ian. Qld / Cairns

****

Stidder, Anthony Ian. NZ / Christchurch

CEng,HRA , REA, NZIPE,ASHRAE

Designed wing tank jigs for the DC10 at Me Donald Douglas, Commissioned world largest district heating system at King Abdul Aziz Military complex, Tabuk Saudi Arabia, Commissioned Bustan Palace Hotel Muscat while working as the senior a/c engineer of place properties Oman, Started from scratch and owned largest Plastic recycling company in New Zealand for 11 years.

I am sceptical of the climate scare because I have never actually experienced any of the issues put forward during my time working overseas. In fact in many places the opposite was happening.

****

Stirling, Larna. Qld

Justice of the Peace, mother of five children, grandmother and great grandmother who is desperately worried about the state of our Nation. My reasoning for joining The Saltbush Club is the same reason I joined Australian Conservatives.

We have to fight back on this climate change hoax which I have thought was untrue three decades ago when they started this well thought out way to control the population with the greatest hoax ever perpetrated. Scientists blatantly lie and fudge results to keep their funding and the honest Scientists who say it's a hoax are hardly heard by the public.

I am not a proponent of globalisation and think we should exit the corrupt UN, I could say plenty more but will finish with. "Get out of the Paris Accord".

****

Stoke, Nigel. NSW / Sydney NSW

MA Cantab. Worked in Multi Nationals and SME buying, running and selling businesses. Investor and principal of Family Office

Science requires validation and rigorous debate on assumptions and opinions. The consequences of the current misinformation or promotion of other agendas is deeply disturbing and ignorant in respect to the consequences for many on the planet who have yet to rise up out of poverty.

****

Streatfield, Jarret. WA

Mining Operator.

I don't believe that mankind's 4% contribution to the remaining 96% of naturally produced atmospheric carbon dioxide is solely driving climate change. Greenhouse gas theory and it's associated predictions are yet to be correct. In professional greenhouses, growers pump C02 into the mini atmosphere at a rate of 1500 ppm and plants thrive! We are currently sitting at only 400 ppm and plans die at around 200-300 ppm.

****

Stuart, Louise.

****

Stuart, Rodney R. Tas / Dilston

B SC (Engineering, Mechanical) (University of Manitoba); MBA (Massey) P.Eng, CPEng, IPEng PMP

General Electric, Technical Director (gas turbines), Westcoast Energy Inc., TransAlta, Natural Gas Corporation, AGL, Alinta, Aurora Energy, Hydro Tasmania.

"I am frustrated that the general sceptical viewpoint seems to admit that the propaganda from the alarmists is to some extent true, but greatly exaggerated. In fact it is complete nonsense, and it should be called out as such."

****

Stubbs, Phillip. QLD

Volunteer fire-fighter, fire investigator, dangerous goods response qualified. Certified construction worker. Business owner.

I am concerned that the climate change proponents claim that climate change is the cause for recent wildfire. Poor management of fuel loads and hazard reduction and the interference of "greens" is a major contributing cause!

****

Sullivan, Jack SA / Goolwa.

Diploma in Industrial Design (Product), Refrigeration Technician, 30+yrs Design Consultant in manufacturing, Television. Administration in mining industry.

I cannot understand how intelligent scientists & politicians can't see that the Sun has an enormous effect on Earths weather or why UN is demanding $'s for some Socialist Global ideology.

****

Suratman, Merril. Vic / Shepparton, Victoria

Self employed small business owner – qualifications: Common Sense, Nous, Ability to listen, learn and digest. critical thinker.

I am sceptical because of all the unproven nonsense driven by a large band of money and power. 'Science' in many forms has lost credibility, real evidence is confused with Models and Grants and brainwashing of the uninformed is the pastime of the media and fools.

****

Sutcliffe, Darelle. NSW

I am sceptical of the climate scare because I know it's a ploy from the UN to take over the world. My qualifications are just living 63 years remembering the weather when I was young till now. I hate these people grooming young minds to their own agendas.

****

Suttie, Gerard. Vic / Melbourne

Engineering Business Owner

My business has been directly affected by misguided carbon reduction policies. Extensive research into the subject of Anthropogenic carbon induced warming revealed what rubbish it actually is. What is totally unbelievable to me is the amount of people who believe mankind can actually change climate. Unfortunately as always once governments become involved it`s guaranteed to go sideways!

****

Suvoltos, Alex. Vic / Melbourne

B. Com. (Hons.) Melbourne University (Ormond College). Gollin & Company - 1967 - 1969 Melbourne. 1969 - 1976 Japan (but also covering South Korea Taiwan and Hong Kong) Mainly involved in Gollin's steel and coal business.

1976 - 2004 own company based in Seoul Korea.. Main business - representing Australian coal companies. Also involved in steel uranium and LNG business.

Basically I'm on the same page on all the contentious issues as articulated by your distinguished list of members.

The fundamental reason for my scepticism is that I don't accept the argument that "the science is settled" as to how/to what extent mankind's existence and activities cause changes in the climate.

My main concern is that " the message" is not being disseminated into voter land.

Civilisation on this planet today and into the foreseeable future is based/dependent on the continuous uninterrupted supply of electricity. Based on the present level of technology there are a finite number of ways electricity can be produced. So the first consideration has to be reliable supply.

The secondary consideration is cost. A distant third has to be the disposal of "by products" - depending on how the electricity is generated, eg: emission of noxious gases and disposal of spent fuel rods, ash, tar etc.

One factor that is somehow always overlooked or rarely mentioned is the role human ingenuity will undoubtedly play in solving any problems arising from the planet warming (or cooling) - if and when that happens and regardless of who or what causes it.

But in the meantime to spend trillions attempting to save the planet from something that may or may not happen, that may or may not be caused by "us" is ridiculous - to put it mildly.

****

Sweet, Tim. QLD / Brisbane

B.Eng. Chem.(First Class Honours), University of Queensland, Registered Professional Engineer of Queensland RPEQ, Fellow Institute of Chemical Engineers FIChemE, Engineering Council Chartered Engineer CEng

For 30+ years I have been involved in the design, operation and process engineering support of upstream oil and gas production, coal seam methane production and downstream crude refining and LNG facilities.

Probably not sceptical, more just don't care. I don't want to see Australia sacrifice it's economic prosperity and energy advantage on climate targets that won't make a difference globally.

****

Swift, Mike. Qld

Engineer / Manager. Finished school, did Marine Engineering alongside a fitting and machining, trades course and went to sea as a junior engineer. Then worked in a few industries and service companies from Garden Island Naval Dockyard where I served my apprenticeship to the Apprenticeship Training Officer at Cockatoo Island Shipyards and engineering facility for a couple of years and moved to Maintenance supervisor / Engineer for BHP Shipping in Port Kembla maintaining their bulk carriers up to 170,000 DWT.

While the world worries about climate change, Australia bashing is a top sport because the rules of the game allow our climate change input per "head of populations" to be used to abuse our performance while our total emissions are trivial compared with other countries.

For the past couple of hundred years our population has been quite happy, well fed, had effective legal conditions with quick results and also some pretty good tucker! The political situation now has just about come to a road block since we introduced the greens into a country of heat and flooding rains and started to shut down our industries..

****

Symons, Roger. Vic / Melbourne

B.E. (Mech.) - U. of Qld. 40 years in Building Services (large commercial and industrial Air Conditioning)

The words of Phillip Stott (Uni. of London) in 2017 speak to me: "The fundamental point has always been this. Climate change is governed by hundreds of factors, or variables, and the very idea that we can manage climate change predictably by understanding and manipulating at the margins

one politically selected factor (CO2) is as misguided as it gets." "It's scientific nonsense."

****

Taggart, Tony. Vic / Sandringham

Chartered Accountant and holder of a Commercial Pilot Licence. Own accounting practice since 1978

The Earth's climate has been changing since the "Big Bang". There is no reason to suspect that change will not continue – naturally.

The so called man made Climate Change has at its genesis a group of people – led my Al Gore - who have and are making substantial and lucrative livings out of declaring that there is "settled science" that man is creating Climate change!

There is no such thing as "settled science" in any sphere from – Galileo, who established that the settled science that had the Earth as the centre of the universe was not true, and the advances in medical science which has seen a revolution in the fact that previous "settled Science" was not true.

I believe in the adage "Tell me the truth so that I can be prepared". I do not like being told that CO2 is a pollutant gas that must be eradicated by a bunch of people like Al Gore, David Suzuki, Tim Flannery and lately David Attenborough, who then get in their fossil fuel modes of transport and turn on every conceivable energy device powered by such fuel and or nuclear fuel and expect me to walk, ride a bike or row a boat to wherever I need to go to save the planet from a Gas which is a fundamental building block of life on Earth.

These same people, at no time, ever single out the rapacious growth in an unsustainable world population as being in any way part of any problem that is being experienced by the Earth. At no time do any of these people single out REAL pollution as being a major issue that impacts plants and animals (including humans). Australia and the world needs people who promulgate FACTS not FICTION.

****

Tait, Warwick. Qld / Bribie Island

Professional Artist – self employed

Climate Alarmists are continually being caught telling lies and demanding not to be questioned as the science is closed. Science is never closed. I'm afraid of what is going on. I do not support the UN Energy plans and fear there is a hidden agenda. Why are we being kept in the dark?

****

Taylor, Scott. NSW

Worked in various jobs, never unemployed now own a substantial amount of rural land in NSW.

I am sceptical of the climate scare because it reminds me of the y2k bug. Australia is too small to make any difference but will put itself into recession if it signs up to Paris agreement.

****

Taylor, Roger John. WA / Secret Harbour

Engaged in waste management.

When the Climate Scare first cropped up as "global warming", I thought: hah! the next Y2K and I was right. It always was a complete load of bull and I thought that everybody with a half a brain should be able to see this. Then when it was changed to "climate change" it was glaringly obvious.

****

Tetley, George. QLD

Advertising, research and marketing in industry and media

I am sceptical of the climate scare because it has become a religion which doesn't make common sense. Modelling isn't science. Only dead fish always go with the flow

****

Thiago Maia - CLINTEL Ambassador in Brazil
PhD in Nuclear Physics and Astrophysics.
CLINTEL Ambassador in Brazil, PhD in Nuclear Physics and Astrophysics.

I look forward to a contact, because I can contribute with information and explanations of extreme events around the world and also information about the Brazilian Amazon.

****

Tholen, Chris Huygens. Qld / Brisbane

Computer Tech, Assoc Dip Business(Computing) - 1992

The masses have been sucked in by some very crooked Chicken Little's .

****

Thomas, Mike. Qld, Brisbane

My education level is not that high but did spend the last of it at Church of England grammar school in Brisbane. Working with and understanding nature as a jackeroo, ringer, plantation manager.

****

Thomas, Rustyn Wesley. Qld / Ningi

Aircraft Ground Engineer, RAAF / Civil

I cannot decide what is more arrogant: To say that humans can change the temperature of Planet Earth using just 0.04% of its atmosphere, or that if the climate temperature changed, we could do anything about it!!

****

Thomas, Kevin. WA / Popanyinning

Retired farmer and voluntary worker in hospitals in India.

Just read your latest post, Federation Failures - Leaping Backwards – all rings true to us.

****

Thomas, Patricia. WA / Popanyinning

Retired farmer and voluntary worker in hospitals in India.

Just read your latest post, Federation Failures - Leaping Backwards – all rings true to us.

****

Thomson, Robert. NSW / Sydney

BSc BE, MBA, MA - Chemical Engineer and lately corporate finance practitioner.

I am suspicious of the way a small number of people have hijacked the climate discussion. Accordingly, I encourage wide discussion presentation of sensible alternate views.

****

Thompson, Ian. Qld / Brisbane

Architect 30 yrs; founder director Thomson Adsett Architects

I am sceptical of the climate scare it does not add up! After 5 yrs having adopted that position of 'crisis', I now reject it.

****

Thorp, Gregory. NSW / Sydney

Banking/ Accountancy/Secretarial/Finance. Career Banker.

I have lived through socialism, fascism, communism, Islamism and environmentalism to name but a few movements which fanatics employ for the “good” of their fellows.

Now we see “climate change” being preached with fervour by so called academics who use their educational positions to brainwash their young students while brooking no argument to their beliefs. ”Global Warming” now hastily renamed “Climate Change” smells to me like “Marxism” dressed in the clothes of “One World Government” to make it slightly less odious.

****

Tidey, Jennifer. NSW / Country

I have no scientific or university qualifications, but am a thinking person who is extremely interested, dismayed, gobsmacked by the current climate scare and have read, listened, argued and watched many scientific talks, interviews, graphs, charts, debates etc. and am a regular reader and poster of the Jo Nova site.

My work history has largely been in the private sector, from newspaper advertising and tourism, to radio announcing and advertising, teaching communication.

I am extremely sceptical of the climate scare as it has spawned a trillion dollar industry and the UN is clearly seeking to create a one world government.

The Australian media, especially the ABC and Fairfax, the latter writing to advise that they will not publish the views of people who claim climate change is not occurring, will not give both sides of the argument and so the average time-poor worker has no chance to be able to give the climate scare considered thought.

There is ample evidence that the climate is changing just as it always has (ice ages, inter-glacial warm periods etc.) and that the CO2 increases or decreases are the RESULT of changes in temperature. Australia continues to sell its coal to its competitors all the while reducing its own ability to have a reliable power supply. Dumb!!

****

Tinsley, James. Vic

Share Broker, Hospitality International

I am sceptical of the climate scare because it's not true, plants (and crops) in Australia grow better/stronger and need less water - the carbon dioxide is what make the plants grow?

I have been a family member of the IPA Melbourne since 1978, ***we need to secure the sovereignty of Australia, not the UN AND Brussels***!

****

Tozer, Warwick. Vic / Melbourne

I am an accidental inventor who invented and patented a sweeping system that has revolutionised airfield tarmac sweeping, auto/road and race track sweeping and sports field sweeping. I run a family business manufacturing in Australia and exporting globally.

I believe the climate changes and will continue to do so regardless of delusional human intervention. Intervention at massive cost causing serious erosion of living standards as well as, even more importantly, harming the lives and wellbeing of the most vulnerable. I believe in open and honest discussion to arrive at the truth.

****

Trengove, Darren. NSW

Masters Occupational & Environmental Safety and Health - WHS, Environmental, Training, Compliance management in Health, Local Govt, Rail Infrastructure.

There is no room for opposing views, the media/politicians/woke celebrities are working in lock step to promote "the crisis" and cancelling opposing views.

****

Trigge, John. SA

20 years electronics technician and officer in Royal Australian Navy, 17 years in computer industry as technician, state and national service manager and company Managing Director. Currently retired but still teaching computer technology.

There are too many historical contradictions to the current spate of supposedly AGW-caused weather events and too many scientists pointing out the deficiencies in climate research.

****

Troy, Brian (Andy). Vic / Frankston South

I have for some time been concerned with the increase in false and misleading information that is being spread about Climate Change. Something that has occurred, is occurring and will continue to occur.

I am particularly concerned about how information is being misused to create fear amongst so many people who are not prepared to listen to alternative views and opinions but prefer to force their views on amongst others, young children.

I welcome the opportunity to join those who look at this subject with common sense.

****

Trousdell, Tony. Qld / Gympie

Diploma in Applied science rural . Farmer & Grazier / Animal Control Officer.

I take a big picture interest in everything around me and over the last few years, have noticed certain people in society are pushing for change, change in every aspect of life. My motto is if it isn't broke leave it alone ...This push for change now has a name, well a few, eg: Woke, progressive, political correctness, virtue signalling cancel culture....and thrown in with this we have media and social media as well as some academics knowingly pushing out fake news for their personal agenda. I would be very happy to join a group of like minded people to stop this "rot"

****

Tucker, Phil.

Engaged in financial services.

I am sceptical because I emailed the CSIRO some time ago and asked them that if human contribution to the 0.04% of CO2 in the atmosphere was only 3% , what was the problem and were the figures correct. They refused to answer the question.

I had sold my 4wd and did all sorts of emissions saving things, and then I heard that the “debate was over” and started researching the subject. I found out quickly that CO2 was a trace gas, a tiny fraction of a percent of global atmosphere, I found out about the “Non Governmental .....”, in Canada, phoned them and spoke to someone, discussed a few things including the marginalisation of non believers in the science, spoke to Bob Carter and Ian Plimer by phone, and was quite surprised that these people were happy to talk to a layman like myself.

We are keen on protecting the environment without being unreasoning green fanatics. Adani has been through the mill with unbelievable conditions and safeguards but kids are funded to go to left wing conferences in Melbourne, just to learn how to protest against Adani.

****

Tucker, David. Vic

Builder, engineering, composites

I am sceptical of the climate scare because all I see and hear is bullshite. Man made yes, for their control

****

Tully, Brian Russell.

The school of hard knocks. Orchardist, property developer, real estate agent, company director and investor.

Sceptic:- It is another left wing, union way of destroying free enterprise in Australia and developing world government.

Thank you for the great job that you are doing. The stupidity of the whole climate change mess is alarming.

****

Turnbull, Darren John. NSW / Tweed Heads

Bachelor of Engineering, Master of Business Administration, Graduate Diploma of Information Technology, Diploma of Web Design, Diploma of Education, Information Systems Professional

Director of Studies, Ningbo City College, China, Instructor, College of the North Atlantic – Qatar. Instructor, British Columbia institute of Technology, Higher Colleges of Technology, UAE. Department of Defence, Australia, Department of Education, Papua New Guinea.

"Empirical data does not support the claims of United Nations backed climate-change advocates. The ultimate aim of the United Nations Convention on Climate Change is wealth redistribution and the erosion of the capacity of sovereign nations to legislate within their own borders".

Turner, Harry Peter. NSW / Sydney

BSc.,(Major Physical Chemistry) Dipl., American Management Assoc., Dipl., Logistics; Advanced Management Programmes: Universities of Houston, USA and IMIDEA.

Uni of NSW-Microbiology; CSIRO DIV of Fisheries and Oceanography; MSD Pharmceuticals (Prod. Mgr.); CIBA-Geigy Pharma (Plant Mgr) then Div. Mgr. of Function Technology and Member of Management Committee; Wellcome Pharma Operations Director and Board Member; PA Management Consultants.

Climate is a physical phenomenon; it is my area of scientific training and interest. 25 years ago I identified it as a chaotic and physical system. PREDICTIONS in such systems are impossible! But the IPCC did! Also the physical chemistry of CO2 can't have the properties that IPCC claim or Venus could not warm up when the sun rises. But it does!

In 25yrs I have compiled much evidence which is "peer reviewed". I watched Gerry Gleason on Alan Jones show recently. They posed many questions but couldn't answer them. I can!

****

Tyrrel, David.

Dip PM / CPPM (Certified Certified Practicing Project Manager) AMSA - International Marine Engineer (Motor) Certificate of Competency. Dip Eng (Marine) - Australian National Training Authority (ANU). Advanced Cert (Marine Engineering) – Hunter Institute Of Technology. Marine Engineering career in the Royal Australian Navy working in numerous ships as a Chief Engineer with my final posting being Staff Officer - Engineering Dept. of Defence Canberra.

"The global warming HOAX is causing massive damage to the Australian economy. Australia has about 30 percent of the world's coal and 40 percent

of the world's uranium which should be used to supply us with available, reliable & affordable power. To waste that advantage by the use of heavily subsidised renewable energy and a strict adherence to the Paris Agreement is a disaster that will simply cripple Australia (withdraw from the Paris Climate Agreement - NOW)"

****

Vains, Howard P. NSW / Cremorne

F Fin, FCPA, AGIA engaged in banking, stockbroking, property, insurance and pastoral property. Also politics - former Mayor of the Municipality of Ku-ring-gai in Sydney.

My simplistic view of climate change:-

The sun controls life on earth as we know it.

It seems obvious to me, that if the axis of planet earth changes in relation to the sun, then we would experience climate change. However, based on past scientific knowledge, the rate of weather change on earth is almost imperceptible to assess in a lifetime.

The climate change debate and many of the specious and theoretical calculations and arguments put forward, verge on or are ridiculous.

What we all should know, many fellow travellers in the climate change camp, have a vested interest in promoting the subject, either for financial and/or political gain.

If we all concentrated our attention on every day pollution in its many and varied forms, that would be an ideal, which should have the attention of any civic minded individual, wherever you live in the world.

****

Vance, John. Vic

Technical interests and hobbyist. Realist! Electrical Mining Self employed

The many attempts in Australia to deal with environments have seen a river changing course, feral animals being locked up in state forests, forest fires, hunts for imaginary foxes in Tasmania and many shenanigans that appear on the face of it to be scams to increase costs in everyday life.

These solutions are all impractical and if anyone can mention one scheme that actually worked I will donate one week of my pensions to them. The wind and solar power schemes are not viable to needed costly duplication of power schemes, but even those are at risk due to being gas and coal fired.

We have imbeciles being voted in, unfortunately in both parties...

****

Van der End, Alex. Vic / Mt Waverley

Worked in Law Enforcement, mainly in the Military Police as well as contractor for the Dept of Justice in Vic. Recently appointed Vic State Director of the newest conservative political party focused on state issues, the Conservative Coalition for Australia (www.CCfA.org.au).

I see that any attempts to affect climate change are a pointless waste of money. Nothing mankind can do will in any way prevent the 200+ active volcanos around the world undoing any changes that mankind makes. Therefore it makes no sense to spend billions on things that will drive up electricity prices and have no net benefit for citizens. That is just complete madness, and unless conservatives rise up and make a stand in Government, the lunatic left will destroy our economy and the future with high debt and unsecure, unreliable and expensive power.

****

van Gend, David. Qld / Toowoomba

MBBS (UQ), FRACGP, DipPalMed (Melb), Medical doctor in Queensland for thirty years. Writer on political and social issues.

The climate scare terrifies our children into hopelessness and helps corral the nations of the world into subservience to a transnational political order. It is less about the science of global warming and more about the politics of global governance. And all this despite there being nothing in the past century of climate data that falls outside the range of natural variation. This is a global political and quasi-religious movement more than science.

****

Vos, Richard. WA / Margaret River

Bsc Geology. BSc Honors, Geology. PhD Geology - sedimentology and stratigraphy. University of the Witwatersrand, lecturer in sedimentology and stratigraphy, Geological consultant, Libyan National Oil Company, Petroleum geologist / exploration manager, Phillips Petroleum Company - now ConocoPhillips.

The climate scare is a hysterical overreaction. Local and global climate change is a constant. Local and global sea level change is a constant. Carbon dioxide is the source of all life, so to demonise CO2 as a pollutant is absurd. We have more to fear from global cooling than global warming.

Developed western economies are rapidly bankrupting themselves by shifting to renewable energy / unaffordable electricity. That about sums it up, although these comments could expand into numerous volumes.

****

Vought, Graham. NSW / Newcastle

Electrical Fitter / Engineer, Certificate of Competency Underground Coal Mine Electrical Engineer, Certificate Training & Assessment, Diploma WHS, Advanced Dip WHS. Worked in Power Station and Mining Operations. Founder and Managing Director of two businesses providing mine machinery health & safety improvements, electrical engineering, project management & WHS consultancy services and leadership to the mining and construction industries.

After over 40 years of post school learning, working and paying hard earned taxes, communicating and consulting in the real world, with an open mind, you should develop an experienced and sensible perception of practical risk controls, as opposed to the perceived risk controls piled upon us by the global doomist lobby.

The great "man made climate change" panic is merely a convenient political football, best kicked way out of the park.

****

W. Rob. ACT / Canberra

RAN, University.

Rather than being 'sceptical', I am critical! The continued agenda that is pushed, that humans cause the heating/cooling of this planet, when in fact they have been naturally occurring cycles of warming and cooling, for millions of years, is likely the biggest fraud in human history!

All money that Australia has paid to this scam, is theft! We're effectively funding our own destruction! (by we're, that's the collective governments are funding our destruction, because as far as I can tell, there was no referendum ever held, to see if Australian citizens wanted to join the UN, or exit the UN, as is being demanded currently).

****

Wade, Michael. Qld / Gold Coast

QBE - Professional Music Producer/Composer/ Musician

I don't believe the Global Warming evidence.

****

Wallace-Smith, Hugh. Vic / Leopold

Stockbroker at Wallace H. Smith and Co; McIntosh Securities; Bell Potter Securities

The logic defied me as soon as Al Gore arrived. I see no historical correlation and I despise and hate the fear-mongering undertaken by the UN and anyone of the left.

I fear for those who believe in Global Warming and Climate change as it is a shocking indictment on their decision making ability on other issues, eg: the Banks (coal funding) and say Dr Phelps who makes decisions with her logic to cure patients in General Practice. Can you imagine.

****

Walter, Jim. NSW / Lennox Head

Doctor. I have a degree in pure science from Sydney university, and have drawn my own conclusions on the climate change issue. I also have a medical degree.

I heard an interview on the Alan Jones breakfast show, and we as a country are in desperate need of a viable force to oppose the prevailing forces in our parliament. In particular in the areas of human induced climate change, migration policy, what kids are being taught in our schools, and other important areas.

The left and the greens, as well as Get Up and the CFMEU, appear to be determined to absolutely wreck our country financially, and I am extremely concerned about the path that the unions are proposing for the Labour party concerning capital gains taxes, franking credits, renewable energy costs, and so on and on.

****

Ward, Steve. NSW / Nelson Bay

Engaged in Engineering/ Refrigeration/ air conditioning/ power generation/solar/ computing/ Aviation.

Why am I sceptical of the climate scare? I identified that the facts didn't line up when they outlawed CFC refrigerants.... I took more interest and I developed the opinion that Global warming theory is a religion. That said I DO believe that we should do all we can to cut our pollution! And I was an early adopter of Solar and now have approx 30kw of panels installed. Plus water tanks.

****

Warn, Robert C.

****

Watkins, Bryce Anthony. WA / Rockingham

Cabinet maker with a lot of interest in general overall knowledge and logic. Work history: 1 year Martial arts teaching. 6 years Cabinet making. 7 years mine worker, raise-boring.

I have personally seen the cost of combating so called climate change and have seen the brainwashing the left does of our children.

****

Webb, Jaclyn. WA / Pilbara
I don't really have any exceptional skills, other than enthusiasm to expose the farce that is climate change.

I work in the Pilbara, Wickham WA. I am a bus driver I am happy to follow instructions on ways that I can assist the organisation. EG research, emailing, printing, typing. I'm sure you get the picture.

****

Webster, Bob. NSW / Sydney

Fellow of the Institute of Chartered Accountants in Australia and NZ. Managing partner of medium sized firm of chartered accountants in Sydney's CBD for over 20 years.

I read widely on politics and watch politics on TV, I am probably a political junkie. Over the last few years in particular, I have come to the conclusion that climate change is promoted by the UN and other like minded bodies and people, with the object of redistributing money from developed countries to third world countries with the various measures employed having no discernible effect on the world's climate. In fact, I think it's the height of arrogance to think our actions can change the climate or affect the world's temperature, when the climate has been changing, and is always changing, for millions of years.

****

Weingarth, Chris. Qld / Maroochydore

Licensed Aircraft Maintenance Engineer - over 49 years in the aviation industry.

"I have been reading with great interest Viv's articles in the Pickering Post and have always agreed with them. This whole thing is entirely due to that foul smelling mob, the United Nations and their attempt to destabilise the world.

I am convinced that renewable energy projects will never provide enough reliable energy to meet the requirements of our country.

****

West, Craig. Qld / Charters Towers

Cattle industry 10 years then underground mining 28 years

History proves that the earth changes. Carbon has been higher. With a solar minimum coming, it's going to get cold.

****

Westmore, Ross. Vic

I can't believe in climate change lies when, on one hand there's countries like China & India, pumping millions of tonnes of CO2 in to the atmosphere on a monthly basis, more than what Australia has contributed in decades, and yet Australians are being crippled with growing energy costs, with further costs to be incurred should the Paris agreement be signed by the PM.

****

Weston, Gary. Vic

Self employed running own businesses

I am absolutely sceptical of the climate scare.

****

Whelan, Mark. WA / Perth
B.Sc. (Hons)Applied Geology, M.Sc. Palynology
32 Years in the oil & gas industry. Member of the Society of Petroleum Engineers
Fellow of the Geological Society.

As a geologist who has studied the past, nothing that is happening today bears any resemblance to a emergency or crisis, let alone an existential threat.

As a reservoir modeller (spatial and temporal changes of reservoir properties and the fluids that interact with them) who understands numerical simulation and all the issues that threat entails gives me a healthy scepticism of Climate Models

****

Whitelegg, Kieth

Dip CE .M.I.E.(Aust.), CPEng., R.P.E.Q. Professional Engineer, Senior Manager, Company Director and Business Owner in the civil engineering & mining industries throughout Australia, PNG, Indonesia, Pacific Islands & S.E. Asia. Projects incl. coal fired power stations, hydroelectric schemes, major mining infrastructure, dams, roads, bridges & tunnels.

Having visited almost 100 countries on the 7 Continents as well as reading extensively on the subject I have yet to find any definitive evidence to shows human CO2 emissions cause global warming. I therefore have major concerns that the so called "climate science " continually 'spruiked" by

climate alarmists is not ' REAL SCIENCE' but merely a "pseudo science" where selective statistics are extracted to suit political agendas & sensationalize lazy media reporting.

****

Whiteside, Bruce. Qld / Gold Coast

The University of Life - A painter and paperhanger for 50 years

I am sceptical of the climate scare because in the annals of time, changes have been going on continuously. Why in a snapshot of time does this generation now believe that their intellect have the answers - Man is not God.

****

Wickham, Paul. Vic / Newborough

Municipal Works Superintendent. Life time in Construction and maintaining State, Federal and Local Government assets, specialising in Bituminous products.

The climate is changing, of that there is no doubt, but it's a natural thing. Some 25 years ago my industry (Bituminous surfacing) was to be changed drastically from using hot 100% hydrocarbon products to a more environmentally friendly cold, water emulsified 60+% carbon based binder. Didn't happen, the new product won't cut the mustard, and it's a hell of a lot dearer.

I've also forced the ABC to remove any mention of the North Queensland bitumen melting story from being used to promote the warming scare. I've an email from them agreeing to that story being "unrepresentative of the facts."

****

Wilkerson, Trevor. WA

University of Life, Ex farmer

Global Warming is just another con by the UN to extract money from western nations with backing by The New World Order.

****

Wilkie, Don. WA / Margaret River

Many years of life! After National Service in the U.K., spent the next 25 years in the shipping industry - 20 years in Fremantle W.A.

Why am I sceptical of the climate scare? – I started off leaving it to the experts, but after being challenged to state "where I was" on the subject, did some reading and came to conclusion that it was a well-organised con - since then nothing has made me think otherwise.

****

Wilkinson, Julie. Qld / Tamborine

DipEd, Retired farmer/Teacher, Studied journalism.

The damage to our environment is caused by human population expansion and exploitation. To reduce destruction of our natural World we have to look at population caps. This is in conflict with our corporate World. We can't have more income, that Unions keep demanding, without having more profit and exploitation.

****

Wilkinson, Lyell Seton. NSW

Basic high school, retired farmer, business man , jack of all trades.

Why am I sceptical of the climate scare? - Science was one of my favourite subjects at school, if you know the science you know the truth.

****

Willcocks, Susie

Diploma of Financial Planning, and currently completing Law Degree. Company Director, Former State Manager Insurance NAB.

I deal in facts not conjecture, lies or falsehoods. The climate myth is the biggest moral panic the world has ever seen.

****

Williams, Rosalie Maree. Vic / Melbourne

Retired now but was self employed

Became sceptical years ago when talk was about "tipping point", then started my own research into earth's history.

****

Williams, Clint. Vic / Mildura

Farmer, tractor salesman, truckie, agricultural contractor, concerned citizen.

I've been around for a while and disagree with all the nonsense and scare mongering about CO2 and man-made climate change.

we were supposed to have rising sea levels, still waiting. we were supposed to never have our dams full or river floods again...wrong. we have had hotter summers but the BOM have massaged figures in records.

****

Williams, Dianne. Qld

B Teach; B. A. - Teacher of Latin; English and History

Why am I sceptical of the climate scare? Largely because the loudest voices are from the least qualified: Al Gore (going back 20 years); David Attenborough; Ross Garnaut; anyone put forward as a 'climate scientist'; while the likes of Ian Plimer are ignored or shut down.

****

Williams, Davydd. SA / Waikerie

Accountancy Management - Corporate governance; newspaper publisher; public administration.

True science welcomes challenges to scientific theory. Climate alarmism is not science, but religion.

****

Williams, Roger Dudley

Medical Practitioner, M.B.,B.S. (Syd), FRANZCO, FRACS. Ophthalmic Surgeon in private practice, Royal Flying Doctor Service (NSW Division) 1985-1995, Pacific Islands Project Aid Program 1995-1999, Visiting Medical Officer Royal Prince Alfred Hospital, Westmead Hospital.

All knowledge is provisional and ultimately based on empirical data and the scientific method - scepticism is at the heart of the scientific method.

I am sceptical of the climate scare because climate scare predictions constantly turn out to be wrong and are massaged without admission, poorly disguised opinions are clearly based on political considerations and unrelated to science, there is confusion of modelling predictions with data, the multitude of 'Climate Models' and their inability to be run in reverse and the massaging of previously recorded temperature data without apparent reason or explanation.

I have been sceptical since childhood and extensive reading over many years in science and history has amplified it.

****

Williams, Dennis. Qld / Brisbane

Automotive trade

I am sceptical of the climate scare because climate change is a political scam, follow the money.

The problem with global warming is that one side claims its settled, while the other side says it's not..... there are lots of clearly intelligent members of the science community arguing against it!

My stance on the subject and I'd guess the majority of "climate deniers" stance is simple.....we shouldn't be shutting down or fighting against energy sources like coal or oil, effectively putting people out of work and rocketing energy prices upwards, literally destroying people's lives, based on science that isn't even close to settled or fully understood.

When a "scientist" declares that "the science is settled," he has ceased to be a scientist and has become a cultist.

****

Wills, Don. Qld / Brisbane

50 years in transport logistics at managerial level.

Seasons fluctuate, sea ice recedes & grows, it's called the weather.

****

Wilson, Philip. Qld / Gold Coast

Journalist - most of it with the A.B.C.(!). Different in those days.

Concerned about the climate change propaganda smothering us(witness recent proclamation by David Attenborough plus demonstrations by school-children in Melbourne featured (naturally) on the A.B.C. and in a brief paragraph in The Australian. We need to fight back.

****

Wilson, Mark. Qld / Brisbane

Brisbane Boys' College, Hubbard's Academy. Australian Business of the Year (1989) and Young Manager of the year (AIM) 1991.

Fear has long been the bedrock of political and religious movements. Throughout history politicians and religious leaders have been in most demand when people are most fearful. Scared people turn to leaders for help, confident happy people do not.

The climate movement created the fear then offered up solutions. The fact that both are fictional and has been lost in the spin. It's a perfect storm, that needs to be exposed.

****

Wilson, Roger. Qld / Toowoomba

BSc Applied Science. Grazier. Broadacre Farmer. Environmental Officer for large Civil Construction projects.

I am sceptical of the climate scare through life long experience on the land, and a previous generation before me together with an interest in historical facts effecting primary production, inclusive of rainfall records, recorded droughts, recorded temperatures, recorded river flows, throughout recorded history within Australia.

****

Wilson, Lindsay. Vic

A lifetime experience in broad acre farming working successfully within the vagaries of the weather.

I am a disbeliever of Climate Change but fully aware of continual natural cyclical changes of weather patterns.

****

Winterflood, David. NSW / Laverstock

BA (Accounting), JP. Engaged in accounting, tax and LISC investment advice.

I am sceptical of the climate scare because everything I see about it comes across as a scam and hoax for the Club of Rome. Sierra and Davos and their apparent intent to cripple the world for their own profit and ignorance. Secret agenda. Just blame carbon, ignore water vapour. Very sad - I want to form a political party.

****

Wong, Adrian. WA / Perth

A civil engineer by training, having worked in state and federal governments (Drainage & Irrigation) in Malaysia and also in consultancy and development industry I came to Australia 31 years ago and still working in local government.

I am a sceptic about anthropogenic global warming. Climate is always changing caused by the sun. We should not subsidise renewables.

****

Harry Wood. Qld / Gold Coast

Real Estate Business owner.

Apart from the common sense fact that as we can't predict accurate weather tomorrow how can we do it in 100 years. If the Greens say something is good for us then the opposite is true.

****

Wright, Neville. Vic / Kilcunda

Systems Analyst and programmer - 42 years in IT, last 15 years with IBM on the biggest mainframe computers on the globe.

About ten years ago our local town Wonthaggi was selected for six (yes six) wind turbines as green window dressing for the ALP. I got involved with the group debating the eyesore and their value. I read everything about global warming ever written in the last ten years, it is the scam of the century, only a dumb electorate like Oz would fall for it. As soon as I noted CO2 was only 0.38% (and NOT increasing) of the green house blanket that keeps us from freezing to death I was hooked as a "denier".

****

Wynn, Randall. Qld / Cairns

Bachelor of Science (Geology and Mineralogy) with Honours , 1973, 74. Fellow of the Gemmological Society of Australia, 1978. Project Geologist with Mineral Deposits Ltd from 1974 - 1980, mineral sands exploration and mining, Senior Geologist with Gold Copper Exploration Ltd from 1981 - 1985, tin and tungsten mining and exploration together with base metal and gold exploration. Director of Henderson Charlton Ltd and subsequent iterations until the firm was acquired by Bell Potter Ltd. Since retiring I have pursued interests in gemmology, particularly Opal, and diverse investments to provide an income stream.

Nature is a very complex system. Man is a species of Nature - some people find this hard to accept, as such do people really believe that one species of nature, that has existed for roughly 150,000 years, can really control Nature and climate specifically? I doubt it.

****

Yuille, Ky. Vic

BA Business degree, Tourism industry

Over time I'm convinced climate change hysteria has got to stop. Most people who advocate 100 % 'renewables' are young and inexperienced in life. Russia USA, China and India produce most of the world emissions, yet they are not in the Paris agreement. (Russia will pull out of it soon) so why is Australia willing to be in it?

****
