

Cold and Hungry

by Viv Forbes,
Executive Director, The Saltbush Club, Australia.

7th May 2019

If human use of coal and oil is causing the Modern Warming, what caused the Minoan Warming, the Roman Warming and the Medieval Warming, all of which were warmer than today?

Every warm era was followed by a mini-ice age – a time of blizzards, iced rivers, starving stock, failed crops and hungry humans.

Only fools would try to kill the warmth by reducing aerial CO2 plant food.

Only idiots would destroy a cheap reliable electricity supply in this futile crusade.

Obviously Australia's parliaments are controlled by fools and idiots.

Viv Forbes is Executive Director the Saltbush Club which opposes the war on carbon energy, opposes real pollution, and promotes the rational and sustainable use of carbon energy and carbon food. He has no interests in or income from the coal, oil or gas industries, but has a big vested interest in having access to cheap reliable electricity (but just in case he has solar panels on his roof and a big diesel generator in the shed.)
