

A geologist's explanation of why nuclear power advocates should not use the - CO₂ is a pollutant argument.

Gregory Wrightstone

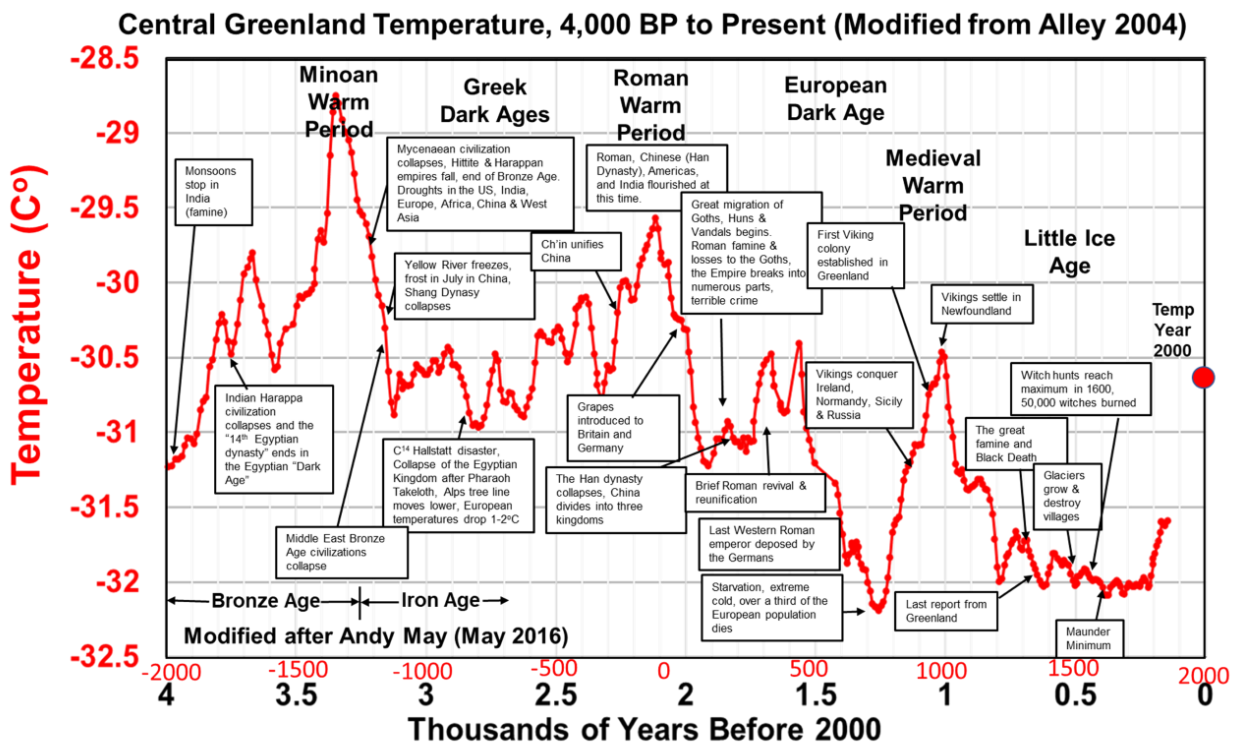

November 26, 2020

As a member of the CO₂ Coalition and incoming Exec Director, I reject blanket subsidies for nuclear generation using false climate change and CO₂-driven warming as the pretext for artificially propping up one energy form over another.

The modest warming of the last 100 or so years combined with increasing CO₂ is leading to an Earth and humanity that are thriving and prospering. It is just is. By nearly every metric. And we should all be thankful of that today.

If you want to advance nuclear energy, please don't use the same climate misinformation of the supposed dangers of increasing CO₂ that are used to advance the renewable energy scam.

Before climate "science" became politicized, the warm periods like today were called "climate optima" for a very good reason. Below, temperature and civilization from my upcoming book, you are seeing it here first. Fear the cold, welcome the warmth.

It is dangerous to be right in matters where established men are wrong.--- Voltaire

The world has improved tremendously because of the use of fossil fuels. Only fools/tyrants demand that we stop using them. Here are some examples of the beautiful world today.

Wildlife thriving in North America

New York City, USA with Central Park

Thanks to fossil fuels, the world produces more wonderful food than it needs. The problems are government corruption, distribution, and regional wars.

When I despair, I remember that all through history the ways of truth and love have always won. There have been tyrants, and murderers, and for a time they can seem invincible, but in the end they always fall. Think of it--always.

(Mahatma Gandhi)
