

## The Last COP-Out

For 26 futile years, the net-zero maniacs have wasted fuel, energy and taxpayer's money to bite the hands that provide their food, energy, welfare and public sector jobs.

Led by EU and AUKUS dreamers, they destroy reliable energy from coal, oil, nuclear, gas and hydro while forcing us to subsidise net-negative dreams like solar, wind, wave-power, CCUS, hot rocks, pumped hydro and hydrogen. All such speculative ventures should be funded by speculators.

COP-Out-26 illustrates to the realists of China, Russia, India and Brazil that the West has lost its marbles and is in terminal decline. For Scott Morrison to surrender Australia to these green wolves betrays an army of miners, farmers, truckies and workers in primary, secondary and tertiary industries that support him and his Canberra pack.

The fakery of COP-Out-26 is well illustrated by the provision of diesel generators to recharge the batteries of 26 electric cars provided for show in Glasgow. But that's OK "because the diesels are run on recycled chip fat". Horses and covered wagons would be more reliable and appropriate and dried horse manure could cook their fake meat on their green, chip-fired barbeques.

Neither EU nor AUKUS green dreamers can run their world on energy plans drafted by neurotic school girls, clueless Princes, deluded accountants like Ross Garnaut or serial climate alarmists like David Attenborough.

China loves Net-Zero, using its growing coal power to manufacture the wind turbines, solar panels, electric engines and rare earth batteries for the Woke-World.

But the subsidy tap feeding green energy development in the Western world will run dry. Fake energy will fade away leaving a continent of jobless people with silent mills, refineries and factories. Our land will be littered with derelict windmills, decaying solar panels, dead batteries and sagging transmission lines to be cleaned up in order to restore our land to productive grasslands, crops and forests. Those huge concrete bases of abandoned wind towers will become permanent obstacles to restoration of this land.

Next we will see digital carbon-credit cards designed by green academics to ration our energy and food usage to achieve their Net-Zero Nirvana.

A bleak future beckons.

Scott Morrison and his team should boycott this final futile COP-Out-26.

Barnaby Joyce should hang his head in shame – I know that he knows better.
